Prof. Ridgeway, in reply to Dr. Farnell, pointed out that he had carefully confined his doctrine to the Great Games, which he had enumerated in his summary. Of course there were plenty of races, &c., in Greece not connected with funerals. Prof. Frazer had laid great stress on the four-year cycle as a difficulty in the funeral origin of the games, but Prof. Ridgeway pointed out that the astronomical cycles, such as the Metonic, were late, and may have come in with the remaking of the games, which must have existed long before B.C. 776 at Olympia and B.C. 685 at Delphi. The Hymn to Demeter distinctly regards barley at Eleusis as antecedent to Demeter worship there. Naturally no mention is made in the Hymn of games to Triptolemus, for the hymn is not in his honour, but that of the goddess. The hero, however, stands first in all the enumerations of the local chiefs.

THE MAURICE KANN COLLECTION.

THE MAURICE KANN SALE, which will be held at the Galerie Georges Petit, Paris, by MM. Lair-Dubreuil and Henri Baudoin, on June 5th and four following days, is likely to prove the great event of the season of art sales in Paris.

Maurice Kann, who died on May 6th, 1906, a year or so after his more famous brother Rodolphe Kann, was one of three remarkable brothers, all collectors of the first rank, and all Germans who settled in Paris. Max Kann's collection was dispersed in 1879. That of Rodolphe Kann—by far the most important of the three—was purchased *en bloc* by Messrs. Duveen in association with a French firm in 1907. Two years later it was announced that Messrs. Duveen had purchased an important selection of objects from the collection of Maurice Kann, consisting of eleven pictures (four Rembrandts, a Cuypp, two by Jacob Ruysdael, Reynolds's portrait of Lady Taylor, and others), eight fine decorative panels by Boucher painted for Madame de Pompadour, a collection of majolica, Limoges enamel (including the Spitzer portrait of the Duc de Nevers), 150 gold snuff-boxes, and a marble bust attributed to Donatello. The price paid was not revealed at the time, but I am informed that it was about 1,000,000 francs.

Whilst this sale of two years ago has undoubtedly removed from the collection much of its importance, there remains sufficient to stamp it as one of the highest consequence. The 82 pictures are all important, and many have passed through English sales. A companion pair of portraits by Jan de Bray, both dated 1668, came from the well-known collection of the Comte André Mniszech. The three Brouwers were all reproduced in the monograph on that artist by F. Schmidt Degener. Chardin's 'Le Déjeuner' was exhibited at the Guildhall in 1902, and appeared in the Vaile Sale of the following year. Both groups of portraits by Gonzales Coques are described in Smith's 'Catalogue Raisonné.' One of these, 'The Duet,' was bought from Brand by Mr. Chaplin in 1840, and, after passing through the Higginson of Saltmarshes, Brooks, and Wynn Ellis collections, was purchased at the Wardell Sale at Messrs. Christie's in 1879 by Lord Powerscourt. The second group by this artist (Smith, No. 33) was in the Salamanca Sale in 1867, and was exhibited at Brussels last year.

The most important of the six by Cuypp, the 'Départ pour la Chasse' (Smith, No. 150), has a long English record; it was in the Lapeyrière Sale of 1825, and was one of the many fine pictures brought to this country by that excellent judge M. Delahante; this picture belonged successively to T. Emerson, Richard Sanderson, M.P., and Mr. Lyne Stephens, at whose sale in 1895 it was bought by the late Charles Wertheimer for 2,000 guineas. The four Van Dycks are, with one exception, described by Smith, but only one appears to have been in an English collection—a head of a man which sold for an insignificant price in 1882. The chief example of this artist seems to be 'The Descent from the Cross' (Smith, No. 413), which was badly engraved by Zucchi when it was in the collection of the Elector of Saxony, and was exhibited in Paris in 1874. The half-length figure of St. James (Smith's Supplement, No. 123) was sold by Smith to M. Noé of Munich in 1836. An unrecorded Frans Hals, portrait of a young man, is dated 1634. The Lawrence portrait of Miss Glover of Bath is not recorded in Lord Ronald Gower's book.

Adrian Ostade's 'Concert' (Smith's Supplement, No. 112) was in the Adrian Hope Sale of 1894.

Some of the seven portraits by Sir Henry Raeburn have appeared at Messrs. Christie's: two were in the Affleck Fraser Sale of 1897; that of James Cruikshank was presumably the portrait of a Mr. Cruikshank in the possession of a Bond Street firm of dealers in 1904. One or two others, *i.e.* James Hepburn and J. A. Macdonnell Bonar, appear to be unrecorded. Three of the four Romney portraits are of unknown men, and the fourth is the early portrait of P. C. Methuen.

Of the seven by Jacob Ruysdael, two have passed through English collections; a third belonged to Max Kann, and, after passing through three other collections (in one of which it sold for 28,600 francs), was obtained by the late owner from Prince Liechtenstein of Vienna. Salomon Ruysdael is also represented by six examples, all signed and mostly dated.

Seven examples of Jan Stein lead off with 'La Nœce,' which belonged successively to Lord Charles Townshend, William Wells of Redleaf, and Mr. Nieuwenhuys, the eminent expert, at whose sale in 1886 it realized a small sum; two others by this artist have been in English collections. So, too, have the two pictures by David Teniers the younger. 'Le Couronnement d'Épines' (Smith, No. 140) passed from the Prince de Canino's collection into that of Lord Dudley, in whose sale in 1892 it was included. 'Le Cellier,' also by Teniers, came from the Wells of Redleaf collection. Wouverman's picture 'The Restive Horse' has figured in several important collections, English as well as French and Dutch.

W. ROBERTS.

PICTURE SALES.

MESSRS. CHRISTIE sold on Monday last the following pictures: J. Buxton Knight, A Shepherd's Hillside Cot, 294*l.* H. H. La Thangue, Leaving Home, 262*l.* L. L'Hermitte, La Moisson, in the centre a labourer standing with his scythe, resting from his work; before him kneels a woman, tying up a sheaf, 1,522*l.*; Le Cabaret, the interior of a country inn, with a peasant seated at a table, holding in his left hand a spade, and in his right a glass, into which a woman is pouring some wine out of a tankard, 1,102*l.* E. Verboeckhoven, Ewes, Lambs, and Poultry, in a Barn, 210*l.* A drawing by A. Mauve, Winter, a road with a peasant woman and some old cottages, fetched 189*l.*

At Christie's on the 11th inst. W. van Aelst's picture A Bunch of Flowers, in a silver vase on a marble slab, brought 294*l.*

SALE OF ENGRAVINGS.

AMONG Col. Montagu's engravings, which Messrs. Sotheby sold on the 10th inst. and two following days, were the following important prints: Miss Farren, by F. Bartolozzi, after Lawrence, printed in colours, 500*l.* Mrs. Musters, by J. Walker, after Romney, 84*l.* Lady Elizabeth Compton, by J. R. Smith, after the Rev. W. Peters, 160*l.* Elizabeth, Countess of Mexborough, by W. Ward, after Hoppner, 230*l.*

Fine Art Gossip.

At the unveiling of the Memorial to Queen Victoria on Tuesday last the sculptor, Mr. Thomas Brock, was knighted.

On Tuesday, the 9th inst., a tablet was unveiled in the Royal Scottish Academy buildings to commemorate the services of the President Sir James Guthrie in carrying

through the series of negotiations which have resulted in the transference of the Academy from its former home. A bronze relief, the work of Mr. Alfred Gilbert, was also presented to him. Sir James in the course of his reply made graceful reference to their secretary Mr. McKay.

IN addition to the presentation to Sir James Guthrie, the opening of the new premises was celebrated on Friday, the 12th inst., by a banquet in the principal room of the exhibition. Sir James Guthrie presided, and Lord Pentland proposed the toast of the Academy. The gathering was picturesque, as the President and Council wore their new official robes for the first time.

A RESOLUTION in favour of the Sunday opening of the picture galleries of the Fitzwilliam Museum passed the Senate of Cambridge University last week by the narrow majority of three. The Museum was open last Sunday afternoon for the first time, and there was a large attendance. The same step was taken at the Ashmolean Museum in January of this year.

THE choice collection of modern pictures, water-colour drawings, and pastels formed by the late J. de Kuyper of the Hague will be sold on the 30th inst. by Messrs. F. Muller & Co., of Amsterdam. For over thirty years the collection has been well known to art visitors to the Hague, and the sale is one of the most important of its kind ever held in Holland. French art from 1830 down to our own day is particularly well represented.

M. HENRI E. A. E. HARO, who has just died in Paris at the age of 56, was the grandson and brother of three eminent experts, under whose charge important sales have been held in Paris for many years past. M. Haro was not only an expert similarly employed, but also an artist, and on numerous occasions exhibited portraits and flower pictures at the Salon.

THE American *Fine Arts Journal* publishes a collection of articles, with numerous reproductions, under the general title of 'The Iwill Reprint.' This reprint is a souvenir of the recent exhibitions held in America of the works of the well-known French artist "M. M. J. Iwill." One of his pastels, 'Avant l'Orage,' 1891, is in the Luxembourg. M. Iwill's real name is Clanel, and when in 1875 he sent his first picture to the Salon, without the consent of his father, he signed it with the two English words "I will," an indication of his fixed determination to become an artist.

A COLLECTOR writes:—

"There has just passed away an old-fashioned printseller born in 1828. He died at 14, King Street, Covent Garden, the scene of his labours for the last 50 years. His name was Henry Fawcett, and as one of the last (if not the last) of his customers, I add this tribute to his memory. He had the old-fashioned charm of manner, dress, appearance, and dealing, and bore the troubles of his later days calmly and philosophically. Out of the window of the old back-parlour he looked on the graveyard now his last resting-place, and many a time have I sat there with him, listening to his tales of old times and the many famous collectors who frequented his shop. He was a great judge of prints, and had special knowledge of the work of Dürer and Rembrandt, and much pleasure and profitable knowledge I derived from him."

Two reliefs in Kehlheim stone have recently been presented to the Kunsthistorisches Museum at Vienna: an equestrian portrait of the Emperor Maximilian

by Hans Daucher, and a 'Susanna' by Georg Schweigger. Both were formerly in the Lanna Collection.

DR. W. BOMBE, the well-known German writer, contributes to the *Cicerone* (Heft 9) the following notes from Italy. A fresco by a Sienese master of the Trecento has come to light in the Church of San Donato in the Piazza della Badia, Siena. It represents the Madonna and Child enthroned, and was hidden by an eighteenth-century painting on canvas.

THE 'Madonna and Saints' of the workshop of Ghirlandaio—the altarpiece of the church of S. Maria al Fortino at S. Miniato al Tedesco—is now being restored by Prof. Fiscoli.

SEVERAL interesting paintings have been placed in the large Refectory of S. Appollonia at Florence, including Andrea del Castagno's frescoes from the Villa Pandolfini and the fragments recently discovered, a Pietà by the same painter, and another by Paolo Badaloni, called Schiavo. A. del Castagno's early work, the 'Crucifixion,' formerly in S. Maria degli Angioli, and lately in the Uffizi, has also been placed with the other works in S. Appollonia. By the removal of the partition wall, the Refectory has now been restored very much to its original condition.

THE SENEFELDER CLUB has met with a remarkable response to its attempt to spread an interest in artistic lithography throughout England. Besides the selections of lithographs already sent to Bradford and Birmingham, the Club has furnished a collection for a special exhibition arranged by the Corporation of Worcester, and has sent, by invitation, a large representation to the show of modern art now gathered in the City Art Gallery, Leeds.

THE CORPORATION OF MANCHESTER is organizing an exhibition of past and present lithographic art on an important scale, of which the control has been given to the Senefelder Club. In the autumn a special collection of the latest work of the Club will be seen, on the invitation of the City of Liverpool, at the Walker Art Gallery.

THE fact of three works by Sir Thomas Lawrence coming under the hammer in one day should draw considerable attention to Messrs. Knight, Frank & Rutley's sale next Friday. All three are portraits of beautiful women which have remained in the possession of the Upton family down to the present day.

AMONG the articles in *The Antiquary* for June will be a short discussion of 'Hittite Sculpture and Italian Portals,' by Mr. J. Tavenor-Perry; the first parts of an account of 'All Saints' Church, Milford-on-Sea, Hants,' by Mr. W. Ravenscroft, and of a study of 'Monastic Library Catalogues and Inventories,' by Mr. T. W. Huck; and a brief paper on 'The Filling-in of the Eastern Ditch at Oliver's Camp near Devizes,' by Mr. A. F. Major.

EXHIBITIONS.

- SAT. (May 20).—Mr. Andrew F. Affleck's Drawings, Messrs. Connell's Gallery.
 — Etchings in Colour, Facsimiles of Miniatures, Old Masters, &c., Mr. F. Hanfstaengl's Gallery.
 — Mr. Philip A. László's Portraits, Messrs. Agnew's Gallery.
 — Mr. Frank Lishman's Water-Colours of London, and English and Italian Sketches, 12, Gray's Inn Square.
 — Nineteen Club Exhibition, Mount Street Galleries.
 — Paintings and Drawings by Mr. James Pryde, and Paintings by Mr. Edgar Seligman, Baillie Gallery.
 — Pictures by French and Dutch Masters of the Nineteenth Century, Private View, Messrs. Obach's Gallery.
 — Miss Heriot Ronaldson's Water-Colours, 'Gardens and Landscapes,' Modern Gallery.
 MON. Alexander Fisher's Gold and Silver Work, Bronzes, Enamels, and Jewellery, 34, Queen Anne's Gate, S.W.
 TUES. Miss Maud Button's Small Pictures, 'At Home and Abroad,' Private View, St. George's Gallery.
 FRI. Miss Rowley Leggett's Oil Paintings, Press View, Alpine Club, Mill Street, W.

MUSIC

THE WEEK.

COVENT GARDEN. — *Madama Butterfly*.
Aida.

PUCCINI'S 'Madama Butterfly' was given on Friday in last week. The continued success of this and other operas of the composer is partly due to his gift of writing beautiful melody and to his skilful and often extremely delicate orchestration, but much also is due to the dramas on which his libretti are based. There are certainly exciting moments in Wagner's 'Ring,' but there are many passages in which interest, at any rate with the general public, flags. That, however, is so little the case with Puccini that the dramatic interest is equal to the musical, and at times even greater. In this, indeed, lies the characteristic difference between the old and the new school of Italian opera.

The performance yesterday week was excellent, and the disappearance of the intoxicated uncle was a decided improvement. Mlle. Destinn is the best impersonator of the Japanese maiden. Madame Giachetti was a fine actress, but, although she sang artistically, her voice was somewhat worn. Signor Bassi and Signor Sammarco, as Pinkerton and Sharpless, were most satisfactory. The part of Suzuki was taken by Mlle. Schartz, who has a voice of good quality.

On Tuesday 'Aida' was presented for the first time this season. Mlle. Destinn and Madame Kirkby Lunn, the Aida and Amneris, were at their best. Signor Bassi proved efficient as Radames, while M. Gilly, a new-comer, as Amonasro created a very favourable impression. The whole performance was, indeed, excellent, and the choral singing refined. Both operas were given under the direction of Signor Campanini.

CRYSTAL PALACE.—*Empire Concert*.

THE programme of the Empire Concert at the Crystal Palace yesterday week was devoted to British music. Dr. Charles Harris, who planned and organized the Empire Festival of Peace, was represented by his bright and tuneful 'Imperial Greeting,' 'Empire of the Sea.' Owing to the limited time, only works of short compass by Sirs Hubert Parry, Charles Stanford, and Edward Elgar could be given. These were the 'Orestes' march, two of the 'Songs of the Sea,' and 'Land of Hope and Glory' and Epilogue and March from 'Banner of St. George' respectively. A Purcell Suite arranged by Sir Henry J. Wood by selecting movements from various works of the composer, though well rendered under Sir Henry's direction, was more suitable for

an ordinary concert-room; but at least it was the means of recalling the greatest English composer of the seventeenth century. The solo vocalists were Madame Clara Butt and Mr. Thorpe Bates. The gigantic Imperial Choir sang splendidly. The orchestra was composed of the Queen's Hall and the London Symphony Orchestras. It was not a concert which calls for criticism, but it deserves note owing to the prominence given to native art.

Musical Gossip.

IT is difficult to do justice even to a few of the many concerts of the last few days. Madame Jomelli, the Dutch contralto, who gave her second recital yesterday week at Bechstein Hall, has a fine voice, good style, and temperament. Herr Ernest van Dyck, well known as a stage singer, gave his second recital in the same hall on Monday afternoon. In three excerpts from 'Rheingold,' 'Die Walküre,' and 'Siegfried' he sang, or rather declaimed, with dramatic power; but in these, and less appropriately in some genuine Lieder, he was often far too strenuous.

AT Queen's Hall on Monday evening an admirable performance of Weber's 'Der Freischütz' Overture was given by the London Symphony Orchestra under the direction of Herr Arthur Nikisch; and Mr Ernest Schelling rendered the solo part of M. Paderewski's early Pianoforte Concerto in A, Op. 17, in a masterly manner. The programme also included Mr. Holbrooke's clever Tone Poem, 'Queen Mab,' and Tchaikowsky's E minor Symphony.

M. PADEREWSKI announces a pianoforte recital at Queen's Hall on the afternoon of June 14th.

MR. THOMAS BEECHAM will give a "Delius" concert on June 16th at the same place. The programme includes 'Appalachia,' the Symphonic Poem 'Paris,' Entr'acte from 'The Village Romeo and Juliet,' the Orchestral Fantasy 'In a Summer Garden,' and 'Songs of Sunset,' a cycle for soprano and baritone solo, chorus, and orchestra.

AT the Sir Charles Santley Matinée next Tuesday at the Opera House, Covent Garden, the programme will include a portion of the first act of 'Samson et Dalila,' with M. Darmel, a new French tenor, and Madame Kirkby Lunn; and an act from the 'Beethoven' of M. René Fauchois, freely translated by Mr. Louis N. Parker, produced by Sir Herbert Tree in November, 1909. Sir Herbert will be assisted by Miss Hilda Anthony and Mr. Henry Ainley. Madame Adeline Genée will appear in 'The Dryad,' by Madame Dora Bright. Miss Maggie Teyte and other ladies, also Mr. Ben Davies and Mr. Harry Lauder, have promised their assistance. Sir Charles Santley will, as first announced, appear as Tom Tug in Dibdin's 'The Waterman.'

THE first performance in London of Puccini's 'The Girl of the Golden West' is expected to take place next Thursday. Mlle. Destinn and Signor Bassi will impersonate Minnie and Dick, the principal *dramatis personæ*, but the whole cast is strong. Signor Campanini will conduct.

WE have received from Messrs. Novello a copy of the Form and Order of the Service to be performed and of the Ceremonies to be observed in the Coronation of King George V. and Queen Mary, together with the music to be sung, edited by Sir Frederick Bridge. They have also sent a full score of Sir Edward Elgar's Second Symphony, to be produced next Wednesday at the London Festival.

EMIL MLYNARSKI'S 'Polonia' Symphony will be performed under the composer's direction, and for the first time in London, at a special concert to be given by the London Symphony Orchestra at Queen's Hall next Friday afternoon.

At the forthcoming International Musical Congress (May 29th to June 3rd) papers will be read by seventy-seven lecturers in the buildings of the University of London, South Kensington. Of these, sixty-four from abroad include the following well-known names: Prof. Adler, Prof. Andersson, Cav. Barini, Dr. Buchmeyer, Dr. Écorcheville, Privy Counsellor Friedländer, Dr. Hugo Goldschmidt, Baron Kraus, Dr. Krohn, M. Laurencie, Dr. Scheurleer, Prof. Seiffert, Mr. Sonneck, Prof. Stanley, and Prof. Joh. Wolf.

PERFORMANCES NEXT WEEK.

SUN.	Concert, 3.30, Albert Hall.
—	National Sunday League Concerts, 3.30, Queen's Hall; 7, Palladium.
MON.-SAT.	Royal Opera, Covent Garden.
MON.	Yvette Guilbert, 3, Bechstein Hall.
—	Mr. George Mackenzie's Brahms Concert, 3.15, Æolian Hall.
—	Prof. Petchnikoff's Violin Recital, 8.15, Bechstein Hall.
—	Mr. Ivor Warren and Mr. Hugo Oushoorn's Song and 'Cello Recital, 8.15, Æolian Hall.
—	London Musical Festival, 8.30, Queen's Hall.
TUES.	Sir Charles Santley's Benefit Concert, 1.30, Covent Garden.
—	London Musical Festival, 3, Queen's Hall.
—	Miss Lilla Ormond's Vocal Recital, 3, Bechstein Hall.
—	Miss Auriol Jones and Miss Beatrice Eveline's Piano and 'Cello Recital, 8.15, Æolian Hall.
—	Mr. Huberman's Orchestral Concert, 8.15, Queen's Hall.
—	Mr. Jules Wertheim and Dr. Barjansky's Recital, 8.15, Bechstein Hall.
WED.	Mr. Raymond Roze's Concert, 2, Queen's Hall.
—	Mr. Leon Rains's Vocal Recital, 3.15, Bechstein Hall.
—	Mr. Frank Leibich's Concert, 8.15, Æolian Hall.
—	Miss Lissmann's Vocal Recital, 8.15, Bechstein Hall.
—	London Musical Festival, 8.30, Queen's Hall.
THURS.	London Musical Festival, 3, Queen's Hall.
—	Mr. Sigmund Beel's Violin Recital, 3.15, Bechstein Hall.
—	Mr. Brabazon Lowther's Vocal Recital, 3.15, Æolian Hall.
—	Miss Joan Sutherland's Orchestral Concert, 8, Queen's Hall.
—	Miss Stella Ritchie's Pianoforte Recital, 8.30, Æolian Hall.
FRI.	Bechstein Hall Orchestra, 3, Bechstein Hall.
—	Mr. Mlynarski's Orchestral Concert, 3, Queen's Hall.
—	Miles Yonne Astruc and Sanderson de Crowe's Violin and Vocal Recital, 3.15, Æolian Hall.
—	The Woltman Ladies' Orchestra, 8, Bechstein Hall.
—	London Musical Festival, 8.15, Queen's Hall.
SAT.	Mr. Wright Symon's Vocal Recital, 8.15, Æolian Hall.
—	London Musical Festival, 12 o'clock, Queen's Hall.
—	Godowsky and Gerardy's Beethoven Concert, 3, Bechstein Hall.
—	Madame Melba's Coronation Concert, 3, Albert Hall.
—	Mr. J. B. McEwen's Concert of Original Compositions, 3.15, Steinway Hall.
—	Mr. Norman Wilk's Pianoforte Recital, 3.15, Æolian Hall.
—	Miss Fox Reeve's Concert, 8, Bechstein Hall.
—	Miss Fanny Davies and Pablo Casals's Pianoforte and 'Cello Recital, 8.15, Æolian Hall.

DRAMA

THE WEEK.

CORONET.—*The Taming of the Shrew.*

THE vivacity which has been such a feature of the stock company's acting at the Coronet is as conspicuous in the third as in previous Shakesperian revivals. But this time it is not Miss Alice Crawford to whom the honours fall, but her young associate, Mr. Frederic Worlock, and his record for the series stands somewhat as follows: good as Orlando, better still as Benedick, best of all as Petruchio. Obviously Mr. Worlock has a keen sense

of humour, and that has been piquantly brought out as the tone of the programme has changed from pastoral to comedy, and from comedy to farce. But he has also shown week by week an increasing breadth of style and command of the stage. A little shy as Rosalind's lover, and somewhat too conscious of his height as Benedick, he absolutely forgets himself in 'The Taming of the Shrew,' and carries through the tamer's scenes with exhilarating pace and gusto. The crack of the whip and the horseplay consecrated by tradition form part and parcel of his as of every Petruchio's "business," but there is good humour about his reading of the character with a welcome lack of extravagance. It would have been interesting to see what Mr. Worlock would have made out of the drolleries of Christopher Sly, a character which Mr. Oscar Asche in his revival doubled with that of the Petruchio; but Mr. Arthur has suppressed the 'Induction' in his acting version of the play.

Miss Crawford is for once responsible for a rather disappointing performance. As Katherine she gives intimations—by the smile, for instance, which she throws more than once to her audience, as if to ask them not to take her displays of temper too literally—that the part she is playing is against the grain. Such hints are unnecessary, for it is pretty patent that the challenge of sex or the surrender to sex is her forte, not sex-defiance. The moment she gets off her stilts—thus in the scene of the shrew's final breakdown, or again in her offensively meek harangue of her sister-brides—this Katherine makes an instant appeal; but her sulks, her tantrums, her virago-like moods, fail to carry conviction.

Good work, it should be added, is done by Mr. Clifton Alderson, the Baptista, and Mr. Sargent and Mr. Brewer; and Miss Dulcie Greatwich, though thrown away in the part, proves an engaging Curtis. The company should agree to preserve uniformity in the pronunciation of Petruchio's name.

NEW THEATRE (MATINÉES).—*As You Like It.*

OUR stage may be said of late to have collected nearly all the more promising of its girl recruits from the children of well-known players. A case is that of Miss Phyllis Neilson-Terry. She started her career with the advantages her parents' popularity supplied, but from the first gave signs of an inherited talent. Her Viola showed a year or so ago that she had the makings of a Shakesperian actress, and the impression is strengthened now that she has attempted the more trying part of Rosalind. Some day it will be possible to speak of her work without that indulgence which youth commands.

It would be idle, however, to say that her performance at present can bear rigorous criticism, and the applause rather too recklessly awarded by a friendly

audience must not mislead her into supposing that she is able as yet to express the moods and character of Rosalind. The charm of the young is hers; she is agreeably lacking in self-consciousness, and wears doublet and hose without emphasizing her sex inartistically; she has an air of refinement and a sense of poetry; she takes an obvious enjoyment in the heroine's masquerade; and when her age is considered, she exhibits a considerable command of diction. But she plays her scenes individually without much regard to any general conception, and there is not enough warm blood in her acting—indeed, for the most part, it is just acting, that and nothing more. She finds the business of make-believe great fun, but it is rarely that her high spirits develop into anything like intensity, and she misses the subtler feminine traits of the Ganymede of Arden. She is more boy-girl than girl-boy, and her gait and poses now and then have a boyish awkwardness. She lacks as yet colour and temperament for the part—there her mother's Rosalind could have taught her much; and these things apart, she requires training; her voice is not capable so far of variety of effect or sustained power. To declare, as might be declared, that her happiest moment is her singing of the—interpolated—"cuckoo" song sufficiently indicates how much she stands in need of experience. Her Rosalind is pleasant to watch, as suggesting just what youthful talent, an undoubted vocation for the stage, and a girl's pretty idealism can do for a part which, alas! our actresses seem only to compass when they have left girlhood behind them.

Some of her support is very good. The Orlando, Mr. Vernon Steel, is manly and picturesque, and adds to the attractiveness of youth a genuine sense of style. The Celia of Miss Miriam Lewes has fluency of speech, and is carefully characterized; and the Touchstone of Mr. Arthur Williams is in the very best manner of the old school, humorous as it were by instinct, and without the smallest trace of exaggeration. But Mr. Kendrick somehow misses fire as Jacques in the "Seven Ages" monologue, his declamation here comparing unfavourably with the fine effort of Mr. Clifton Alderson at the Coronet; and there are certain misfits in minor parts. In fact, in more than one respect Mr. Robert Arthur's production could give points to this at the New Theatre.

Rachel: her Stage Life and her Real Life. By Francis Gribble. (Chapman & Hall.)—Any biography of Rachel must be, from the very circumstances of her career, the record of a great actress's race with time. Rather too calculating and egotistical a personality to win sympathy on her own account, she yet compels pathos by the spectacle of genius housed in too frail a tabernacle of flesh. Born in 1820 or the following year, she made her début at the House of Molière in 1838, and almost at once leapt into fame.

Her success made important history on the Paris stage. This slip of a girl, as she then was, Jewess by birth, daughter of a vagabond hawker and an old-clothes saleswoman, illiterate to such an extent that she had to be coached in the manner of accepting invitations to dinner and other social engagements, was actually and almost solely responsible for the setting-back of the Romantic movement in the theatre, and the salvation of the classic drama of France at the moment when it seemed doomed to eclipse. Racine and the old school had found their interpreter, and from that moment till the last year or so of her life she had the world at her feet. Emperors and queens loaded her with compliments and jewels, and she made what were little short of triumphal progresses through Europe. Only towards the end did she ever meet with a rival of serious pretensions, and her deposition at the hands of Ristori was due rather to her own physical collapse than to any decline in her talent, or superiority on the part of her competitor. Rachel had only ill-health to fear, but that fear was ever present. Almost from the very day that she conquered Paris at the Comédie Française she felt behind her the chill shadow of death. Later she never played the death-scene in 'Adrienne Lecouvreur' without having an uneasy suspicion that therein was typified her own fate.

Her apprehensions were well-founded, for she died at the early age of thirty-seven. Having acted before Queen Victoria at Windsor Castle and been fêted through tours of Germany and Russia, she tried, at a time when warnings of nature and discontent in Paris should have taught her to husband her resources, a still more ambitious and adventurous flight. She started, just a few years too early, a tour in the United States, and it proved a dreadful fiasco. Perhaps disappointment left her more susceptible to the series of chills which she caught during her long journeys. The chills set up a galloping consumption, and so came about the premature close of her career. Ever trying to keep ahead of her phantom pursuer, Rachel may be said to have crowded into the few years allotted her the work and the sensations of a lifetime, and it is her eager clutches at experience, her piteous attempts to outpace the calendar, which form the motive of Mr. Gribble's just and vivacious biography.

It will be noticed that in the title of his book the author draws a distinction between the "stage life" and the "real life" of his heroine, and indeed much of his space is occupied in pointing the contrast. He is no believer in the doctrine that the actor's is a creative art, in the strict sense of the words, and he argues that it is a mistake to credit even a histrionic genius with the emotional sensibility of this or that part; what he or she does possess is a sufficiently rare gift—the gift of expression; but popular admiration so exaggerates and misunderstands this that the stage artist is led to attach an excessive importance to his or her function. By way of illustrating his text Mr. Gribble reminds us how far from sublime was Rachel when not served by the glamour of the footlights—how she failed to adapt her manners to the atmosphere of success, how she spoilt her social chances by her tactlessness and vulgarity, how in her hunt after pleasure and sensation she missed much—missed, it is obvious, the higher kind of love altogether—through over-caution and a keenness about wealth and creature-comforts. In this sense Mr. Gribble claims—no doubt justly—that his memoir is edifying. He takes up no Puritan pose; he does not think it necessary to moralize

over the complacency Rachel showed to a succession of wooers; the mere recital of facts tells its own tale.

Certainly the great French actress does not appear to advantage in her sentimental adventures. There was little pride in her response to the Orleans sailor-prince's advances; mere vanity and self-seeking were at the back of the game of pretence she played with Alfred de Musset; and it was for the sake of luxury that she accepted the protection of that son of Napoleon whom she might have married but for her lack of discretion. She had her English admirers too, of whom we know more than the author.

More attractive is the Rachel of early days—the child who slept on a barrow and hawked flowers, and danced and declaimed and strummed in the streets for a handful of coppers; or, again, the girl who fought for fame at the Gymnase and Comédie Française, and, when it came, had to keep a tutor to write her letters, and implores him "not to drop" her till she has completed her social education.

Rachel in these phases, as in the later one of the woman who sought feverishly for love and never found it, Mr. Gribble describes with a wit and a spirit that never flag. No one can say that he has not done his task well. There is not a single dull page in his book; if it has any fault, it is that the author is too constantly clever in his style.

CORRIGENDUM.—P. 540, col. 3, first line of quotation, omit "weekly."

MESSRS. BELL'S BOOKS.

NOW READY, 2l. 2s. net.

ENGLISH PASTELS (1750-1830).

By R. R. M. SÉE.

With an Introduction

By G. C. WILLIAMSON, Litt.D.

A critical and biographical study of upwards of one hundred artists who painted in coloured chalks during the second half of the eighteenth and the beginning of the nineteenth centuries.

LIMITED EDITION OF 750 COPIES.

Demy 4to, bound in white forel, containing 20 Full-Page Plates in Colour and 40 in Black and White.

Write for a Prospectus and Specimen Plate.

Illustrated. Medium 8vo, xii-632 pages, 16s. net.

WILLIAM PITT AND NATIONAL REVIVAL.

"Dr. J. Holland Rose has an acknowledged place among the very first of living historians, and this splendid volume—a really remarkable addition to historical biography—may perhaps be regarded as his finest achievement... The careful scholarship and literary charm of this fine work should delight many readers, and make them look forward with interest to Dr. Rose's promised study of 'William Pitt and the Great War.'"—*Daily Telegraph*.

"It is the most complete study of the first half of Pitt's divided career which has been published. Dr. Rose is saturated with his subject. It is enthralling to read the very names of the events of that age when Pitt was restoring the crumbled designs of his great father, and Dr. Rose, who handles history with a confident yet scrupulous touch, adds to the fascination."—*Spectator*.

LITERATURE

Webster's New International Dictionary of the English Language. W. T. Harris, Editor in Chief; F. Sturges Allen, General Editor. (Bell & Sons.)

THE present writer once heard an American Professor declare that in the United States people appealed to dictionaries for authority more frequently than in this country, and that a preacher had made in his hearing three mistakes in pronunciation in one sermon in Westminster Abbey. The mistakes were not mentioned, though asked for, which reduced the effect of the denunciation; but it is fairly certain that no people are more careless about accuracy in words and pronunciation than the English. All the reasonable standards of speaking and writing which education might be supposed to involve are disappearing; journalists, ignorant of good existing words, invent atrocities of their own and misuse foreign phrases; and even those who teach are uncertain of the sounds of their own language.

The great Oxford Dictionary is a monument of careful research and happily copious industry unequalled in any country; but it is far too large for the ordinary person to consult, and as yet unfinished. 'Webster' consequently maintains the pre-eminence long awarded to it as the best of single-volume guides to lexicography. It has by this time, as its title indicates, an international reputation, though in earlier days its

merits were often contested. Brasted, for instance, the author of 'Five Years in an English University,' and a Yale man who was a scholar of Trinity College, Cambridge, declared in the fifties that "Webster is no authority at all among scholars."

The book has changed much since those days, and recent revisions and enlargements in all departments have been far-reaching in their effect. The huge volume before us, which is admirably bound in a style calculated to resist the handling of the assiduous student, contains no fewer than 2,700 pages and 400,000 words and phrases. The general editor, Dr. Sturges Allen, had experience as an assistant in the thorough revision of 1890, and has been aided by experts in various lines who have done their best to keep up with the unceasing alteration or advance of language.

The new features in the present edition which strike us at once are that the main vocabulary has now absorbed the contents of several special sections which used to figure at the end of the book, and that each page of it contains a dividing line separating words and phrases above and below as more or less important. Thus we find figuring in the vocabulary among the general host of words not only the adjective "Dickensian," but also Mrs. Gamp; not only the word "Philistine," but also the Latin phrase "Vita sine litteris mors est." This rearrangement has doubtless involved much time and trouble, but it is a great convenience, as it renders the contents of the Dictionary much more easily accessible to the impatient reader—the sort of reader of whom in this age of hurry and hustle we hear most. If this omnipresent person will only turn to the Dictionary, he will find it very comprehensive—almost encyclopædic, indeed, in range. Here are a multitude of words such as "copra," "patio," "shikari," "sjambok," and "spinifex," which frequently occur without explanations in the literature of travel or the fiction of the outlands to-day. Modern enterprise in theory and practice is represented by the "electron," and the "chauffeur," not included in the edition of 1902; and that issue, though it contained a useful 'Supplement,' also failed to give such important words in two departments of scientific scholarship as "Mousterian" and "Mendelism," which are now duly explained. Science, indeed, supplies more new words than any other source of lexicography; they are not commonly good words, but they are bound to exist; and we therefore notice with satisfaction the attention that has been paid to this technical side of language. Brief derivations of words in accordance with the latest results of philology are added, and as many instances of usage by well-known authors as could be expected in a single volume, while illustrations are abundant. The Dictionary retains, naturally, a slight bias in favour of American practice, though in spelling we find such forms as "center" and "centre" both recognized.

The numerous references to familiar names in fiction and history should be very helpful to the ordinary man. Occasionally a word or two more might be said about a well-known use. Thus a sense of Egeria is common in the world of fiction which is not represented under "Diana," to whom we are referred. "Shavian," the adjective to which "G. B. S." is noun, is duly entered, and so is "Saint-Simonian," which Mr. Hardy has used in his fiction. Under "Florizel" we are referred to Shakespeare and George IV., but not to that Prince of Bohemia known to all readers of 'The Suicide Club.' Perhaps we should not expect to find the last, but, after all, we meet with the Daisy Miller of Mr. Henry James and the Col. Mulberry Sellers of Mark Twain whom it would puzzle some English readers to identify. Generally the selection of proper names is extensive; opening the Dictionary at random, we come on the "Danbury News Man," George Dandin, the "Dandy King," Joachim Murat, and Edmond Dantès, besides some obvious people from Greek mythology.

Turning to the language of common life, which includes slang, we look up a few representative words. The "taxicab" is here, but not the "Metropolitan" in the familiar sense of the London railway, though we should have thought this sense deserved inclusion better than that described as "*Gr. Hist.* a citizen of a metropolis." The "Tube" is here, but the "straphanger," who might need explanation outside London, is not. We find the "boots" of an hotel, and the "tip" that he gets. Altogether, it looks as if the next edition of "Webster" might be profitably revised after an interview with an English Philistine. Still, his "tommy rot" is included; and there is a considerable advance, we note, in the descriptions of English sport.

But, though the Dictionary should, according to its Preface, furnish a key to the daily newspaper, there is much in that source of fact and fiction that may be, and, we think, should be, neglected. The mere provision of explanations concerning things supposed to be well-known occupies much space, and is really necessary. "By the by," said a lady after being shown round a building described as "Jacobean," "who was Jacob?" The question is well answered here.

Of American slang there is much that the average Englishman knows no more of than Greek. For instance, the over-curious or interfering person is styled a "Rubberneck," abbreviated, we believe (though here we have not Webster's authority), in common circles to "Rubber!" which thus comes to mean "Mind your own business!" It is a good example of the imagery which lends so much vividness to English on the other side of the Atlantic. Even such serious people as our own politicians indulge in popular similitudes, for the other day the "kangaroo" closure was invented. Of the Parliamentary sense of "tacking,"

which Mr. Asquith defined a month or two ago, an account will be found.

We have said enough to show the interest of this great Dictionary. That frequently misapplied adjective is fully justified here, and we expect often to consult the latest 'Webster,' as we did the previous editions.

Isabella of Milan, Princess d'Aragona, and Wife of Duke Gian Galeazzo Sforza: the Intimate Story of her Life in Milan told in the Letters of her Lady in Waiting. By Christopher Hare. (Harper & Brothers.)

THE author of this book does not claim originality for her method of embodying in the letters of an imaginary personage a narrative of historical fact. The vehicle offers some advantages, though it imposes a somewhat exacting literary standard. Still a comparison of the Prologue, and still more the Epilogue, both in the ordinary narrative form, with the epistolary main body of the book, shows Christopher Hare to be more at her ease in the less familiar medium. The device may, therefore, upon the whole, be pronounced successful.

In a series of 47 letters, an imaginary lady-in-waiting, Violante da Canossa, who accompanies her mistress, Isabella, granddaughter of Ferrante I., King of Naples, and daughter of Alfonso, Duke of Calabria, on her marriage with Gian Galeazzo Sforza, Duke of Milan, is supposed to tell a crippled sister whom she leaves behind in the south, the sad story of the princess's life in the eventful years between 1489 and 1500. Those years were fraught for Isabella with the loss not only of her children's inheritance, but also of her son's person and the lives of her father and only brother. She lived, moreover, to see Naples reft from her family as well as Milan; to hear of her exiled son's death in a hunting accident; and to endure separation from her sole surviving daughter, who left her to become queen of distant Poland. She might well sign herself "Ysabella de Aragonia Sforzia, unica in disgrazia."

The villain of the piece is the uncle of Isabella's husband, Lodovico Sforza, known as "Il Moro," of whom the bride's father expresses doubts even during the wedding festivities. No sooner are the bridal pair established in Milan than the husband's mother warns her daughter-in-law that Lodovico will make himself Duke, "if you are not strong enough to stop him." When Isabella tries to make the young man assert himself against his autocratic uncle, Gian Galeazzo blurts out her counsels under the influence of wine, and throughout his short life shows himself indifferent to aught but hunting and soft living. Then, when the real ruler of Milan marries the brilliant Beatrice d'Este, a rivalry between her and the wife of the nominal ruler increases

the intensity of the situation. The Duke of Bari even goes the length of accusing his nephew's wife of attempting to poison two of his favourites; and the exterior splendour of endless festivities and diversions covers cruel scheming and relentless ambition. Isabella appeals to her father; but the threatening cloud of the coming French invasion defers for a time an open quarrel between Naples and Milan.

Meanwhile Lodovico, Duke of Bari, the nominal Regent, causes his sons' birth to be celebrated with magnificence far exceeding that accorded to the heir of his nephew, the nominal ruler of Milan; continues to fish in troubled waters; and, having obtained a secret promise of investiture for himself from the Emperor, merely bides his time. The forces of nature work for him; and when Gian Galeazzo dies in his youth, he loses no time in getting himself proclaimed and setting aside his nephew's heir. A Sforza is now Empress: everything seems to prosper with the new Duke. The usurper was said to have boasted, after the formation of his league with the Emperor, the Pope, and Venice, and the departure of Charles VIII. from Italy, that the Pope was his chaplain, the Emperor his Condottiere, and the Republic of Venice his banker, "and that the King of France may be called his courier, who comes and goes at his will."

Yet the end of all was that the French courier's successor, Louis XII., came and took from Lodovico his stolen duchy; whilst the usurper, before abandoning Milan, made over his own principality of Bari to the injured Isabella as a tardy reparation, at the same time warning her not to trust the foreign invader. Isabella took the Duchy, but not the warning; and Louis carried off her son to France and kept him there till his death.

The writer of these letters, being a lady, is not sparing in her descriptions of weddings and ceremonials, and revels in accounts of the gorgeous costumes and adornments in which her contemporaries delighted. Besides the marriage of her own mistress with Gian Galeazzo and that of the latter's uncle with Beatrice d'Este, she finds opportunity to tell of the wedding of that insatiable collector Isabella d'Este with the Marquis of Mantua, of Bianca Sforza with the Emperor Maximilian, and several others. The "mixture of extravagance and mere outward show" that prevailed at Milan; the more solid magnificence of Venice (whither our lady-in-waiting accompanies the Duchess Beatrice on an embassy to the Signory); tournaments, hunting parties, and receptions of foreign embassies, enter largely into the epistolary narrative; and we hear in passing of the death of Lorenzo the Magnificent, the election of the Borgia Pope and the marriage of his daughter Lucrezia, the preachings and prophecies of Savonarola, and the edifying end of Alfonso of Calabria in his Sicilian retreat. By the by, the martial exploits of the last-named, "the victor of Otranto," were, we think, scarcely worthy of the commendation with which Violante speaks of them,

though she seems to have had some comprehension of the fact that his career was by no means spotless.

In her sixth letter the lady-in-waiting describes a visit she had paid to the Signora Cecilia Gallerani, one of the two famous mistresses of Lodovico Sforza, and meets Bandello, Leonardo, Niccolo da Correggio, and Bellincione the Court poet, whose sonnet in praise of Isabella of Milan is quoted on the title-page. Bandello reads "the amazing tale of the patience of sweet Griselda," and all the ladies denounce that heroine, Violante in the forefront. After her son's deposition Isabella is persuaded by her woman

"to accept the respectful invitation of the painter Leonardo to watch him beginning his work on the mural paintings in the Convent of Santa Maria della Grazie. We have been there privately each day this week," proceeds Violante, "and the great artist has told us about the work he is just beginning, and has shown us his rough designs for the wonderful 'Last Supper,' which is to cover the whole of one side of the Dominican refectory. This will be a task of unfailing delight to him if he is suffered to continue it, and not constantly interrupted by Duke Lodovico to make roads or buildings, or figures for mosques, or even to finish that immense statue of Duke Francesco on horseback."

Later we hear of interruptions to the great work, the monks' impatience at the delay, and the artist's methods of work. We are also afforded glimpses of the author of 'The Courtier' in his splendid youth; have a pleasant introduction to Ariosto (he reappears in the train of that Duke of Ferrara who was devoted to the plays of Plautus); and are even favoured with an account of Columbus's discovery of America, supposed to be communicated in a letter received from his father (who commanded one of the ships in the expedition) by Señor Garcia Pinzen. Thus the letter writer has contrived to get in a great deal that was notable in that eventful decade which closed the fifteenth century.

Some sense of atmosphere is doubtless conveyed, and historical accuracy is, so far as we have noticed, maintained; but there are at times jarring notes. Such phrases as "makes the pace," "saved the situation," and others like them are strangely incongruous; and the adjective "priceless" is overworked. The writer's attitude towards Savonarola and her sentiments about female royal offspring strike one as suspiciously modern, even if her view of Griselda be not; whilst in the discussion at Cussago on Boiardo's 'Orlando Innamorato' one cannot help feeling that the author is using her puppet as the vehicle of her own literary criticism.

The cipher to which the correspondents resort for the protection of their dangerous communications does not seem over-convincing; whilst the clumsy device of recapitulating the contents of a letter to which an answer is being given is destructive of the illusion of reality, the object being too obviously to introduce a few more facts. Nor does an

occasional curt note, indicating a date or additional small fact, add to the literary charm of the text. But, as was remarked at the beginning, the medium chosen is difficult, and has been used with some skill. Some beautiful illustrations are admirably reproduced, and the letter-press is pleasant to the eye.

The Life of Field-Marshal Sir Frederick Paul Haines. By Robert S. Rait. (Constable & Co.)

FREQUENTERS of Pall Mall were familiar for many years with the handsome, soldierly presence of Sir Frederick Haines, and not long before his death they must have noticed with regret that the veteran's strength showed signs of decline. His protracted and distinguished career has found an able narrator in Mr. Rait, the biographer of another field-marshal, Lord Gough.

We need not dwell upon its earlier phases, since in describing the campaign on the Sutlej and the conquest of the Punjab, in which young Haines played a subordinate part, the writer is covering ground which he has traversed before. A pleasant story is told, however, to the effect that after Ferozeshah, as Haines was lying in agony on the limber of a gun with a bullet in his leg, the driver, who had bowled him at Umballa when within one of his "century," said, "Hope it won't spoil your cricket, sir." It did not. When the cold weather came on, Haines made 44 runs and took a considerable number of wickets, though the wound gave him trouble for some time afterwards.

During the Crimean campaign, Haines acquitted himself like a man, and at Inkerman, with some forty men, he held "the Barrier" against vastly superior numbers of Russians. Mr. Rait is able to correct Kinglake's version of this strenuous affair in several important points, and to print a letter from the gallant Pennefather, who, if any man ever did, knew what hand-to-hand fighting was like :—

"At Inkerman, a wing of the 21st Fusiliers was posted at the stone barrier across the road, in front of the position of the 2nd Division, where it held its ground most toughly, though repeatedly attacked, indeed constantly attacked, and pressed by very heavy odds of the enemy. Here Col. Ainslie of that corps was killed, and Haines succeeded to the command, and, as the wing was immediately under my eye, and in a most important post, I had an anxious watch on their conduct, and I never saw a man more efficient, more cheery, more cool, and more with his wits about him in my life than Col. Haines showed himself during a long and trying struggle. When his ammunition was expended, he urged me for more, and on my promising to get it for him as soon as I could, and telling him he must at all events stand his ground with the Bayonet, his cheerful answer and buoyant lively manner of obeying had great effect on his men."

We get, too, from Haines's correspondence a vigorous description of the November gales which ushered in the calamities of the Crimean winter.

As Military Secretary to Sir Patrick Grant, the acting Commander-in-Chief, Haines saw much of the preparations for quelling the Indian Mutiny, and Mr. Rait publishes several papers which show that Grant's services during the critical weeks which preceded the arrival of Sir Colin Campbell have received insufficient recognition. "Sir Colin was immensely civil to me," wrote Haines to his wife; "I am his 'dear friend' here. At Balaclava I was 'that d—d fellow.'" Others besides Campbell approved of Haines, and he rose slowly but surely in his profession until, in September, 1875, he was appointed to the chief command in India in succession to Lord Napier of Magdala.

During the period of his command Haines was overshadowed by soldiers of greater brilliance than himself in Lord Roberts and Donald Stewart; but it is clear that his value throughout was great, and that it lay chiefly in the drag he imposed on Lord Lytton's adventurous designs. Full details are given of the Viceroy's desire to send a small, carefully chosen force through Afghanistan to Balk, straight on Tashkend, when, in the autumn of 1877, hostilities appeared imminent between Great Britain and Russia. Haines wisely objected to the idea :—

"To attack Russia in Central Asia by this route, with a light column of troops, would be an operation so full of risk as to be prohibited by all considerations of military strategy and by prudence, even were we supported by the power of the Amir; for even then we must take into consideration the frail security afforded by the Amir's life, the uncertainty of the succession, and the proverbial treachery of the Afghans."

The only possible line of attack, Haines contended, was through Kandahar and Herat. Later we find him protesting vigorously against making the Kuram valley a basis of operations against Kabul—a point on which he was absolutely justified in the result—and against the unwise reduction of transport organization on the conclusion of the Treaty of Gundamak, a settlement he declined to regard as permanent. "Brotherly love does not count for much in Afghanistan," he wrote with some humour, after enumerating the various pretenders in the field. We get, too, a new and good story of the unfortunate Cavagnari. "This is a great chance for you, Cavagnari," said the Commander-in-Chief. "Yes, sir," was the reply, "it is a case of a man or a mouse"; in other words, he might be walking into a death-trap. When the war was resumed, Haines experienced fresh friction with Lytton, but they parted on excellent terms. Lord Granville did the Commander-in-Chief no more than justice when he declared that "in no instance had failure been attributable to arrangements made by him," while it may be added that he never interfered with general officers commanding in the field or attempted to belittle their exploits.

The reorganization of the Indian Army had in Haines an emphatic opponent. His views, based chiefly on historic sentiment, are worth consideration, but they cannot be called conclusive. Mr. Rait remarks, reasonably enough, that the new system has not yet been tested by war or revolt. But that argument hardly meets the point that the old one had become obsolete.

Haines's last years were chiefly spent as a London clubman, though he represented the British Army at the Russian and German manœuvres. During the first visit he turned a gallant and appreciative eye on royal beauty; the second enabled him to give a striking description of German military power. Mr. Rait supplies a pleasant account of the fine old man's evening of life—the best anecdote, Sir Squire Bancroft's, being about a jackdaw which Haines used to feed in St. James's Park, and whose disappearance he much lamented—nor has he forgotten the wreath on the grave with the inscription, "From the Bugler who gave you a drink of water on the field of the Alma, and whom you did not forget when he was in trouble forty-four years later."

PERSIAN MYSTICISM.

It is surely a mistake to estimate mysticism solely by its Christian developments, such as English readers have studied in the new Dean of St. Paul's St. Margaret's Lectures for 1905 or in Miss Underhill's recent book. An important review of the latter in a contemporary appears to criticize the validity of mysticism on the ground that it is not Christian. A mystic would undoubtedly reply that it is not co-extensive with, but inclusive of, Christianity. Mysticism is no system of dogmas, but a psychological attitude, an emotional state in relation with the transcendent, and it is capable of expression in terms of various religions, just as a melody may be played in different keys, or, to use a closer analogy, as a musical instrument produces different forms of music. Mystics, it is true, rarely perceive this. They play the tune proper to their latitude and longitude, and usually imagine that it is the only possible combination of sounds that can be correctly produced. This results partly from the inevitable tendency of the unphilosophical mind to shun abstractions and attach itself to concrete forms, but it is peculiarly characteristic of mysticism, which consists rather in sensation and emotion than in conceptual thought. St. Theresa would

The Kashf al-Mahjûb, the Oldest Persian Treatise on Sûfism. By 'Alî b. 'Uthmân al-Jullâbî al-Hujwirî. Translated from the Text of the Lahore Edition, compared with MSS. in the India Office and British Museum, by Reynold A. Nicholson. Vol. XVII. of the "E. J. W. Gibb Memorial." (Luzac & Co.)

have been shocked to find herself classed with Ghazzali; and the latter indubitably, and not without reason, would have repudiated her as a singularly ignorant heretic. Yet Ghazzali, with all his magnificent intellectual powers and metaphysical training, was as illogical in linking his mysticism to Islam as St. Theresa was in limiting hers to a purely Christian ecstasy. Had she been born in Persia and he in Italy, the results, we may suppose, would have been entirely different.

In these days, when there is a genuine interest in religious psychology, apart from much glib talk about "immanence" and "transcendence," and "new" theologies which are as old as the hills, it is surprising how restricted, we might almost say geographical, the purview still remains. Even William James, in the book that has had a predominant influence upon the prevalent tendency of religious speculation, gives an absurdly small space to the discussion of Oriental mysticism. Yet it is in the East that mysticism not only had its birth—as most things had—but also received its most complete literary expression. But for the unfortunate fact that Orientalists are of necessity learned men, and consequently not well fitted to communicate their information to the common people, every one would have heard all about Persian mysticism long ago. Indeed, there are now hopes that the subject may become familiar to serious readers, since Prof. D. B. Macdonald of Hartford has published his 'Religious Attitude in Islam,' where the mystical developments are treated with a breadth and vividness, wholly removed from pedantry or academic aloofness, which commend his writings to those who might be frightened by more technical treatises, even when they are so rich in thought and felicity of expression as Prof. Browne's 'Literary History of Persia.' We entirely agree with Dr. Nicholson that an ancient and famous treatise on mysticism, written by a Persian philosopher of some metaphysical training in the eleventh century, ought to attract not Orientalists alone, but also various readers who "are interested in the general history of mysticism, and may wish to compare or contrast the diverse yet similar manifestations of the mystical spirit in Christianity, Buddhism, and Islam." But the ordinary reader is a timid creature, and like a horse, needs to be gently soothed and cajoled before he will venture into a strange stable.

Dr. Nicholson has marvellous erudition, and, what is even more important, an extraordinary grasp of Persian thought (as fully appears in his translation of the subtleties and technicalities of the book under review), but he does not understand the shyness of the human animal. The title of the treatise he has so brilliantly translated, 'Kashf al-Mahjûb,' is enough to make any reader nervous, and a considerate editor would have substituted its English meaning, 'The Revelation of the Occult,' as a persuasive title.

This device may not be the ideal of austere scholarship; but, if scholarship is to permeate unscholarly minds, it must condescend to them. There is a true saying about making friends with mammon of one sort or another. Then who that is unlearned can tolerate an author whose name is Al-Hujwirî? Even if we suppose the 'Kashf al-Mahjûb' of Al-Hujwirî to be assimilated by a peculiarly hardy reader, what will he make of four hundred pages in royal octavo full of subtle distinctions as discriminated by various "saints" of various subdivisions or sects of the Sufis, with the word "Section" printed in capitals at intervals for no object (except that it so occurs in the original Persian), and with the numerous technical Arabic terms given in transliteration?—greatly to the benefit of Orientalists, but to the desperate confounding of other folk. If the treatise is to commend itself to the ordinary reader, it should begin at chap. xv. with 'The Uncovering of the First Veil: the Gnosis of God,' and the previous chapters should be epitomized; or, better still, the whole work should be rewritten much more shortly and in a simpler style. We are afraid we must add that to ensure popularity it should appear in a "dainty" series, be bound in limp leather, or even suède, and be introduced by a preface written by some literary favourite who knows very little about it. Lastly, it should not drop out four pages (437-40) of its Index, as our copy does.

In saying this we are far from belittling Dr. Nicholson's work, about which scholars cannot hold two opinions. It is of the finest quality. All we wish to indicate is that Orientalists cannot expect the ordinary reader to follow them unless they take some pains to attract, and so far not one Orientalist in a hundred (to say the least) has any idea of what the public needs. Prof. Burkitt might as well preach the higher criticism and a metaphysical exposition of the Athanasian Creed to a congregation of farmers as Dr. Nicholson expect the general reader to be "interested" in the 'Kashf al-Mahjûb' of Al-Hujwirî. Orientalists, on the other hand, will be sincerely grateful to him for collating the somewhat indifferent Lahore text of the work—the only one printed so far—with the two MSS. in the India Office and the one in the British Museum, and verifying the author's citations of Al-Sarrâj's 'Kitâb al-Luma' in Mr. A. G. Ellis's unique MS.; and they will appreciate the marvellous manner in which the obscurities of the text have been rendered intelligible, and the skill shown in the translation of Sufi technical terms into the corresponding (or as nearly as possible) terms of Western metaphysics and psychology. We take exception, however, to the use of the term "spiritualists," which has a restricted meaning in English not connoted in the original; and we could have wished for a few cross-references to leading definitions and explanations. For example, the

reader of the words "the followers of subsistence," &c., p. 377, may have forgotten that "subsistence" is minutely explained on pp. 242 ff.; and the difference between "hâl" and "maqâm" referred to on p. 371 should have been clarified by a reference to p. 181. It would also have been well to indicate by thick type in the Index of Technical Terms the pages where the chief definitions are to be found. These things would occur to a literary workman of experience, but our Orientalists will not so far condescend to the common understanding.

The treatise, which was clearly composed expressly for the tuition of novices in Sufism, is well arranged for that purpose, though hardly systematic enough for a treatise addressed to philosophers. Its logic, as Dr. Nicholson observes, is not always logical in our sense, and even the translator's learning and insight occasionally fail to enable us to follow the more obscure lines of thought. The long series of very significant chapters on the teaching of various leading Sufis or schools (real or imaginary) of Sufis look like digressions, yet the reader who skips them will find that he has missed many an important definition or development of an idea. The book is full of passages which cry out for quotation, and yet we hesitate to detach them from their context. There are many pithy definitions which need the author's explanations for their full comprehension, but may stand by themselves. "The outward and inward aspects cannot be divorced. The exoteric aspect of Truth without the esoteric is hypocrisy, and the esoteric without the exoteric is heresy": hence the attempt to reconcile Sufism with practical Islam. The doctrine of "poverty" and "purity," which mean much the same thing, is in the forefront of mysticism, and we find them thus defined in short: "The poor man is not he whose hand is empty of provisions, but he whose nature is empty of desires"; the pure man (Sufi) "is he that has nothing in his possession, nor is himself possessed by anything." The delightful chapter on 'The Wearing of Patched Frocks,' the well-known *muraqqa'a* of the dervish, contains this fine comment of Hujwirî's on a dark saying by Gurgânî:—

"A right patch is one that is stitched for poverty, not for show; if it is stitched for poverty it is right, even though it be stitched wrong [for intention counts for everything with the Sufis]. And a right word is one that is heard esoterically, not wilfully [by volition], and is applied earnestly, not frivolously, and is apprehended by life, not by reason. And a right foot is one that is put on the ground with true rapture, not playfully and formally."

And in regard to patches:—

"It is related in the genuine traditions that Jesus, son of Mary—God bless him!—was wearing a *muraqqa'a* when he was taken up to heaven. A certain Shaykh said: 'I dreamed that I saw him clad in a woollen patched frock, and light was shining from every patch. I said: "O Messiah,

what are these lights on thy garment?" He answered: "The lights of necessary grace; for I sewed on each of these patches through necessity, and God Almighty hath turned into light every tribulation which He inflicted on my heart." "

The Sufi teaching as to "times" and "states" is of the deepest interest, and in the distinction between "hál" and "tamkín" one may detect a hint of the "actual" and "habitual grace" of the scholastic theology. The total annihilation which is supposed to be the goal of the Sufi is here denied:—

"Some wrongly imagine that annihilation signifies loss of essence and destruction of personality, and that subsistence indicates the subsistence of God in man; both these notions are absurd.... Our subsistence and annihilation are attributes of ourselves, and resemble each other in respect of their being our attributes. Annihilation is the annihilation of one attribute through the subsistence of another attribute.... Whoever is annihilated from his own will subsists in the will of God, [as] the power of fire transmutes to its own quality anything that falls into it.... but fire affects only the quality of iron without changing its substance."

But it is necessary to read the whole treatise in order to appreciate the beauty of its doctrine and the subtlety of its reasoning.

NEW NOVELS.

The Dweller on the Threshold. By Robert Hichens. (Methuen & Co.)

IN this psychological novel the author seeks to raise our interest by would-be weird experiences, which are the outcome of a transference of personalities between an originally self-depreciatory curate and his erstwhile arrogant though back-sliding rector. By the student of character the effect of one individuality upon another can be traced to a greater or lesser extent. In the present work the author seeks to show the outcome of its greatest manifestation, and makes a plausible story. But in spite of his professor who investigates the case in the interests of science, we are left much where we were before, and not too well satisfied with Mr. Hichens if we are to regard him seriously as a psychologist. His work arouses our interest, but we cannot say that it adds to his considerable reputation.

The Stolen Lady. By Alice and Claude Askew. (Ward, Lock & Co.)

THIS romance of the present day is tempered by farce. The heir-presumptive of a small German principality, much an artist and something of a madman, has built himself a mysterious palace on the coast of Cardigan, whither he proposes to retire, intending to lead some such life as did the late King Ludwig of Bavaria. The project interests a very young English lady, whose fancy is not satisfied by an

honest British lover of the athletic pattern produced at our public schools. She proclaims that she will only wed the man who has qualified by adventure. The excitement following on this resolve must be left to the reader to discover.

The characters are well imagined and developed, and the tale, though slight, is readable.

People of Popham. By Mrs. George Wemyss. (Constable & Co.)

MANY delightful pieces of absurdity in speech and conduct are scattered up and down this amiable novel, in which a sprightly spinster sets before the reader a series of character-sketches representative of the population of an English village. The plot (such as it is) is confused and unconvincing, but happily it does not occupy much space. Perhaps the best-drawn character is the narrator's domestic, whose care for her mistress's reputation is manifested in a comically original way. Some of the prattle recorded by the village chronicler is not unworthy of Gyp, and the chapters inspired by the ugly synonym "encumbrances" (for children) are admirably pathetic.

Robinetta. By Kate Douglas Wiggin, Mary Findlater, Jane Findlater, and Allan McAulay. (Gay & Hancock.)

A NOVEL centring round a plum tree makes a seasonable appearance, at the present time of blossoming. There is much else to call to our minds the charm of life's springtime, notably the mating of a young solicitor, who is in danger of settling down into a rut, with a young American widow to whom marriage heretofore has not meant living more abundantly. The autumn of life and its gracious tints are presented in the person of an old nurse who cannot be persuaded that the plum tree she has reared is not her very own, and the austere aunt who has a corner of her heart kept warm by the pride of race. The co-operative principle has worked better than might have been expected.

The Claw. By Cynthia Stockley. (Hurst & Blackett.)

FIGURING the fascination of South Africa as a claw which snatches men from milder countries and fastens "into their hearts for ever," Miss Stockley relates with power and sincerity, through her heroine's mouth, a story of love, jealousy, slander, war, and crime. The hero is a major who is the idol of a group of women in the Mashonaland station where the heroine distinguishes herself by helpful acts and cheering influence during the Matabele rising of 1893. Warm praise is due to the vividness with which the social life of a restricted and anxious community, civil and military, with a crude Dutch

element in its composition, is presented to the reader. Admirable, too, is the dramatic use made of the historic incident of the death of Major Allan Wilson and his 34 comrades; and the heroine's biting wit, her candour in love, and her sympathy with black sheep make her a remarkable figure. The abominable marriage into which she is tricked by false evidence of the death of her lover is the cause of some morbid scenes, which show feeling and power. Unfortunately, the process by which the heroine regains happiness is unconvincing, but the novel is a notable work.

Ivor. By George Hansby Russell. (John Murray.)

AN eighteenth-century rascal, Thomas Benson, M.P., whose evil fame is recalled to visitors of Benson's cave in Lundy Island, serves Mr. Russell as the principal villain of a spirited and ingenious tale. The hero named in the title, having been illegally imprisoned on Lundy Island, escapes in the first chapter to the Devonshire coast, and after being arrested for poaching, is mysteriously befriended. The heroine is a squire's daughter, and her abduction and rescue from the watery grave to which a rejected and enraged nobleman, anxious to marry her for her money, had condemned her, provide sufficient thrills to redeem the novel from the accusation of tameness to which it might otherwise have been liable. Literary vanity is amusingly depicted by Mr. Russell in a fancy portrait of John Shebbeare, who was pilloried in the reign of George II. and pensioned in that of George III.

Other Laws. By John Parkinson. (John Lane.)

READERS who like their fiction to respect the sexual decrees of Mrs. Grundy, and who dislike irony at the expense of altruism or Providence, will be offended by this novel, which, however, stands out from the common ruck by virtue of sound realism, firm, and interesting characterization, and an intellectuality stimulating thought. The principal characters are an explorer, a newspaper editor, and a woman who only needs sympathy and encouragement to do valuable literary work. In West Africa the explorer, who loves this woman, and his comrade, postpone their departure for England for the sake of a drunken storekeeper's wife whose life is menaced by the evil conditions under which she lives. The delay, useless to the object of it, is the indirect cause of a rumour of their death, and, believing them to be dead, the heroine marries the editor. The death of her lover's comrade throws upon the former the responsibility of completing their work, but illness and fear prevent him from making an exploration to which he had pledged himself; and miserable, already wounded in honour, and submissive to the ruling of Natura Maligna, he eagerly appeals

to the love of his married sweetheart, and induces her to leave her husband and throw in her lot with him. We may add that Mr. Parkinson cleverly depicts the difficulties encountered by African explorers, and that his editor is a triumph of scrupulous satire.

LOCAL HISTORY.

THE latest addition to the "Memorials of the Counties of England" is a volume dealing with *Old Surrey* (Allen & Sons), under the editorship of the Rev. J. C. Cox. The weakness of the scheme of the series is its inevitable lack of system. There is no definite plan laid down for the construction of the book, but each writer is left to his own subject, and the subjects, one fancies, are chosen sometimes in a haphazard way. This volume, for example, comprises thirteen papers by eight writers. The editor is responsible for three papers, Mr. H. E. Malden for two, Dr. F. R. Fairbank for two, Mr. S. W. Kershaw for two; while single contributions are made by Messrs. G. Clinch, Aymer Vallance, Tavenor-Perry, and P. Mainwaring Johnston.

Dr. Cox is a skilled antiquary, and his particular interest is in ecclesiastical architecture and tradition. One of his articles deals with the 'Religious Houses of Surrey'; in another he treats of the Forests; while his third, which is a narrative of the Hindhead murder, illustrates our point as to the casual nature of the scheme of the book. There is really no reason for recounting the story of that crime any more than that of any other committed in the county.

Mr. Malden deals clearly, concisely, and interestingly with 'Historic Surrey,' but perhaps his place of priority should have belonged to Mr. Clinch in his account of prehistoric Surrey from neolithic times. Mr. Clinch suggests—and we think he is right—that if excavations were made on Farley Heath, they would result in many valuable Roman "finds." Some day this work may be undertaken, and in such a way, and under such supervision, as not to spoil the beauty of the neighbourhood.

The editor's zeal for ecclesiastical subjects is displayed in his selection of papers by Dr. Fairbank on memorial brasses and the Abbey of Bernondsey, and by Mr. Kershaw on Lambeth Palace, Mr. Johnston on wall paintings in churches, and Mr. Vallance on rood-screens and lofts. There are many other ecclesiastical buildings which might have received consideration, for example the Archbishop's Croydon palace. One is at a loss to know why an article on Fanny Burney is included, and not one, say, on Cobbett or John Evelyn.

But it would be rank ingratitude to find further fault with a volume which is a pleasant stimulus to interest in a charming county. The nature of the series must be rambling, and there's an end of it. The information is commendably accurate; there is a good Index, and the volume is well illustrated. It should be sure of a place on the shelves of all lovers of Surrey.

The Records of Rochester. By the Rev. C. H. Fielding. (Dartford, Snowden Brothers.)—A great deal of labour has been spent by the compiler on the 600 pages of this closely printed book. It purports to be a record of Rochester diocese from the earliest times to the present day. Lists of

incumbents are supplied for every parish, chiefly taken from the episcopal registers. The church notes are vaguely put together, and follow no common method. Mr. Fielding is loose in his descriptions of old churches and their fittings. Those who have expert knowledge of these ancient Kent buildings will be surprised at not a few of these brief accounts. The statements are often so indefinite as to be useless. Here is a sentence in the notes on the church of Grain:—

"There is a curious niche in the east wall, near the altar, the use of which is unknown; it may have been used for an Easter Sepulchre or Credence Shelf, we hardly think to bake bread, as suggested."

The last section of the book is concerned with the 'Episcopal and Parish Registers.' The two or three pages as to the former of these registers are of small value, being an attempt at a general survey of their contents. Mr. Fielding is of opinion that "they are all written in the courthand of their respective periods, and the earlier portions in Latinised Norman-French." The remarks as to parish registers are also open to criticism. We are told that Cromwell's Act instituting parish registers was passed in 1536, but the true date is 1538. The author adds: "But of those parishes we have to deal with, only the following commence probably at the earliest." It is not easy to understand the meaning of this sentence, but it is followed by a list of 17 parishes whose registers begin in 1538 or 1539; the list is, however, faulty. Mention is made of "the government duty of 3d. on all baptisms and burials made in 1783." This is incorrect: the Stamp Act of 1783 imposed a duty of 3d. on every entry in the parish register.

A Quantock Family: the Stawells of Cothelstone and their Descendants, the Barons Stawell of Somerton, and the Stawells of Devonshire and the County Cork. Compiled and edited by Col. George Dodsworth Stawell. (Taunton, Barnicott & Pearce.)—The family tree of the Stawells was first planted on English soil at the Conquest, and, though the upper branches are all withered, there is still one lower branch which is putting forth fresh leaves. Only two, however, out of all the leaves which the tree has produced, have been deemed worthy of a place in the British Valhalla, the 'Dictionary of National Biography.' The one was the great Cavalier, Sir John Stawell, whose labours and sufferings in the cause of Charles I. were recompensed by Charles II. in the barony granted to his son Ralph. The other was the notable Colonial statesman and judge, Sir William Jones Foster Stawell, K.C.M.G.

A careful perusal of this monumental volume of close upon 600 pages (exclusive of fourteen pedigrees) has not revealed any name besides theirs which had a right to such immortality as the 'Dictionary' can give; but *proxime accesserunt* Sir Edward Stawell the Cavalier and Col. Sampson Stawell, M.P., the officer selected for the first military training of the late Duke of Cambridge.

It is a danger incidental to all family histories in varying degrees that matters of collateral and general interest should be crowded out. We do not think that the gallant author has been sufficiently alive to this peril.

Persons connected with the Stawells by propinquity or friendship or otherwise are very inadequately treated in this volume. To take a small, but not insignificant, item, the Index. John Lancaster (p. 69), Jehovah

Finch (p. 86), Christopher Vicary (p. 96), and John Todhunter (p. 209) find no place therein. The last-named is the eminent M.D., poet, and playwright, still happily with us; but for all the book before us says might lack any claim to recognition.

So far as the general public is concerned, it is much less interested in the "endless genealogies" of the Stawell family than in the side-lights which their biographies might be made to cast on the circumstances in which they lived. An interesting story might have been told about the divorce of the father of the Cavalier Sir John from his first wife, Mary, daughter of Sir William Portman, and of his second marriage to the Cavalier's mother, Frances, daughter of Sir Thomas Dyer.

There are two important points—one legal and the other biographical—left unnoticed.

It is known to all that Cranmer's proposed "Reformatio Legum" was never enacted, and that, in consequence, the pre-Reformation doctrine of the indissolubility of a marriage validly contracted was still a part of the laws of the realm. It is less widely known that the "Reformatio Legum" was acted on in the reigns of Edward VI. and Elizabeth as though it were law. It was not till 1602 that Foljambe's case in the Star Chamber finally decided to the contrary, and in Canon 107 of 1603 the Church of England brought herself into line with this decision. In the reign of Edward VI. in Lord Northampton's case it had been decided that a valid marriage was possible after a divorce *a mensa et thoro*. This decision, except in the reign of Queen Mary, prevailed down to 1602. After this year down to 1857 the only way of getting a divorce *a vinculo matrimonii* for adultery was a private Act of Parliament. Col. Stawell does not refer to the peculiar state of the law as to marriage under Queen Elizabeth.

Still more remarkable is it that he gives no indication of the conflict between the documents he cites and the story as given by Strype in his 'Life of Parker.'

Strype says that John Stawell was delated to the ecclesiastical commissioners, at whose head was Archbishop Parker, for cohabiting with a woman, his wife, divorced *a mensa et thoro*, being still alive. He tells us how the Archbishop resisted the blandishments of the Lord Treasurer, the threats of the Earl of Leicester, and the bribed importunities of members of his own household; and he leaves us with the impression that Parker resisted to the end. He also states that John Stawell was imprisoned by the Archbishop.

The documents printed by Col. Stawell, on the other hand, show the Bishop of Bath and Wells as desiring to smooth the way for a second marriage. He writes to the Archbishop, April 3rd, 1572, *inter alia*, that John Stawell had lived in chastity since his divorce seven years previously. Accordingly the Archbishop, by licence of April 26th, 1572, gives his blessing to the second marriage, which was duly solemnized. To reconcile these conflicting accounts should have been Col. Stawell's business. It is not ours.

We unhesitatingly congratulate him on the achievement of a difficult and laborious task. He seems to have made out a good *prima facie* case for all his genealogical assertions. It is in no spirit of carping criticism that we say that we vainly expected to find some note of the Rev. William Hendry Stowell, a somewhat voluminous author; also that Humphrey Stowell, mentioned on p. 51,

was probably the boy who entered Winchester College as a scholar in 1473, aged 13, from Colerne, Wilts.

The printing and illustrations of the book are exceedingly good; but for the comfort of the reader the work should have been split into two volumes. Every one with the least trace of Stawell blood should buy the book.

OUR LIBRARY TABLE.

Ruskin: a Study in Personality. By Arthur Christopher Benson. (Smith, Elder & Co.)—Mr. Benson has published as a book a series of seven popular lectures on Ruskin which he delivered last Michaelmas term in Magdalene College Hall at Cambridge. He has chosen an unsatisfactory title for them. It is true that he holds Ruskin's personality to have been the secret of his power and influence, and that he says many apt and some illuminating things about it. But his tone is discursive, accommodating, even a little evasive, like that of an accomplished reviewer; he sketches Ruskin's life in outline and his main works in their order, finding room from time to time for reflections of his own; and what he avoids—one would have said—is exactly that concentration of the attention, that restriction of the field of view, which the sub-title "A study in personality" prepared us to expect.

His picture of Ruskin cannot be called original. We are grateful to him for his eulogy of 'Fors Clavigera,' which will send fresh readers, we may hope, to that strange web of spiritual fancy; but Mr. Frederic Harrison years ago proclaimed it to be Ruskin's literary masterpiece, and upon this point good judges are agreed. Mr. Benson is not always equally happy in his endeavour to say the right thing. His remarks on Ruskin's art criticism would have been more seasonable ten years ago than they are now. He says that "it is impossible to make a greater mistake than to consider Ruskin to have been a critic of art"! Yet, after all, it is to the nicety of his perceptions, not to his lofty morality nor the grandeur of his prophet's mantle, that Ruskin owes his growing reputation in France; and what is essential to the critic is not so much to have looked at everything as to be able to see what he looks at—a point for which Mr. Benson does not allow enough. It is a point in itself perhaps somewhat alien to his thought; for in the course of his remarks on 'Sesame and Lilies' (Sesame, we hold, in spite of Mr. Benson, is used here by Ruskin to suggest "Open, Sesame," the reference surely being to books, as the magic doors which admit to the palace of knowledge) he expresses, in opposition to Ruskin, the strange conviction that "no human being is ever taught anything unless he knows it already"; so that one reads a book, and presumably also looks at a picture, to find oneself in it. A metaphysical truth of a kind no doubt supports this attitude; but it is a truth easily misapplied, and a certain monotony of tone which has characterized a series of books by the author of the 'Upton Letters' points to a tendency in Mr. Benson to overdo it. His literary facility does not serve him well in a volume like this, the effect of which depends not only upon what the author says, but also upon what he refrains from saying. The dark places of Ruskin's life, its storms and splendours, are touched in numerous passages with insight and even with beauty; but the stream of

words flows on, content seemingly, so long as there is no intermission in the flow, to pass through page upon page of barren territory; and the reader is wearied with commonplaces.

IN the "Harry Furniss Centenary Edition" of Thackeray (Macmillan) *The Newcomes*, *The Virginians*, *Esmond*, and *Barry Lyndon*, and *Catherine*, are now out. Apart from Mr. Furniss's pictures, his prefaces are admirable, and should not be missed by any admirer of Thackeray, for they are full of the lore that only an accomplished illustrator and student of the subject can supply. The artist has put his research to excellent purpose, and tells us many interesting things while he supplies some incisive comment on earlier days as compared with the present. Every page of his 'Artist's Prefaces' is quotable. In 'The Newcomes' he has chosen passages other than Doyle selected, and convicts that artist, like Thackeray himself, of choosing the wrong period. But Doyle has a charm, for the present writer at any rate, which makes all his work delightful, though he is best when he adorns an initial letter.

To the truth of Gandish as a typical person Mr. Furniss pays tribute, and remarks that Thackeray is at his best in describing "young men just on the threshold of life." The pictures of Ethel and Beatrix in their radiant youth and beauty do not satisfy us—probably nobody else's would—but we can certainly applaud all that is said concerning them, not least the dictum that in Newcome's days "young ladies... did not ape the burlesque actress—they were seldom even allowed to see them."

Col. Newcome is excellently realized in the frontispiece of the novel that bears his name, and those persons whose habit of body, age, or type of mind tends to suggest ineptitude of some sort or other, are neatly hit off—take on, indeed, a terrible verisimilitude. The elegant Honeyman, that brisk Philistine F. Bayham, old Lockwood in 'The Virginians,' and the senile vivacity of Beatrix are all capital. One might contend, too, that Thackeray was less himself in sentimentalizing over youth and beauty, with their almost inevitable dependence on others, than in marking the tragi-comedy of forty years and beyond which Mr. Furniss renders so well, when life is no longer a plaything, and gradual deterioration is so easy.

While in general agreement with the accomplished critic noticing in these columns the other edition of Thackeray now in progress, the present writer is prepared as an old hand to justify his own views, and thinks there is ample room for both issues. In any case, he who neglects Mr. Furniss's will miss much which has not been found out before concerning Thackeray and which is well worth knowing, and concerning other things too. The artist's eye for the details which make the charm of beauty, male and female, is so keen as to be almost disconcerting to the social philosopher; while the purpose of a story like 'Catherine' leads to some free and excellent comment on the attention paid by the press and the drama to crime to-day.

A Roman Wit: Epigrams of Martial. Rendered into English by Paul Nixon. (New York, Houghton-Mifflin Company.)—Exuberant spirits, a tinge of transatlantic humour in phrase and turn of the thought, an agreeable fertility in rhymes—these are amongst the merits of Mr. Nixon's free version of the jests of Martial. On the other

hand, it must be admitted that he handles his galloping measures uncertainly, often clumsily; that he rarely succeeds in reproducing the lucidity and pungent force, to say nothing of the masterful ease, of the original; and that he seems now and then to miss his author's drift.

At times the translator's deafness to the claims of quantity and accent leads to excruciating results, such as:—

For my best plate, Cæcilianus, you then plead at once—
A'thenagoras' bereavement will explain, no doubt—
Iv'ry stands from top shelves bids them get.

Mr. Nixon succeeds best in the brief epigram: here it is hit or miss, the limits of a couplet or a quatrain excluding those metrical inequalities and feeble or awkward periphrases which in the lengthier pieces sometimes wreck the venture. We subjoin a sample or two of the happier attempts:—

KINDRED SPIRITS.

Cæcilianus never dines
Without a boar served whole;
Cæcilianus always dines
With one congenial soul.

WHERE WATER'S DEAR.

There's a shy old fox at Ravenna
Who cheated me of late;
When I ordered whiskey and water
He gave me whiskey straight.

NO RECOMMENDATION.

"Now Aper is a sober man;
He never had a jag on."
Well, what of that? I wish my slaves,
Not friends, to shun the flagon.

TO PRISCUS.

My ethical state,
Were I wealthy and great,
Is a subject you wish I'd reply on.
Now who can foresee
What his morals *might* be?
What would yours be if you were a lion?

But perhaps we can best judge Mr. Nixon's proficiency in this nice art by comparing one of his longer efforts—say, 'The Beau' ("Cotile, bellus homo es," &c., iii. 63)—with a version of the same epigram by Mr. A. E. Street of Eton ('Martial: 120 Selected Epigrams,' &c., Spottiswoode, 1907). Here, with the omission of one detail—"brachia volsa," l. 6—the substance of seven terse elegiac couplets is, by the Etonian, packed trimly and without crowding into a sonnet of Shakespearian form, while the rendering is exact throughout:—

My Cotilus, the world proclaims you beau,
But, prithee, what's your title based upon?
"The beau his curls will cunningly hestow,
And shed about him balm and cinnamon;
Will hum a snatch from Gades or the Nile,
And mark the tempo with a rhythmic sway,
In ladies' boudoirs the whole day will while,
To many an ear soft nothings will convey,
A thousand billets doux will interchange,
His neighbour's elbow like the plague eschew;
Know the last scandal, through the salons range,
Be master of the stud-book through and through."
Heavens! Cotilus, but then—but then—the beau
Has nothing but futilities to show.

In contrast to this neat, choicely worded translation Mr. Nixon's version runs to twenty lines, beginning,

You are everywhere thought just too lovely to live:
You must be: I hear and believe it;

while his rendering of l. 4 ("Balsama qui semper, cinnama semper olet")—"Of perfumes he mustn't be chary") is loose, and those of ll. 10 and 12 ("Pallia vicini qui refugit cubiti")—"Must be firm and precise with his tailor"; "Hirpini veteres qui bene novit avos"—"Each family tree through all years A.U.C. He must know from medulla to cortex") are wide of the mark. A comparison of the translators' several versions of iii. 60. ix. 68, xi. 18, &c., shows a like difference throughout in respect of brevity, closeness, and finish.

Mr. Nixon—who, it appears, "started" translating Martial in order "to prove to

certain bored Freshmen that the Romans were not at all times hopelessly austere and lofty" (what about Plautus and Terence, Catullus and Horace?)—confines his efforts to the *jocularia*. In one amazing instance ('Change and Rest,' p. 62; Mart., vi. 18) his predilection for jest has betrayed him into perverting a dignified and touching message of consolation into an irreverent and unfeeling jibe. "Lot" and "dot" (dowry), "there" and "caviare," "glad to see you" and "adieu," are specimens of poor rhymes.

The General Plan. By Edmund Candler. (Blackwood & Sons.)—We have enjoyed Mr. Candler's book of stories rather as scenes of travel than as fiction. The author has a keen eye for externals, and describes them in a manner to content the reader. He makes no attempt at penetration or analysis. His English characters are conventional, his Oriental hardly stand out from the background; and his plots are so trivial and perfunctory that more than once the present reviewer wished them absent. They are unworthy of the really excellent descriptions of Indian life and scenery which distinguish the book. Of the nine stories, all except the last possess great charm of atmosphere. The last, of which the scene is laid in South American wilds, is much inferior. 'Mecca' and 'Père Aillard' may be quoted as examples of the author's power and curious weakness. A practised writer in the field of travel, Mr. Candler seems merely to dally with the art of fiction.

THE six short stories in *The Hoofmarks of the Faun*, by Arthur Ransome (Martin Secker), are all more or less fantastic in conception and manner. The writing is somewhat pretentious, and the straining after preciosity a little over-obvious, which is due, perhaps, partly to the tales having been produced mainly in the author's boyhood and youth. They show the defects of self-consciousness and immaturity, but also certain imaginative qualities, where-with 'The Ageing Faun,' a really pretty, if slight example of the *conte bleu*, is markedly the best endowed.

IN the ten short tales, reprinted almost without exception from various periodicals, contained in *The Queen's Hand*, by Mrs. Baillie Reynolds (Mills & Boon), we are favourably impressed by a certain freshness of theme, or rather perhaps by the aspect of each theme selected for presentation. Thus 'The Queen's Hand,' the longest and most finished specimen of the collection, is a romance of the ordinary Ruritanian kind, which has become stale from frequent repetition, but the particular adventure which it chronicles is new to us; 'The Haunting of White Gates' and 'The Secret of the Sandhills' deal with what may be called unfamiliar phases of the supernatural; and 'Mrs. Amaury at Home' relates a peculiar, not to say improbable experience in the career of a suburban parson. The level of craftsmanship does not otherwise differ from that of the average magazine story.

IN *Love, and Extras* (Grant Richards), a volume compounded, it would seem, of fugitive scintillations which have already appeared in various journals, Mr. Frank Richardson does himself less than justice. His humorous methods when thus observed, as it were, in the bulk, are not stimulating, and derive no virtue from reiteration

Such exiguous store of hilarity as may once have lurked in the subject of whiskers has long ago been extracted and administered by Mr. Richardson to a patient public in amply sufficient doses; while the device which seeks to raise a smile by propounding to the reader incongruous medleys of well-known public characters can only succeed if there be something in addition to lend point to the proceeding. Again, we are apt to weary of the facetiousness which alludes (more than once) to eyeglasses as "nose-glasses," and to white-bearded old men as "polar beavers." As a welcome set-off to a rather monotonous ripple of frivolous chat we may mention the really funny series of "Gems Re-set," being brief parodies of popular writers, and two short stories of an excellent and cynical humour, called respectively 'That Beast Burgess' and 'The Curious Courtship of Abe Egg,' the latter a strange specimen of the American tongue. These are in Mr. Richardson's best vein; and we should be well pleased if he adhered to it—in lieu of his more favoured hobbies—when writing for the press. In the domain of allegory he is less happy, and we confess ourselves still in the dark as to the precise purport of 'Pierrot and the Rose.' Success in this vein is difficult to achieve.

A CONCISE dictionary of Scottish dialect for popular use has long been wanted. The want is now more felt than ever, for we fear the contention is well founded that thousands of Scotsmen do not know the meaning of half the Scots words used by Burns, to say nothing of Fergusson and Allan Ramsay. Moreover, many Scots words are rapidly passing out of use, and, as with the traditional folk-songs which have only an oral existence, it is well that they should be noted before the opportunity is lost for ever. For these and other reasons we give a cordial welcome to Mr. Alexander Warrack's *Scots Dialect Dictionary* (Chambers). Mr. Warrack had already shown himself peculiarly fitted for the compilation of such a work, having contributed over two hundred thousand quotations of Scottish dialect words with their readings to Prof. Wright's 'English Dialect Dictionary.' To that indispensable book, and, of course, to Dr. Jamieson's *Scottish Dictionary*, Mr. Warrack acknowledges a special obligation.

His Dictionary is, however, essentially a popular work. It avowedly contains, with a few exceptions, only modern Scottish words, taking no account of Early or Middle Scottish. The period covered stretches from the latter part of the seventeenth century to the beginning of the twentieth. The exceptions are such words as have survived the transitional time between Middle and Modern Scottish, and are found in the latter in their original or in a modified form. There are also included English literary words which have had, or now have, a dialect meaning in Scottish; as well as some phrases necessary for bringing out the meaning of certain dialect words. A great variety of sources has obviously been drawn upon, from dictionaries and glossaries down to "Kailyard" novels and humorous readings. Correspondence also has contributed a large quota, and we note with interest that a rural postman in Aberdeenshire takes an honourable place in this valuable work.

It is a pity, perhaps, that etymologies are not supplied. Many will certainly regret their absence; and indeed the definition of some words is unintelligible without an explanation of their origin. Thus we have "letter-gae," classically used by Allan

Ramsay, and here defined as "the precentor in a church." But why "letter-gae"? Because the term originated in the old days when the precentor had to "read the line" before singing it; in other words, to give out or "let go" ("gae") the letters. Again, take the word "bool," a boy's marble. Mr. Andrew Lang told not long ago how, as a Scots youngster of six, he went with his brother into an Oxford Street shop and asked for "bools," that being the only name he then knew for marbles. The assistant looked astonished, and replied that they did not keep "bulls" there. But "bools" shows the early influence of French on Scottish dialect, the origin of the word being evidently "boulet." Etymologies are really, in many cases, more interesting than the words themselves. But we readily allow that dialect etymology is "a dangerous and treacherous territory"; and probably, after all, the ordinary users of a dictionary like this will not miss it.

Lord Rosebery once said that no one is known to have read a dictionary through except Lord Chatham. He forgot Browning, and perhaps also Mr. Kipling, who declared on one occasion that he had "dredged the dictionary for adjectives." The present reviewer can testify to the pleasure he has received from perusing Mr. Warrack's Dictionary. Hundreds of long-forgotten words have brought back to him memories of young days in the country—words full of suggestion, the raw material, in fitting hands, of possible poems and histories. *Verbum sat sapienti*. We are pleased to note that the dedication is to Mr. W. A. Craigie, one of the editors of the Oxford English Dictionary.

The Parochial Registers of Saint Germain-en-Laye: Jacobite Extracts of Births, Marriages, and Deaths. Edited by C. E. Lart.—Vol. I. 1689–1702. (St. Catherine Press.)—Mr. Lart's Preface, with the account of the sufferings of the Protestant subjects of James II. at the Court of St. Germain, and of the cruelties of the Irish regiments against the Huguenots, is the most interesting part of his volume. The names of Jacobites in the registers are largely Irish, and the extracts may be useful to students of the genealogies of Irish Jacobite families. There are very few Highland names, and almost none of chiefs. The most novel fact which we can discover in the registers concerns Michael Middleton, who was taken, with Roy, Haliburton, and Dunbar, at Cromdale haughs, in 1691, and imprisoned in the Bass. The four captured the hold, and kept the standard of King James flying till, in June, 1694, they capitulated, marching out with the honours of war, and an indemnity, for all their abettors. Middleton survived for but a few months, and, as the registers show, was buried on December 9th, 1694. He was aged about thirty, and had received from James the title of Governor of the Bass. One or two of his gallant companions took French service, and appear in the list given in the old memoirs of Dundee.

A BIBLIOGRAPHY OF SHAKESPEARE.

Avonhwaite, Stratford-on-Avon, May 20, 1911.

MR. PACY's sudden zeal for bibliography has led him into a strange maze of error. He appears to possess an ardent faculty of assumption, for he finds upon inquiry (where?) "that the book is not printed at Stratford." For this information it is certain, I find, that he did not apply at the headquarters of the book, or he might have learnt that

a portion of the printing in connexion with it was executed in the poet's town. He might also have learnt why it was, and still is, virtually impossible to mechanically produce here in its entirety such a work. He might also have become conscious of what other librarians already know, that nine-tenths of all the books published are not printed on their publishers' office premises. Why that long-established custom should be considered "misleading" only the Librarian of the City of Westminster can explain.

Not only does the volume "purport to be published," &c. It was actually published at the Shakespeare Press of Stratford-on-Avon on the eve of the poet's birthday, 1911. Try as Mr. Pacy may, that fact is irreducible. It pleases Mr. Pacy to allege that the book has "slender connexion with Stratford." This is, perhaps, the unkindest and least truthful cut of all. Permit me to analyze Mr. Pacy's idea of the word "slender." As a pure matter of fact, the work originated in Warwick Castle, eight miles away; it was largely written in our Shakespeare Memorial Library, and was eventually completed here, including most of the proof-reading. It contains for the first time a printed record of about eight thousand Shakespearean volumes treasured in the Memorial Library and at the Birthplace, of about three thousand others in my own collection here, to say nothing of the huge collections at Birmingham, Warwick, and other adjacent spots. Above all, the book concerns Stratford's greatest native. It is a mere detail that both the presses in question are ennobled by the presence of many old books, and are, I trow, none the worse for being in such "doubtful" company. Mr. Pacy's appetite for "trifles light as air" may enjoy this further scrap of detail. The Shakespeare Press produced the first of its lengthy series of publications twenty years ago, while the Shakespeare Head Press was started by Mr. Bullen seven years since.

WILLIAM JAGGARD.

'AN ADVENTURE.'

May 17, 1911.

Will you permit a reader of 'An Adventure,' which you notice in your issue of May 6th, to add a remark on your difficulty about the cart and two labourers picking up sticks?

The point was to account for the presence of an old-fashioned cart and two men in antique garments on a particular day. I had the curiosity to refer the question to "Miss Lamont," and understand from her that the old accounts, preserved in the archives, give the name of the gardener—Boivinet—whose duty it was to hire cart and horse when required in the grounds for whatever operations, season after season. With regard to their occupation, it was specified on one occasion (January, 1789) as "ramasser les loques des chenilles et les brûler." It is or was quite usual to cut off the twigs with the *loques* upon them. In any case, if they were to be burnt, I should imagine that sticks must be a necessary corollary. But branches of trees are more often mentioned (I learn) as rubbish to be removed.

With regard to another criticism you make, though no doubt ten months might have sufficed for the "documentation," persons regularly engaged in professional

work often have to spread their investigations for private work over the holidays of many years, and, in fact, I happen to know that this was the case in this instance.

A READER OF 'THE ATHENÆUM.'

SALE.

ON Monday, the 15th inst., and the two following days, Messrs. Sotheby held a sale of books and manuscripts which included the following interesting items: Meredith's Works, a set of first editions, 40 vols., 1856-94, 40l. The Badminton Library, 29 vols., large paper, 1895-1902, 42l. The National Standard, &c., Nos. 1 to 57, containing contributions by Thackeray, 1833-4, 15l. 10s. Thomas Preston, A Lamentable Tragedy, n.d. (1569), 30l. Ackermann's Microcosm of London, 3 vols., 1811, 15l. Chaucer's Works, Kelmscott Press, 1896, 52l. Meredith's Poems, 1851, presentation copy to R. H. Horne, 61l. Gulliver's Travels, 2 vols., 1726, 79l. The Tudor Translations, 38 vols., 1892-1904, 25l. Westmacott, The English Spy, 2 vols., 1825-6, 25l. 10s. Account of the late Action of the New-Englanders under the command of Sir William Phips against the French, 1691, 21l. A collection of Civil War newspapers, 24 vols., 105l. The total of the sale was 1,848l. 6s. 6d.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Church of England Penny Manuals: 21, The Mormons, or Latter-Day Saints, by the Rev. Daniel H. C. Bartlett; 22, King George V. and the English Bible, with Extracts from Speeches in connection with the Tercentenary of the Authorized Version of the Bible, by a London Layman.

Davidson (Archbishop Randall Thomas), Captains and Comrades in the Faith, Sermons Historical and Biographical, 6/ net.

Dean (J. T.) Visions and Revelations: Discourses on the Apocalypse, 5/ net.

Elwin (Rev. Father), Thirty-Four Years in Poona City: being the History of the Panch Howds Poona City Mission.

New illustrated edition, entirely rewritten, enlarged, and brought up to date.

Fowler (W. Warde), The Religious Experience of the Roman People from the Earliest Times to the Age of Augustus, 12/ net.

The Gifford Lectures for 1909-10, delivered in Edinburgh University.

Gairdner (James), Lollardy and the Reformation in England: an Historical Survey, Vol. III., 10/6 net.

For notice of Vols. I. and II. see *Athen.*, Oct. 24, 1908, p. 499.

Hugh of St. Victor, Explanation of the Rule of St. Augustine, 2/6 net.

Translated by Dom Aloysius Smith.

Jeremias (Alfred), The Old Testament in the Light of the Ancient East: Manual of Biblical Archaeology, 2 vols., 25/ net.

Translated from the second German edition by C. L. Beaumont, and edited by Canon C. H. W. Johns. Part of the Theological Translation Library.

Legends of Indian Buddhism, translated from 'L'Introduction à l'Histoire du Bouddhisme Indien' of Eugène Burnouf, with introduction by Winifred Stephens, 2/ net.

In the Wisdom of the East Series.

Levens (Rev. J. T.), Aspects of the Holy Communion, 5/ net.

Each aspect being a partial expression of the complete truth, the author hopes that truth may be reached by the union of the various aspects.

Macdonald (Duncan Black), Aspects of Islam, 6/6 net.

The Hartford-Lamson Lectures for 1909, a volume intended to present to young missionaries an introduction to their new world.

Maclean (Douglas), The Great Solemnity of the Coronation of a King and Queen according to the Use of the Church of England, 5/ net.

With an introduction by the Bishop of Salisbury, and notes and excursions, liturgical, historical, and descriptive, by the author.

Orr (Emily C.), "Only a Boy": How Boys were Won, 4d.

Advocates classes for boys after they leave the Sunday school.

Richardson (Mrs. Aubrey), The Mystic Bride: a Study of the Life-Story of Catherine of Siena, 12/6 net.

With 10 illustrations. Stepping-Stones to Heaven: Daily Prayers for Boys and Girls, 6d net.

With 9 illustrations. Stubbe (Dr. Henry), An account of the Rise and Progress of Mahometanism, with the Life of Mahomet, and a Vindication of him and his Religion from the Calumnies of the Christians, 6/ net.

From a manuscript copied by Charles Hornby in 1705 "with some variations and additions." Edited, with an introduction and appendix, by Hafiz Mahmud Khan Shairani.

Words to Young Officers, an Address to Cadets at the Royal Military College, 4d.

Law.

Haring (Alex), Engineering Law, Vol. I. The Law of Contract, 17/ net.

Knocker (Herbert W.), The Special Land Tenure Bill of 1911: a Critical Analysis.

Has a preface containing some account of Gavelkind and Borough English by the Registrar of the Manorial Society of whose publications this forms Vol. V.

Mortimer (H. C.), The Law and Practice of the Probate Division, 42/

Muller (Franz), Trial of, 5/ net.

An account of the North London Railway murder trial of 1864. Edited by H. B. Irving as part of the Notable English Trials Series.

Smith (F. E.), International Law, 7/6 net.

Fourth edition, revised and enlarged by J. Wylie.

Fine Art and Archaeology.

Bourry (Emile), A Treatise on Ceramic Industries, 12/6 net.

A manual for pottery, tile, and brick manufacturers.

Elder-Duncan (J. H.), The House Beautiful and Useful: being Practical Suggestions on Furnishing and Decoration, 5/ net.

New edition, with many illustrations. Mawson (Thomas), Civic Art: Studies in Town-Planning, Parks, Boulevards, and Open Spaces, 50/ net.

Illustrated by 2 coloured plates and 275 drawings and photographs of English and foreign examples.

Thomas (Margaret), How to Understand Sculpture, 6/ net.

An artist's attempt to explain the principles which underlie her art, with 41 illustrations.

Poetry and Drama.

Chamberlain (Basil Hall), Japanese Poetry, 7/6 net.

Coulson (F. Raymond), This Funny World, 2/ net.

Short poems of a light character.

Esson (Louis), Bells and Bees, 2/6 net.

A collection of verses, most of which have appeared in Australian periodicals.

Gamble (Kathleen), Roses and Rue, 1/

A collection of poems. Housman (Laurence), Pains and Penalties: the Defence of Queen Caroline, a Play in Four Acts, 3/6 net.

A play that was last year condemned by the Lord Chamberlain, whose action led to a long discussion in the press.

Idyllia, 1/ net.

Twenty-five poems by the author of 'Thysia. Lang (A.), Ballades and Rhymes, from Ballades in Blue China and Rhymes à la Mode, 2/ net.

Part of Longmans' Pocket Library. Murray (T. C.), Birthright, a Play in Two Acts, 1/ net.

Vol. XIV. of the Abbey Theatre Series. Parry-Crooke (D. J.), Snowdrops and Daffodils, 1/ net.

Short verses from the pen of an idler. Penstowe (John), Po(e)t Pourri, 3/6

Short poems in a light vein. Sharpley (C. E.), For Crown and Country, 2/6 net.

A dramatic poem of Covenanting times. Spingarn (Joel Elias), The New Hesperides, and other Poems, 81 net.

Toplis (Grace), The Five Georges, a Pageant for the Times, 1/

While (J. H. Ernest), Rex et Imperator: Ode on the Coronation of their Most Gracious Majesties King George V. and Queen Mary, 2/6 net.

Second edition, with illustrations.

Music.

Wagner (Richard), My Life, 2 vols., 31/6 net.

Written by his wife at his dictation, and first circulated privately amongst the members of his family and his friends.

Bibliography.

Book-Prices Current, Part III., 25/6 annually.
A bi-monthly record of the prices at which books have been sold at auction.
National Library of Wales, Report of the Council on the Progress of the Library from April, 1909, to September, 1910.
Wigan Public Libraries, Quarterly Report, January to March.

Philosophy.

Jordan (David Starr), *The Stability of Truth: a Discussion of Reality as related to Thought and Action*, 3/6 net.
The substance of a course of lectures delivered on the John Calvin McNair Foundation, in the University of North Carolina, in January, 1910.

History and Biography.

Calendar of State Papers, Colonial Series, America and West Indies, 1701, preserved in the Public Record Office, 15/
Edited by Cecil Headlam.
Cassilis (Earl of), *The Rulers of Strathspey: a History of the Lairds of Grant and Earls of Seaford*, 6/
With 15 illustrations.
Dalton (Sir Cornelius Neale), *The Real Captain Kidd*, 5/ net.
A vindication of the "arch pirate" who was executed—unjustly, says the author—more than two hundred years ago.
Fisher (Joseph R.), *The End of the Irish Parliament*, 10/6 net.
Traces the history from the years of the first resident Viceroy, Lord Townshend.
Fortescue (J. W.), *British Statesmen of the Great War, 1793-1814*, 7/6 net.
The Ford Lectures for 1911.
Herkomer (Sir Hubert von), *The Herkomers*, Vol. II., 7/6 net.
For notice of Vol. I. see *Athen.*, Nov. 19, 1910, p. 631.
Jebb (Richard), *The Imperial Conference, a History and Study*, 2 vols., 25/ net.
Matcham (M. Eyre), *The Nelsons of Burnham Thorpe: a Record of a Norfolk Family*, compiled from Unpublished Letters and Notebooks, 1787-1842, 16/ net.
The author suggests that the present volume supplies a slight link between works dealing with Nelson's public career and the numerous memoirs that have dealt principally with one phase only of his later life. The volume has a photogravure frontispiece and 14 other illustrations.
Nicol (A. M.), *General Booth and the Salvation Army*, 6/ net.
With 12 illustrations.
Recollections of a Parisian (Docteur Poumiès de la Siboutie) under Six Sovereigns, Two Revolutions, and a Republic (1789-1863), 10/6 net.
Edited by his Daughters Mesdames A. Branche and L. Dagoury. Translated by Lady Theodora Davidson.
Stevenson (Robert Louis), *Letters of, 1868-94*, 4 vols., 5/ net each.
Edited by Sidney Colvin. A new edition with 150 fresh letters.

Geography and Travel.

Baedeker's London and its Environs, 6/ net.
Revised edition, with 10 maps, and 19 plans.
Great Eastern Railway Company's Tourist-Guide to the Continent, with Travel-Talk in German, French, and English, 6d.
Edited by Percy Lindley, with illustrations and maps.
Maurel (A.), *Little Cities of Italy*, 9/ net.
Rawnsley (Rev. H. D.), *By Fell and Dale at the English Lakes*, 5/ net.
A description of walks in the Lake District in Springtime, with 8 illustrations.
Taylor (G. R. Stirling), *An Historical Guide to London*, 6/ net.
Illustrated with 56 photographs.

Sports and Pastimes.

Fore'n'aft, a Weekly Newspaper for Yachtsmen, No. 1., May 18th, 3d.
Mainwaring (Major Arthur), *The A B C of Croquet*, 1/
With an introduction by Cyril Corbally.

Education.

Bagley (William Chandler), *Educational Values*, 5/ net.
The author maintains that education is, in the last analysis, a process of modifying conduct.

Folk-lore and Anthropology.

Avebury (Lord), *Marriage, Totemism, and Religion: an Answer to Critics*, 4/6 net.

Frazer (J. G.), *The Golden Bough: Part II. Taboo and the Perils of the Soul*, 10/ net.
Third edition.
Henderson (George), *Survivals in Belief among the Celts*, 10/ net.
Gives the substance of the author's first series of lectures in folk-psychology delivered in the University of Glasgow.

School Books.

Arnold's English Literature Series: Reade's The Cloister and the Hearth, abridged and edited by J. Connolly; and **Kingsley's Westward Ho!** abridged and edited by Edith Thompson, 1/6 each.
Intended for use as a reading-book at home and in school.
Baker (W. M.), and **Bourne (A. A.)** *A New Geometry*, 2/6
In the Cambridge Mathematical Series.
Chambers's New Commercial Arithmetic, by P. Comrie and W. Woodburn, 1/
The object of the work of which this volume forms Part I. is to provide a course of commercial arithmetic suitable for evening continuation classes, students on the commercial side of secondary schools, and private students. One of Chambers's Commercial Handbooks.
Florian (A. R.), *Second French Course*, 2/6
The text consists of extracts from 'Les Trois Mousquetaires', specially adapted and forming a complete narrative, with questionnaires, grammar exercises, and vocabulary.
Herbertson (A. J.), *Commercial Geography of the British Isles*, 1/
Third Edition. Another of Chambers's Commercial Handbooks.
Hooton (W. M.), *Inorganic Chemistry for Schools*, 3/6
With many illustrations.
Mignet (François), *Histoire de la Révolution Française jusqu'à la Fin de la Constituante*, 1/
In Siepmann's French Series for Rapid Reading.
Ping (Lilian G.), *Tableaux Mouvants*.
Short scenes designed to interest boys as well as to give them a vocabulary. In Dent's Modern Language Series.
Rippmann (Walter), *English Sounds: a Book for English Boys and Girls*, 1/
In Dent's Modern Language series.
Short French Readers: Daudet's La Mule du pape, et autres Contes; edited by T. H. Burbridge; **Erckmann-Chatrian's Le Trésor du vieux Seigneur**, edited by Miss Violet Stork; **Hugo's Le Bienvenu (Jean Valjean)**, edited by H. M. O'Grady; **Mémoires du Général Marbot**, edited by P. L. Rawes; **Töpffer's L'Affaire des Contrebandidiers**, edited by H. M. O'Grady; and **Von Riehl's Les Quatorze Saints**, edited by W. O. Brigstocke.
Strangeways (L. R.) and **Wood (R. S.)**, *Stories from Apuleius*, 2/ net.
Rewritten and adapted for the use of Middle Forms.
Talbot (J.), *Practical Physics: an Elementary Course for Schools*, 2/
With illustrations.
Topham (W. H.), *Elementary Light, Theoretical and Practical*, 2/6
Lectures and laboratory work suitable for a public School form, with many diagrams.

Science.

Bacon (Roger), *Opera: Part III. Liber primus Communium Naturalium Fratris Rogeri, Partes Tertia et Quarta*, 10/6 net.
Edited by Robert Steele.
Berry (Richard J. A.), *A Clinical Atlas of Sectional and Topographical Anatomy*, 42/ net.
Catalogue of the Lepidoptera Phalaenae in the British Museum, Vol. X. Plates CXLVIII-CLXXIII.
Duffon (J. T.), *Graph Template, for squared paper, English and Metric Scales*, 3d. net; with Instructions, 6d.
Green (F. W. E.), *The Hunterian Lectures on Colour Vision and Colour Blindness*, 3/6 net.
Johnson (J. P.), *The Mineral Industry of Rhodesia*, 8/6 net.
Treated from a geological point of view in order to emphasize the stability of the industry.
Jones (D. W. Carmalt), *An Introduction to Therapeutic Inoculation*, 3/6 net.
Lectures on Illuminating Engineering delivered at the Johns Hopkins University, October and November, 1910, under the joint auspices of the University and the Illuminating Engineering Society, 2 vols.
Both volumes contain illustrations.
Low (R. Cranston), *Carbonic-Acid Snow as a Therapeutic Agent in the Treatment of Diseases of the Skin*.

Macilwaine (Sydney W.), *Medical Revolution: a Plea for National Preservation of Health, based upon the Natural Interpretation of Disease*, 2/6 net.
Statistical Society, *Journal*, May, 2/6
Stonham (Charles), *The Birds of the British Islands*, Part XVIII.
With illustrations by Lilian M. Medland.
For notice of Part XVI. see *Athen.*, Aug. 20, 1910, p. 213.
United States National Museum: 1820, New Species of Shells from Bermuda, by William Healey Dall and Paul Bartsch; **1821, A Revision of Several Genera of Gymnospermous Plants from the Potomac Group in Maryland and Virginia**, by Edward W. Berry; **1823, The Recent and Fossil Mollusks of the Genus Cerithiopsis from the West Coast of America**, by Paul Bartsch; **1824, Notes on the Genus Lepomis**, by Barton A. Bean and Alfred C. Weed; **1828, Two Amphibians, One of them New, from the Carboniferous of Illinois**, by Roy L. Moodie.

Watson (John), *British and Foreign Building Stones*, 3/ net.

A descriptive catalogue of the specimens in the Sedgwick Museum, Cambridge.

Juvenile.

Prothero (Ernest), *Every Boy's Book of Railways and Steamships*, 4/6 net.
Contains 5 coloured plates and 62 other illustrations.

Fiction.

Bell (J. J.), *Jim Crow*, 1/ net.
The two principal characters are an artist's son, from whose name the title of the book is taken, and the oldest inhabitant of a village.
Bloundelle-Burton (John), *Under the Salamander*, 6/
A romance of France. The title of the book is taken from the badge of François I., worn by ladies of the Court on their arms or breasts and by men on the arm, and carved on the fronts of many of the royal châteaux.
Buchanan (Alfred), *Where Day Begins*, 6/
A tale dealing with Australia.
Caine (William), *The Devil in Solution*, 6/
A humorous story.
Curties (Capt. Henry), *The Silver Shamrock*, 6/
A story of apaches, police bureaux, and a hidden clue.
Diehl (Alice M.), *A Mysterious Lover*, 6/
At a village anniversary marked by a cricket match and dramatic entertainment, an aviator with an extraordinary bird-like aeroplane appears. The story also hints at a remarkable discovery in aviation.
Hyne (C. J. Cutcliffe), *The Escape Agents* 6/
Another story of Capt. Kettle.
Leacock (Stephen), *Nonsense Novels*, 3/6 net.
Mordaunt (Eleanor), *A Ship of Solace*, 2/ net.
The cruise of two ladies in a sailing ship, ending in Australia.
Simpson (Violet A.), *In Fancy's Mirror*, 6/
A modern story of love complications.
Sinclair (May), *The Divine Fire*, 2/ net.
New edition.
Stanton (Coralie) and Hosken (Heath), *The Muzzled Ox: a Romance of Riches*, 6/
The story of a dethroned queen and her missing necklace, which is of great value and historic interest.
White (Fred M.), *The Four Fingers*, 6/
Mystery surrounds the mummified fingers of a man's hand, which turn up at the most unlikely times and in the most unexpected places.

General.

Abbott (G. F.), *The Philosophy of a Don*, 5/ net.
The characteristic traits of two radically opposed temperaments are emphasized through a series of dialogues in which the aristocratic "Don" is brought into friendly collision of thought and feeling with the democratic "Shav."
British Dominions: their Present Commercial and Industrial Condition, 6/6 net.
A series of general reviews for business men and students, edited by W. J. Ashley. Of the nine addresses included in the volume, eight were delivered during the winter of 1910-11, under the auspices of the University of Birmingham, to audiences of business men and students.
Crawford (Virginia M.), *Switzerland To-day: a Study in Social Progress*, 1/ net.
Encyclopaedia Britannica, Eleventh Edition, Vols. XV.-XXVIII.

Goldie (M. H. G.), *Trade and the National Ideal*, 2/6 net.

Sets forth nine propositions, with some of which we cannot express our agreement, but is nevertheless useful in drawing attention to principles which are at the root of commercial transactions.

Greenwood (Arthur), *Juvenile Labour Exchanges and After-Care*, 1/ net.

With an introduction by Sidney Webb.

Literary Gossip.

The *Cornhill Magazine* for June includes 'The Keys of all the Creeds,' an Indian study by Major G. F. MacMunn, and 'The Two Novelists: a Letter from Thackeray,' which is contributed by Miss Flora Masson, and contains Thackeray's views on the work of Dickens. Short stories are 'Dear Old Cecil,' by Judge

Parry; 'Lop Ears,' by Dorothea Deakin; and 'In the Val d'Or,' by Mr. C. H. Cautley. In 'The Leaves of the Tree' Mr. A. C. Benson writes on Henry Bradshaw, the Cambridge Librarian. 'At the Sign of the Plough' contains the answers to the paper on Sir Walter Scott, by Mr. Andrew Lang, and questions on R. L. Stevenson by Sir Arthur Quiller-Couch.

THE June *Blackwood* opens with a Coronation ode, 'The Sceptre with the Dove,' by Mr. Alfred Noyes, which is followed by an article on 'The Coronation.' 'The Tercentenary of a Great Captain,' by Brigadier-General Scott-Moncrieff, recalls the career of Gustavus Adolphus; 'An Argentine Love Drama,' by Mr. David Hannay, tells the story of the loves of Camila O'Gorman and Ladislao Gutierrez, who were done to death by the tyrant Rosas; and in 'A Born Rebel' Mr. W. J. Hardy gives a sketch of the life of Wolfe Tone. Other articles in the number are 'The Burden and Heat,' by 'Linesman'; 'A Word for the Turks,' by 'Ben Kendim'; an amusing sketch, 'The Patwari and the Peacock,' by Mr. R. E. Vernede; and 'Musings without Method.'

MISS ANNETTE M. B. MEAKIN has written a biographical study of Hannah More, which Messrs. Smith & Elder are publishing in the autumn. Miss Meakin is anxious to learn the whereabouts of the original portraits of Hannah More, painted, the one by Miss Reynolds, sister of Sir Joshua, in 1780, the other by Opie in 1786.

MESSRS. METHUEN will shortly publish for Mr. Francis Watt a work on 'Edinburgh and the Lothians.' Special attention is given to the literary annals and memories of Edinburgh and the places about it, both in ancient and modern times.

MESSRS. KEGAN PAUL are publishing a translation of Prof. Hartmann Grisar's 'History of Rome and the Popes during the Middle Ages.' The bulky first volume of the German original will be divided into three in the translation, which will include illustrations printed apart from the text, so as to avoid the use of glazed paper throughout.

THE MARGARET STOKES MEMORIAL LECTURES at Alexandra College, Dublin, were this year delivered by Mr. E. C. Quiggin on the 16th, 17th, and 18th inst. The lecturer took as his subject 'The Poetry of the Irish Bards, 1200-1500.'

MR. J. F. ROWBOTHAM has a new poem in the press, entitled 'The Epie of God and the Devil,' which will be published in July.

MR. J. W. GILMER, who has been associated with Mr. Heinemann's firm for the last sixteen years, has been appointed managing director of Sprigg, Pedrick, Ltd., who have taken over the Literary Agency business of Sprigg, Pedrick & Co., Ltd. The new business is being carried

on at the old address, 110, St. Martin's Lane, and Mr. Gilmer takes up his post on June 1st.

MR. WILLIAM HOLLOWAY writes concerning a phrase in our review last week of 'Revolutionary Ireland':—

"May I correct a strange error of your reviewer's? It was not Charlotte Corday, as he seems to think, but Madame Roland who exclaimed, 'O Liberty, what crimes are committed in thy name!' The sentiment is in harmony with all that we know of Madame Roland, a moralist and political philosopher, but quite foreign to a nature like that of Charlotte Corday. We know from Charlotte Corday's latest biographer that not a word passed her lips after she mounted the bloody tumbril."

THE postponement until November of the sale at Messrs. Sotheby's of the books forming the Huth Library is not altogether a surprise. The catalogue is likely to be the finest of its kind ever produced in this country, and worthy of the high standard of the firm in such matters.

MESSRS. GOWANS & GRAY write:—

"We shall issue shortly a translation of that great German novel 'Between Heaven and Earth,' which was written in 1856 by Otto Ludwig. We have tried vainly to trace a previous English translation which, according to Herr Adolf Stern, was published within two years of the appearance of the original, and shall be very grateful to any of your readers who can tell us in what form and by whom it was issued."

DR. ALBERT ZACHER, whose death at the age of 50 is announced from Rome, was one of the foremost authorities on the political and intellectual life of modern Italy and questions connected with the Vatican. The son of a workman, he succeeded in spite of many difficulties in taking his degree, and his appointment as tutor to the grandchildren of Sonnemann, the founder of the *Frankfurter Zeitung*, led to his becoming a member of the staff of that paper. He rapidly made his mark, and in 1895 became its correspondent at Rome, a post which he held at his death. Among his chief works are 'Römische Augenblicksbilder,' 'Aus Quirinal und Vatikan,' 'Was die Campagna erzählt,' and 'Rom als Kunststätte.'

THE death is reported from Padua of Dr. Francesco Bonatelli, Professor of Theoretic Philosophy at the University of that town, and for some time co-editor with Prof. Mariani of the paper *La filosofia delle scuole italiane*.

AMONG recent Government Publications of some interest we note: Report on Imperial Education Conference (post free 1s. 4d.); Chronological Index to Statutes, 1235-1910 (post free 11s. 2d.); Calendar of State Papers, America and West Indies, 1701 (post free 15s. 7d.); Education, Special Reports, Vol. XXIV., Secondary and University Education in France (post free 3s. 4d.); Educational Endowments Report (post free 6½d.); and Calendar of State Papers, Ireland, 1669-70 (post free 15s. 6d.).

SCIENCE

OUR LIBRARY TABLE.

THE third and fourth sections of *The British Bird Book*, edited by F. B. Kirkman (T. C. & E. C. Jack), go far to reconcile us to this enterprising departure from the cut-and-dried methods of the more orthodox compiler. For the bulk of the letterpress we are this time indebted to the editor himself and to Miss E. L. Turner, and one could imagine that many passages, especially from the pen of the latter, have been actually written in the open air. There is a pleasing originality, for instance, about Mr. Kirkman's rough map showing half a dozen adjoining robins' estates, to illustrate a series of observations which extended through the autumn and winter.

His inquiry began in August, but it was not till November that he was sure of his facts.

"On examining this plan," he writes, "it will be noted that the boundaries between the feeding areas are nearly everywhere imaginary lines, and that they overlap. Each robin clearly recognized to within a yard or two the position of his boundary, and made the fact quite clear to any robin who did not. Each had, indeed, a firm belief in the sacred rights of property—his rights, not the other fellow's—and enforced the same with the utmost vigour."

A more difficult matter still, but even more interesting, the author has not yet been able to watch with the same closeness—"the break-up of the winter territorial system under the compelling influence of spring."

Particularly good are the notes on the dipper, standing as it does in a class by itself among British birds. From the pages of *Country Life* a long account is quoted of the domestic life of one pair, including some thrilling adventures with a hawk. Attention is directed to a curious structural peculiarity—

"its use, not only to protect but to clean the eyeball, of the upper eyelid, instead of the transparent third eyelid, the so-called nictitating membrane. In the case of the dipper, this membrane appears to have fallen into disuse, its function having been taken over by the upper eyelid."

The latter is of great strength, increased by a covering of tiny white feathers, which renders it conspicuous when the bird blinks. This blinking habit was noted by Mr. Finn in his observations on a dipper in captivity, and we have ourselves been struck by it when we were attempting a photograph at close quarters. How this development is eminently adapted to its feeding habits is carefully explained. The author observed that when the young are fed, they uttered their cry after, and not before, receiving the food; the same thing we have found to be true of nuthatches, whatever significance it may have.

With regard to fieldfares, the suggestion has been quoted, but not corroborated, that when they roost in trees they only do so under stress of snow or storm. Our own experience does not bear this out, as we have watched a number of these birds roosting in a copse night after night, irrespective of changes of the weather. Miss Turner discourses in her usual attractive manner of the characteristics of warblers, her intimate knowledge of their ways having been

acquired at first hand. The two white-throats, blackcap, and garden warbler are taken in one group. It is a common experience to be unable to differentiate between the songs of the garden warbler and blackcap, but Miss Turner shows that the same *motif* runs through the melody of the quartet, and declares that at times she has herself mistaken the song of the common whitethroat for that of the garden warbler. She writes too:—

"One April day, while hidden in order to photograph blackbirds [*sic*], a garden warbler, unconscious of my proximity, discoursed sweet music to me all day. The song was liquid and rapid, and at times he wove into it many of the blackbird's notes, so that I had to make an extra slit in my tent and satisfy myself continually as to the identity of the songster."

The plates of eggs are of average excellence, and we distinctly like most of the coloured illustrations. In that of the blackcap the superscription is at fault, the female in the picture being overlooked.

Personality and Telepathy. By F. C. Constable. (Kegan Paul & Co.)—Mr. Constable says that the first part of his book "is separable from the second and third parts," and permits the reader who is not metaphysical to skip the first part. We accept this grace with enthusiasm. As to telepathy, the thing needful is first to convince scientific characters that there is such a thing in nature. A scientific character (in America) says he will believe in telepathy when the performance can be announced beforehand, and demonstrated by experiment in a psychological classroom at a given day and hour. Other thinkers hold that any such demonstration would certainly be a vulgar imposture.

In the meantime we will grant to Mr. Constable that there is something in nature which answers to the name of "Telepathy," though perhaps "syntelepathy" would be a better term. How is the process worked? In the words of the poet, "It is all the Subliminal Self." Mr. Constable prefers to say: "I make the human personality (the subject or psychological 'I') a partial and mediate manifestation in our universe of a spiritual self. I term this spiritual self an intuitive self."

As far as we can presume to understand, this is merely Myers's "subliminal self" under another name. But Myers, who did not live to make a final revision of his book 'Human Personality,' used the term "subliminal self" in two, if not three distinct senses. (Mr. Constable notices two on p. 125, a third on p. 148.) The consequence is that "every puny whipster gets his sword," in controversy. Mr. Constable, or rather the Society for Psychical Research, is not much more consistent, if Henry Sidgwick really said that "the S.P.R. had arrived at the important conclusion that"—telepathy exists (p. 107), while (p. 121) "the S.P.R. regard telepathy, not as a fact proved, but as a fact which has to be proved." These two statements are not consistent; and we have always understood that the S.P.R., as a corporate body, holds no opinions whatever about any of these subjects, any more than does the M.C.C.

The most interesting things in books of this kind are, of course, the "cases," the anecdotes. Mr. Constable gives them without corroboration, which we must hunt for laboriously in the sources to which he refers us. Thus (p. 149) the story of a boy of fourteen, an Infant Phenomenon, in his school cricket eleven (the name of the school is easily guessed), who "cut" an important

match because he had a fit of depression and a dream, went home, and found his father dead, needs corroboration. Not many cricketers of fourteen, or of any age, would desert their team for psychical reasons. No man ought to do it. A man well known in law and literature, after experiencing two verified premonitions, had a third, left a dinner party at the fish, and went home because he felt that his house was on fire. It was not on fire! Mr. P. F. Warner, say, would not be justified in deserting a Test match, or even a Middlesex match, on the strength of a dream. We are convinced that no sportsman would let dreams interfere with duty. We knew a golfer who had been present when three persons, including his wife, were brought from various quarters into one house by premonitions of a terrible accident. The accident occurred; later, the golfer indulged in a premonition through the first half of a round. He sped home from the ninth hole; but nothing had occurred to justify in the slightest degree his pusillanimous conduct. Both of these anecdotes are at first hand.

A strong sense of moral duty has distracted us from our argument. The story of that boy of fourteen should be verified from his school scoring books, and from the announcement of the date of his father's death in *The Scotsman* or *The Glasgow Herald*. As for the story (p. 133) of the trousseau and the widow's mourning, it is of a common type of dream, though backed by a coincidence. An extremely "remote" story—a man's memory of a story told to him by his father long ago—is not worth quoting. As it happens, by a coincidence quite fortuitous, the father of the present reviewer told him, long ago, the tale of his own experience of a precisely similar phenomenon—an unseen hand grasping his own hand, while in bed. "Nothing happened." There was no coincidence in the second case, though there was in Mr. Constable's anecdote.

Mr. Constable's theory is that

"the percipients receive intuition of what is happening to the agents, and that intuition gives rise to ideas, related to the intuitions, but false in detail, because of the fallible or imaginative working of the understanding of the percipients."

"The intuitive self" is the instructed self, the "understanding" is "the man in the street." But when "the intuitive self" sends to the "understanding" a purely fallacious intuition, who is to blame? Moreover, as dogs certainly are given to telepathic experiences, are we to conclude that a dog has a "spiritual self" or "intuitive self"? It is a conclusion which we welcome.

As against Sir William Crookes's theory of brain-waves which do not lose energy on account of distance, Mr. Constable argues that such waves cannot have "material centres of origin"; for, if they had, they would be pulled up short by "the law of inverse squares," concerning which Sir William refuses to "say anything disrespectful." Mr. Constable's theory of omnipresent sensibility is, in his own opinion, an extension of, and not in opposition to, Sir William's suggestion.

As to what used to be called "travelling clairvoyance," it is "phenomenal travel of the intuitive self, not of the human personality" (p. 178). This means, we suppose, that the intuitive self gets at information about remote places and facts, which the ordinary personality could only get at by travelling. But there is an objection, as Mr. Constable sees, raised by the two anecdotes given on pp. 180-82. (The reviewer, as it happens, obtained both of these tales

at first hand, signed by all the persons concerned, with corroborative evidence.) The persons who "psychically travelled" were in one case heard, in the other seen and heard, by persons in the houses to which they travelled, not in the body. In the second instance the entry of the traveller was accompanied, in the hearing of the person who also saw him, by the sound of the shutting of the front door!

Thus it seems that the intuitive or spiritual self can either use an intuitive latch-key and open and shut a front door, or the spiritual self can affect a percipient with the hallucination that this has occurred. Mr. Constable decides that "the agent must affect space in some way akin to a material affection of space" (p. 178). But in that case the agent works, like Sir William Crookes's brain-waves, from a material base. Cases of telethoryby (noises caused from a distance) are very common in Glencoe and in Scandinavia. In one instance (American) the rows in a house ceased as soon as the former owner, a dipsomaniac at a distance, expired. His intuitive self could do no business except from a material base, but this may not be a universal disability. Of course the terms "matter" and "spirit" are mere paper currency of "the understanding"—which, in this case, does not understand.

It cannot be said that we "get any forrarder" with Mr. Constable. His book is destitute of an Index; we cannot be certain that he *never* mentions Hegel. But Kant is constantly cited, and, if Kant rejected telepathy, Hegel, quite as great a philosopher, accepted (to quote a metaphysician whose style is colloquial) "the whole psychical bag of tricks."

As to haunted houses, Mr. Constable says that "the hauntings do not for the most part . . . conduct themselves as being related to present passing events." Perhaps "for the most part" they do not; but they do, occasionally, "take notice," and resent being pursued and cornered. Mr. Constable's explanation of "hauntings" is not to us intelligible: "Their conduct in general impresses itself on the forms of the houses, and these impressions have been lasting in time" (p. 296). What does this mean? How can the conduct of some person now dead impress itself on chairs which have been brought in since his decease by new occupants, so that the person is seen sitting on this or that chair? And even if the old furniture is kept, how can we conceive of a chair as affected by the conduct, or misconduct, of a man or woman long dead? We do not know when or where the Highlander that haunts Castle X. lived and died; but he takes a chair with perfect aplomb. Of course it is admitted by the members of the family who have most closely studied his ways that he may be a Brownie, but Mr. Constable throws no light on Brownies.

Yellow Fever and its Prevention. By Sir Rubert W. Boyce. (John Murray.)—This is another of the interesting and valuable books in which Sir Rubert Boyce deals with a mosquito-borne disease and seeks to make the public acquainted with the latest advances of tropical medicine. The present volume is designed to prove that many of the fevers which go by various names on the West Coast of Africa are really yellow fever. The same prophylaxis, therefore, is needed as in the West Indies and Central America, and its adoption would be followed by equally happy results. But it is extremely difficult to convince the older medical men of this truth, and many of

the officials and merchants appear to have entered into a conspiracy of silence on all matters pertaining to the subject of yellow fever. The disease is allowed to smoulder, and it is only when a serious outbreak occurs that active measures are taken to arrest it.

The book is a complete monograph upon yellow fever, and it contains an excellent Bibliography. The disease is considered from the standpoint of its history, geography, pathology, diagnosis, treatment, epidemiology, entomology, and prophylaxis. The volume is well illustrated, many of the photographs having appeared in the companion volume, 'Mosquito or Man'; and there is a good Index.

THE SANITARY COMMISSIONER'S REPORT ON INDIA FOR 1909.

THE time may come when the Sanitary Commissioner's Annual Report will be regarded as the surest test of the efficiency of British rule in India, and it would not be surprising if the year 1909 were selected as a starting-point, on account of the notable improvements effected during its course in grappling with some of the most formidable diseases from which the peoples of India have long suffered. The grand total of deaths shows a remarkable decline. There were only 6,998,044 deaths from all causes, as against 8,653,007 in 1908, and 8,117,771 in 1905, when the population was considerably less. Nearly a million fewer persons died from fevers, and over a quarter of a million fewer from cholera, as compared with the previous twelve months. In dealing with fever, which, as has been several times pointed out in these columns, is the real scourge of India, one of the chief causes of the improvement has been the free distribution and sale of quinine. Postal officers and schoolmasters are employed in order to bring the drug as it were to the door of every dwelling. Quinine is retailed in small packets for a pice, and as the quantity originally allowed was too small to be efficacious, the dose has been increased. Increased facilities for vaccination have also kept down the mortality from smallpox.

On the other hand, the birthrate showed a slight falling-off. There was a total of 8,298,379 births in a population of 226,394,326, which gives a rate of 36.65 per thousand—the average for the quinquennial period having been 38.64. If there had not been an exceptional decline in the Punjab and the United Provinces, due to the prevalence of malaria in the previous year, there might have been no decrease at all.

The good health of the general community during the year extended to the Army. There was a remarkable improvement under all classifications. The death-rate was only 6.25 per thousand, as compared with 9.78 in 1908; and the invalided figure at 9.07, against 15.64 in the previous year, and an average as high as 27.91 for the preceding quinquennial period. This astonishing improvement is due to the more successful combating of enteric fever.

The statistics of health for the Native Army were also very favourable. The death-rate was only 5.62 per thousand, and there was a material decline in the total of men invalided for discharge. There were only five suicides, as compared with an average of eleven for the quinquennial period. The practice of allowing men suffering from minor complaints to return

on sick furlough to their homes has worked very well.

A matter of salient interest in the Report is the reduction in deaths from enteric fever. The causes of the dissemination of this dread disease are beginning to be fathomed, and, instead of experiments, measures are being taken founded on the firm basis of knowledge derived from investigation. It is proper to recognize that Prof. Koch inaugurated the new system by his brilliant discoveries in treating the disease in Alsace-Lorraine in 1903. The pages of the Report dealing with this matter make interesting reading, but the remedy, it may be said, lies chiefly in the direction of eliminating bacilli-carriers. The work of the Central Research Institute at Kasauli and the different laboratories is also passed in review. At one of these an alleged antidote for snake-bite from Mexico was tested, and "found to be worthless."

SOCIETIES.

ROYAL.—May 18.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'The Properties of Colloidal Systems: II. On Adsorption as preliminary to Chemical Reaction,' by Prof. W. M. Bayliss,—'Inbreeding in a Stable Simple Mendelian Population, with Special Reference to Cousin Marriage,' by Mr. S. M. Jacob,—'On the Direct Guaiacum Reaction given by Plant Extracts,' by Miss M. Wheldale,—'Transmission of Amakebe by means of *Rhipicephalus appendiculatus*, the Brown Tick,' by Dr. A. Theiler,—'On Distribution and Action of Soluble Substances in Frogs deprived of their Circulatory Apparatus,' by Mr. S. J. Meltzer,—and 'The Discrimination of Colour,' by Dr. F. W. Edridge-Green.

GEOLOGICAL.—May 10.—Prof. W. W. Watts, President, in the chair.—Messrs. H. S. Bion, J. S. Freeman, H. Milton, R. E. Nicholas, H. H. Riddale, and E. Taylor were elected fellows.—The following communications were read: 'The Lower Carboniferous Succession in the North-West of England,' by Prof. E. J. Garwood,—and 'The Faunal and Lithological Sequence in the Carboniferous Limestone (Avonian) of Burrington Combe, Somerset,' by Prof. S. H. Reynolds and Mr. A. Vaughan. Mr. S. Hazzledine Warren exhibited a piece of worked wood, possibly the point of a palæolithic spear. It measured 15½ inches in length and 1½ inches in thickness; one end had been carefully fashioned to an acute point, the other end was broken. Mr. Warren said that he had recently dug it out of an undisturbed part of the freshwater deposit of Clacton-on-Sea. This deposit yields remains of *Elephas antiquus*, *Rhinoceros*, and other Pleistocene mammalia in abundance, as also palæolithic flint implements, some of which were exhibited. The contemporaneity of the pointed shaft with the Pleistocene deposit in which it was found was confirmed by the fact that it agreed in condition with the wood that is extremely plentiful in the same bed. It also had calcareous encrustations upon its surface, such as were seen on other remains from this deposit.

SOCIETY OF ANTIQUARIES.—May 18.—Dr. C. H. Read, President, in the chair.

Mr. Oswald Barron read a paper on a grant of arms, lately discovered among the Eton College charters, made in 1347 by Ralph, Baron of Stafford, to his cousin Edmund of Mortayn. Apart from the interest which belongs to an original document of this character, the grant offered several peculiar features. Although a crest is given with the arms, the grantee was in priest's orders, a canon of Lincoln, a parish priest, and a doctor of civil law. Also as the head of a family long bearing arms, he had no need of a new coat. The blazon was remarkable, affording, in Mr. Barron's opinion, evidence for his contention that the words "bend" and "baston" are interchangeable, although the latter was commonly used when the bend, surmounting other charges, took a narrow form in order to allow them to be distinguished. The grant, following mediæval customs in such cases, was in the terms of an ordinary legal conveyance of real property.—The discussion which followed the reading of the paper

dealt with the mediæval debating of the question whether arms belonged to the blood or to the estate.

Mr. H. S. Cowper exhibited a skeleton clock with iron works, an Elizabethan sword, a seventeenth-century roasting jack, and a thirteenth-century lead seal. Mr. Aymer Vallance exhibited two sixteenth-century clocks, and Col. Croft Lyons three seals; and Mr. Lyon Thomson a stoneware plaque, by Coade, from St. Olave's School, Southwark.

ROYAL NUMISMATIC.—May 18.—Sir Henry H. Howorth, President, in the chair.—Prof. H. Browne and Messrs. W. Longman, Coleman P. Hyman, and H. Oppenheimer were elected Fellows.

Exhibitions:—Mr. W. E. Marsh, a penny of Henry VI. of the Calais Mint, of the transitional type from the "anulet" to the rosette-masle coinages; Mr. Bernard Roth, an ancient British quarter stater (Evans, E. 5) from Bognor, and a half and third stater of the Unelli; Mr. H. Garside, a pattern half-crown of 1875 of the type of the crown, and a set of the 1911 Maundy money; Mr. F. A. Walters, a bronze medallion of Tiberius, struck at Clypæa in North Africa, by P. Cornelius Dolabella, A.D. 23; Mrs. Cripps, a series of coins of Carausius found at Cirencester, all of very rare or unpublished reverse types, with legends "Adventus Aug." (Emperor on horseback), "Provid. Augusta" (Providentia seated), "Leg. XX. Ulpia" (boar), &c.

Mr. G. C. Brooke read a paper entitled 'Notes on the Reign of William I.,' in which he gave the results of his comparison of the dies of a large series of coins. A coin of William I., recently attributed to the mint of Berkeley and supposed to be unique, was found to be struck from the same dies as a coin in the British Museum which showed Exeter to be the correct attribution. A comparison of the obverse dies of the coins of this reign had produced results which might be arranged in three classes.

The first showed one obverse die in conjunction with two or more reverse dies of the same moneyer at the same mint. By comparison of such coins doubtful attributions could be verified and corrected; for example, halfpennies on which the mint is missing had been thus assigned to their mints. A coin reading "Spræclinc on Ci," having the obverse struck from the same die as a Winchester coin of this moneyer, should probably be assigned to Winchester instead of Chichester, the first three letters (Win) of the mint having been omitted by an engraver's error; a similar ellipse might be seen on a coin reading "Godesbrand on C" (for Sc), having the same obverse as a coin of the same moneyer reading "on Scf" which showed the mint to be Shaftesbury.

The second class showed several instances of an obverse die used at the same mint by two or more moneyers. This enabled one to locate doubtful moneyers, e.g., Cnihtwine, who had been attributed to St. Edmundsbury, was shown to have used the same die as moneyers of Shaftesbury, at which mint he doubtless worked; a Godesbrand was working at both Shaftesbury and Shrewsbury, one using the abbreviations Scf, Sc, C (for Shaftesbury), with obverse dies used on Shaftesbury coins of other moneyers, and the other Sri, Si (for Shrewsbury), in conjunction with an obverse die used by Shrewsbury moneyers.

The third class showed an obverse die to have been sent from one mint to another in the following cases (the earlier mint to use the die in each case was ascertained by the growth of rust and the appearance of scratches or other flaws on the die by the time its latest coins were struck):—Barnstaple to Exeter, Canterbury to Hythe, Guildford to Chichester, Marlborough to Salisbury, Salisbury to Marlborough (this obverse die was used in conjunction with a reverse which had previously been used with the preceding obverse), Salisbury to Wilton, Wilton to Salisbury, Cricklade to Wilton, Shrewsbury to St. David's, London to Southwark, all these being of the "Paxs" type; also one of the "Pavilion" type from London to Exeter. Another die of the "Paxs" type, used at London and Ipswich; one of the "Bonnet" type, used at London and Thetford; and another of the same type, used at Thetford, and an uncertain mint (reading "Maint"), gave no proof of the mint which was the first to use them. The cases where London was one of the mints involved might be explained as instances of the practice, mentioned in Domesday, of sending dies from London to the provincial mints after a change in the type, a die already used being sent, possibly to save the time needed to engrave a new one. The other cases seemed to show that it was possible for the moneyer to borrow or purchase a die from a

moneyer of a neighbouring mint, as in each case the two mints which a die served were in close proximity, except Shrewsbury and St. David's—and Shrewsbury was the nearest, or most accessible, mint to St. David's, as the roads then lay. This would seem to militate against the old theory of all dies being sent from London—a theory based on passages in Domesday which said no more than that this was done when there was a change in the money, and supported by the similarity of work seen in coins of all mints, a fact which might be merely due to the careful, almost mechanical, copying of the original dies. Reproductions of mistakes showed dies to be copied carefully, and, in some cases, ignorantly; and coarse-cut dies, commonly called "local work," could be explained as the productions of inexperienced workmen. Traces of alterations of dies were interesting, and three such dies seemed to point to an extensive system of forgery by one London moneyer, who struck coins of each of the first three types of the reign with dies on which he had partly obliterated his name and made that of the mint resemble another mint (Exeter and Canterbury), probably in the hope of avoiding detection while he issued coins of low weight. His name was not known on coins later than this third type, which perhaps showed that his forgery was discovered.

Mr. A. H. Baldwin said that in his "long-cross" issues of Henry III. three out of four moneyers at Northampton used the same obverse die.—Mr. L. A. Lawrence suggested that dies might have been made in London, and a puncheon used for making obverse dies, in which case coins made from two obverse dies that were made from the same puncheon would have the appearance of being struck from the same die.—Mr. Brooke, in reply, said that in the cases to which he had referred traces of rust and other flaws showed the coins to be struck by one die, and not by two dies made from one puncheon.

ZOOLOGICAL.—May 9.—Mr. E. G. B. Meade-Waldo, V.P., in the chair.—Mr. R. I. Pocock exhibited some of the hair of the "puppy coat" of a grey seal (*Halichoerus grypus*), which was caught at Barmouth, in Merioneth, at the end of April.—Mr. E. G. Boulenger exhibited some living male specimens of the midwife toad (*Alytes obstetricans*), carrying the eggs. He also exhibited a number of the detached eggs to show the manner in which they were strung together.—Mr. A. E. Anderson exhibited a large number of photographs of the more important fossil mammals in the Department of Vertebrate Palæontology of the American Museum of Natural History, New York, showing the methods of mounting fossil skeletons.

Dr. P. Chalmers Mitchell gave an account, in the absence of the author, of a memoir by Lieut.-Col. Neville Manders on the phenomena of mimicry amongst butterflies in Bourbon, Mauritius, and Ceylon.—Mr. R. I. Pocock read a paper on 'The Palatability of some British Insects, with Notes on the Significance of Mimetic Resemblances.'—Prof. G. C. Bourne read the second portion of his paper on 'The Morphology of the Group Neritoidea of the Aspidobranch Gastropods,' which dealt with the Helicinidae.—Mr. J. J. Lister presented a paper entitled 'On the Distribution in the Pacific of the Avian Family Megapodidae.'

METEOROLOGICAL.—May 17.—Dr. H. N. Dickson, President, in the chair.—Dr. H. R. Mill and Mr. C. Salter read a joint paper 'On the Frequency and Grouping of Wet Days in London.'

Mr. E. Mawley read his 'Report on the Phenological Observations for 1910.' The most noteworthy features of the phenological year ending November, 1910, as affecting vegetation, were the continuous and heavy rainfall in February, a sudden change from cold to warm weather in the middle of May, the great dryness of September, and the heavy rains and low night temperatures in November. During the greater part of the year wild plants came into blossom behind their usual time, the departures from the average being greatest at the end of April and the beginning of May. Such early spring migrants as the swallow, cuckoo, and nightingale made their appearance at about their usual dates. The only deficient farm crops were wheat, barley, and peas. On the other hand, oats, beans, potatoes, turnips, mangolds, and hay were above the average, and more especially beans, turnips, and hay. The crop of apples, pears, and plums was much under average, while all the small fruits (except strawberries, which yielded well) were also rather under average.

HISTORICAL.—May 18.—Archdeacon Cunningham, President, in the chair.—The Liverpool City Library was admitted as a Subscribing Library.—Prof. Firth read a paper on 'The Ballad History of the Reign of James I.' Many of these ballads are in the Pepysian Collection, Magdalene College, Cambridge. It would seem that John Selden made a collection of ballads and that Pepys acquired the collection. Among the more curious is one triumphing over the fall of John van Olden Barneveld on the ground of his Arminianism. There are also many which bitterly attack the Scots whom James enriched with English grants and offices.

MEETINGS NEXT WEEK.

- MON. Surveyors' Institution, 5.—Annual Meeting.
— Aristotelian, 8.—'A New Law of Identity,' Miss E. E. Constance Jones.
— Geographical, 8.30.—'The Geographical Conditions affecting the Development of Canada,' Prof. W. L. Grant.
TUES. Royal Institution, 3.—'The Ancient Volcano of Charnwood Forest, Leicestershire,' Dr. W. W. Watts.
WED. British Academy, 5.—'Proposed Changes in Naval Prize Law (The Hague Convention and the Declaration of London),' Prof. T. E. Holland.
THURS. Royal Institution, 3.—'Changes effected by Light,' Mr. T. Thorne Baker.
— Royal Society, 4.30.—'Experiments on the Restoration of Paralyzed Muscles by means of Nerve Anastomosis,' Dr. R. Kennedy; 'The Mechanism of Carbon Assimilation,' Part III., Messrs. F. L. Usher and J. H. Priestley; 'The Action of Radium Radiations upon some of the Main Constituents of normal Blood,' Miss Helen Chambers, M.D., and Dr. S. Russ; and other Papers.
— Linnean, 8.
— Chemical, 8.30.—'The Dissociation Pressures of the Alkali Bicarbonates: Part I. Sodium Bicarbonate,' Messrs. K. M. Caven and H. J. S. Sand; 'The Absorption Spectra of Cinchonine, Quinine, and their Isomers,' Messrs. J. J. Dobbie and A. Lauder; 'The Influence of Conjugated Linkings upon General Absorptive Power: Part II. Some Open-Chain and Cyclic Compounds,' Messrs. C. R. Crymble, A. W. Stewart, and R. Wright, and Miss F. W. Rea; and other Papers.
FRI. Royal Institution, 9.—'Radiotelegraphy,' Commendatore G. Marconi.
SAT. Royal Institution, 3.—'Types of Greek Women,' Lecture I. Dr. W. L. Courtney.

Science Gossip.

PROF. N. STORY-MASKELYNE, who has passed away at the age of 87, was for many years Keeper of Minerals at the British Museum and Professor of Mineralogy at Oxford. At a time when the study of crystallography was rather neglected in this country he employed the advanced methods now in general use, and in 1895 he published a treatise which had been for many years in preparation, but delayed by Parliamentary and other duties. This work dealt only with the morphology of crystals, and he had in contemplation another volume on crystallographic physics. A great lover of precious stones, he described the famous collection of Marlborough gems, and prepared a catalogue, which appeared in 1870. Prof. Story-Maskelyne also contributed much to our knowledge of meteorites.

MESSRS. SMITH & ELDER will publish next Tuesday 'Hygiene for Nurses,' by Dr. Herbert G. Macleod, the author of 'Methods and Calculation in Hygiene and Vital Statistics.' In this book he endeavours to explain simply and concisely the facts in hygiene essential to a nurse in her daily work. Among the subjects discussed by Dr. Macleod are air, ventilation, heating and lighting, water supplies and fittings, drainage, infection and disinfection, and food and milk. Personal hygiene is considered under different headings, e.g., baths, clothing, games, exercises, habits, &c.; and the vagaries of fashion receive the notice they merit from a purely hygienic point of view. Alcohol is discussed; and infant hygiene and mortality are referred to in detail.

MESSRS. E. & F. N. SPON will publish immediately an elaborate 'Bibliographical History of Electricity and Magnetism Chronologically Arranged,' by Mr. Paul F. Motteley. The author, who has been employed on the work for many years, goes back to the earliest times, and provides abundant references to authorities.

MESSRS. KEGAN PAUL are publishing this season a book on 'Weeds of the Farm and Garden,' by Mr. L. H. Pammel, a treatise which is profusely illustrated by photographs and drawings; and 'Farm Crops,' by Mr. C. W. Burkett, a manual on the growing of American field crops.

THE ENTOMOLOGICAL SOCIETY gave a *Conversazione* on Wednesday evening, the 17th inst., in the rooms of the Linnean Society at Burlington House. These gatherings are perhaps rather social than scientific, but there was much to interest both the entomological and the non-entomological portions of the assembly. Mr. Baldock's "Stick Insects" in every stage of development, and the other live exhibits—Messrs. Crawley and Donisthorpe's observation nests of ants and their guests, Mr. Bacot's fleas in all stages, and Mr. Newman's larvæ and pupæ—were always surrounded, except while the two very interesting lectures, by Prof. Poulton on 'Recent Discoveries in Insect Mimicry,' and by Mr. Enock on 'The Tiger Beetle' (*Cicindela campestris*), were in progress. Both lectures were illustrated by the lantern, and the former also by Prof. Poulton's exhibit of mimetic Lepidoptera from Africa and South America.

THE death occurred at the end of last week of Mrs. Williamina P. Fleming, who, born at Dundee in 1837, went in early life to America, and was for many years connected with the Harvard College Observatory. Her work there was chiefly on the photographs taken with the Henry Draper Memorial telescopes, and in the course of her examination of the plates she discovered several *novæ*, and a large number of variable stars, besides many having peculiar spectra. Her reputation led to her being elected an Honorary Member of the Royal Astronomical Society of London.

THE REV. T. E. R. PHILLIPS of Ashted, Surrey, has recently noticed a remarkably rapid diminution in the longitude of the hollow surrounding the Red Spot (as it is still called, though it has for some time lost its distinctive colour, and is more of a grey hue) on Jupiter.

THE publication of the 'Astronomischer Jahresbericht,' which was started by the late Prof. Wislicenus in 1900, has been taken over by the Rechen-Institut of Berlin. The volume for 1910 will shortly appear.

FINE ARTS

BLACK-AND-WHITE ILLUSTRATIONS.

Glasgow. Fifty Drawings by Muirhead Bone. (Glasgow, MacLehose & Sons.)

The New Inferno. By Stephen Phillips. With Designs by Vernon Hill. (John Lane.)

Two Drawings by Hok'sai. (Essex House Press.)

THE art of black-and-white illustration is to-day in a state of transition in this country. The over-cheapening processes of photography are but performing an act of mercy in putting a term to the lingering but discredited school of realistic painters in black and white, which has for so long offered

to the general public the literal and pitilessly circumstantial statement of facts which that public desires. We get every morning many pages of haphazard reproduction of the actual things to be seen in different parts of the world, and, until familiarity assures us of the redundancy of this information—of the endless repetition underlying its apparent variety, we have little use for the illustrator in his old character as furnisher of the popular imagination. When he comes back, it will be as an eliminator of the unessential; nor is it too much to hope that after a decade of ubiquitous sight-seeing through the medium of the camera, it may dawn upon us that it is not what we see, but how we look at it, which makes our existence interesting or dull. When this is realized, the days of the large drawing reproduced by photography on a tiny scale (so as to give a maximum of detail to the square inch, but to blur the actual touch and execution of the artist) may well be over. To see the world through another mind than our own—to share the artist's discovery of analogies between Nature's material and the technical processes at his disposal—may well be a change after such a copious debauch of the impartial passivity of the camera, and of the black-and-white painters who rivalled it in colourless and irrelevant accuracy.

Of the three publications now under review, the first, a portfolio of reproductions, is typical of this state of transition. For all his wealth of detail, Mr. Bone belongs to the future in that he is a designer; yet when shown on this tiny scale his wonderful elaboration of detail becomes more insistent; the vivacity of his attack is tempered for us by the false delicacy of photographic reproduction. Even in the best of his drawings, such as No. 50, 'Blochairn Church,' the unifying act of his design would be more impressive without the assistance of the mechanical unification that comes from its being reduced to a scale at which the variety of touch which might betray the history of the drawing tends to vanish. His range is thus not so striking as the quantity of material he handles, and in an artist of Mr. Bone's calibre this is regrettable.

The Glasgow drawings show the bad, departing method of presenting illustrations to the public, but they are supremely good instances of the mode. The illustrations to 'The New Inferno' offer unsatisfactory examples of what is nevertheless the illustration of the future. This will, we venture to predict, be of a more imaginative order, and will confess more frankly the manner of its execution. Mr. Vernon Hill's execution is at least clear and decided, hiding behind no covering film of mystery; but his design lacks compactness and power. His subject-matter is monotonous, yet even so dissolves before the gaze into component parts which the artist seems unable to weld together. His inspiration is of the same mixed order, including recollections of Blake, but in combination with a dull and academic taste in figure-drawing. 'The Self-Glorified' (p. 104) recalls the work of Mr. Sidney Sino, but with less force, less style, and more pretension.

The vigour and vitality of the reproductions of Hokusai's drawings from Mr. Rothenstein's collection remind us that in the work of liberating illustration from the bonds of literalism the East is our master. They are presented on a scale which shows to perfection the masculine vigour of the artist. No. 2 in particular exhibits a profound instinct for the mysteries of

anatomy, conceived not as a mechanism, but as a vital growth, such as is rare in any art of East or West. Mr. Rothenstein introduces the prints with a short homily on the function of the artist—"to suggest the permanent relation between the mood or subject he conceives, and the world of experience which lies beyond that which he actually sets down."

ARCHÆOLOGICAL NOTES.

M. LÉON HEUZEY, in presenting to the Académie des Inscriptions on the 20th of January last some recent works by M. Thureau-Dangin on the early Babylonian tablets accumulated, as he says, in vast numbers in the Imperial Ottoman Museum at Constantinople, made some remarks about the civilization of Western Asia which are worth noting. According to him, at the epoch of the First Babylonian Dynasty—which we may put with Mr. King as beginning in 2232 B.C.—the language, the script, and the art of Babylon reigned throughout the whole of Western Asia from Chaldæa to Cappadocia. He particularly drew attention to the fact that the greater part of the names of the gods spread throughout this region were of Babylonian origin, and were to be referred not to Semitic, but to Sumerian originals. Such a pronouncement is a useful counterblast to the Pansemitism of modern German Orientalists, and it is much to be hoped that either M. Heuzey or his able coadjutor at the Louvre, M. Thureau-Dangin, will develop it further. Several new volumes of texts from the Constantinople Museum by the latter scholar are promised very shortly, and should give us the evidence on which M. Heuzey relies.

In the current number of the *Zeitschrift für ägyptische Sprache* M. Édouard Naville has an article on the pillow and head amulets of the ancient Egyptians, which has a good deal of significance for the study of Egyptian origins. M. Naville points out that many of the objects buried with the dead of the Old and Middle Kingdoms were not amulets in the proper sense of the word, having no protective effect, but being merely intended for the use of the dead in the next world. Such were the tools, the weapons, and the vases generally, which fulfilled the same office as the paper money which the Chinese still devote to the use of the dead. But the model of the wooden pillow of crescent form placed under the neck was a different affair, and was from the earliest times a phylactery intended to protect the dead against the cutting in pieces which the early Egyptians seem to have so much dreaded. M. Naville quotes from 'The Book of the Dead' a chapter "not permitting," according to the rubric, "the head of the dead to be cut off in the next world," and he declares that this was originally intended to be engraved on the pillow amulet. But there was another chapter dealing with a "mysterious" or "hidden" head, which was to be recited by the Kher-heb priest on the day of the interment, and which, he thinks, referred to a much rarer amulet in the shape of a human head, of which Mr. Theodore Davis has found an example in the Valley of the Kings. M. Naville considers this to be a survival of the stone heads sometimes found in the tombs of the Old Kingdom, of which he has made a special study. He does not notice, however, that the use of such a pillow presupposes a mode of hair-dressing in which the hair must have been frizzed out after the manner of the Hadendowa tribes in the Sudan, and

that of this the wig of the Middle Kingdom may have been a survival. The African origin of the Egyptians of the earliest dynasties therefore receives one proof the more.

In the *Bulletin de Correspondance Hellénique* M. Paul Perdrizet calls attention, in the course of an article on the study of the Macedonian language, to a bilingual stela found at Memphis, in which a Ptolemy (probably Philopator) wearing the double crown is striking a fallen enemy. Although the scene is a reproduction of that found on the tablets of the First Dynasty, the king, instead of being on foot and armed with mace and shield—which seems to have been the warlike equipment of the protodynastic Egyptians—is here mounted on horseback and uses a lance of enormous length, which M. Perdrizet would identify with the Macedonian *sarissa*. One does not know how this may be, because Ra and Horus are both represented on monuments of the New Kingdom as spearing the fiend Apep with an aim of nearly the same length; but M. Perdrizet is justified when he declares that an ostrakon with the same figure lately published by M. Daressy, and claimed by him as of the period of the Ramessides, is really a Christian production coming from some Coptic *deir*, and made with the purpose of searing away the Devil. That the group represents the same scene, however, there can be no doubt, as also that it passed into later Christian art, as M. Clermont-Ganneau showed some time ago, as St. George and the Dragon. A small monument in the Louvre in which Horus is represented as a soldier in Roman cavalry dress makes this clear; and thus the process by which a group, originally made to record an historical event under one of the kings of the First Egyptian Dynasty, gradually became a Christian talisman, and was transferred by a kind of accident to our English coinage at the present day, is well established.

Not less curious, perhaps, is the case of the gold crescents frequently found in prehistoric tombs in the South of Europe and elsewhere, to which M. Camille Jullian devotes a paper in the current number of the *Journal des Savants*. He says that one of the latest forms of these ornaments—which from their shape have been called *lunule*, and said to be connected with moon-worship—was that which appears upon the buskins of Roman patricians in Imperial times; but he traces their origin back to the pendants in crescent, or rather semicircular, shape, made of schist or slate, and found in such numbers in Egyptian tombs of the so-called "prehistoric" period. That these were really pendants meant to be worn on the breast ægis-fashion for magical protection, and were not axe-blades intended for insertion in a grooved shaft or handle, is proved by some specimens lately discovered at Mahasna, and not yet published. Gold, as M. Jullian says, was known before copper, and always considered magical, no doubt from its incorruptibility.

M. Cavvadias's notes on his recent excavations on the island of Cephalonia, mentioned in these Notes for January last, have now been published in full in the current number of the *Comptes Rendus* of the Académie des Inscriptions. The excavations were made at the expense of the Dutch scholar Mr. Goekoop, and reveal, according to their director, three different stages of culture: one neolithic, which he dates at least 3000 B.C.; one pre-Mycenæan, which he supposes to have begun about a thousand years later; and a third which he calls Mycenæan, and would place between 1500 and 1000 B.C. The burials all show

that the dead at the earliest epoch were placed in the earth in a crouching position, and were never burnt; but he also found several circular or "beehive" tombs of the Mycenæan type, and a cemetery giving evidence of an intermediate stage, where the dead were buried either in the wooden huts in which they lived or in the narrow spaces between their dwellings. Gold ornaments were found in some abundance, and also weapons of bronze, but no iron, which leads M. Cavvadias to reiterate that neither the burning of the dead nor the use of iron was known until the end of the Mycenæan period and the coming in of the Dorians. Although he shrinks from positively claiming Cephalonia as the Ithaca of the 'Odyssey,' he points out that it must have been "the most important and most interesting" territory in the kingdom of Ulysses.

In the current number of the *Bulletin de Correspondance Hellénique* Herr F. Dürrbach gives a long account (not yet finished) of the excavations lately conducted by him at Delos, at the expense of the Duc de Loubat. The inscriptions which he publishes are entirely financial, and relate to the system of farming which M. Homolle has studied with great care, while they seem for the most part to date to the fourth century B.C.

More generally interesting are the excavations of Mr. Hatzidakis, the Ephor of Cretan Antiquities, at Tylisos, about 6 miles west of Candia and Cnossus, where he has discovered the relics of a palace, ruined by fire and pillage, as was the case with most towns of the Minoan age, but containing the remains of monuments which he declares to be superior in wealth and artistic skill to those found at other sites in Crete. Among these were copper cauldrons many times larger than any yet found at this date; a small statue about 12 inches high, said to rival the best classical examples of art; fragments of wall-painting of a style superior to those of Cnossus; and two tablets in the Cretan alphabetical script. There was also a rhyton in obsidian; and the Ephor found a cemetery of the mid-Minoan period not far from the palace, in which he hopes to come across other treasures. We take our account from an article in *The Hellenic Herald* which appears to be "communicated."

At the meeting of the American School at Athens held in March, Mr. Hill, the Director, gave an account of the excavations recently carried out by the School near the Peirene, where, in a cistern of the Byzantine period, they came across several marble heads, including one of the bearded Dionysus of heroic size. They also finished the tracing of the Court of Apollo, which turns out to be quadrangular with pillared porticoes, dating apparently from the first century A.D. Three reservoirs were also discovered, in which the overflow of the great spring was stored up. One of them is described as being a vaulted chamber built of huge stones, which is said to have been the method employed until the close of the Hellenistic period.

At the same meeting Mr. W. Dinsmoor gave an account of the treasure-houses of Delphi, of which he thought nine were erected in the hundred years preceding 550 B.C.: of which eight were in the Doric style, and of limestone; and the ninth in the Ionic, and of marble. Later, a great number were built by different peoples, such as that of the Sicyonians mentioned by Pausanias—one of the latest being that called Marmaria, which Mr. Dinsmoor thought belonged to the inhabitants of Marseilles.

Some excavations by Mr. Arvanitopoulos, Ephor of Antiquities in Thessaly, were also announced. He is said to have discovered at Laspochorion some geometrical tombs, with the Acropolis of Omolios and a temple with many inscriptions.

In the *Jahreshefte* of the Oesterreiche Archäologische Institute in Vienna, Herr Heinrich Sitte has an excellently illustrated paper on a marble Hecateum, or altar to Hecate, from Attica, now in the Schloss Ottenstein, and the property of Count Lamberg. It shows three beautifully sculptured figures of the goddess in high relief, grouped back to back round a central column, and each standing between two torches, and bearing on the head something like a *modius* or basket. The figures are rather over 12 inches high, while round them dance three maidens with interlocked hands, their heads reaching hardly higher than the goddess's waist. The goddess and the worshippers are alike clad in garments reaching to the feet; but although the goddess wears a narrow girdle, the dancers are ungirt. It should be noticed also that the backs of the latter are turned towards the goddess and that they face outwards, which is the position always assigned to the votaries in the Sabbath of the Middle Ages. There are only this and the torches to connect the monument with the patroness of magicians, and the expression of the face is so calm and benevolent as to lead Herr Sitte to liken it to some of the early representations of the Graces. He seems to attribute the monument to the beginning of the fourth century B.C.

SALE.

ONE of the most notable picture sales of recent years was held at Messrs. Christie's on Friday, the 19th inst. The chief honours fell to Raeburn, a portrait by him realizing over 23,000*l.*, the highest price ever paid for a picture in an English auction-room. A landscape by Cuyp exceeded 5,000*l.*; and portraits by Gainsborough, Hoppner, and Romney fetched more than 4,000*l.* each.

The sale opened with pictures belonging to Mr. George Wilder: P. Moreelse, Portraits of a Gentleman and his Wife (a pair), the gentleman, in black dress, with large white ruff and lace cuffs, holding his gloves in his left hand; the lady, in black dress, with white lace collar, cuffs and cap, holding a fan in her right hand, 1,627*l.* A. Cuyp, Herdsmen and Cattle (Smith's 'Catalogue Raisonné,' vol. v. p. 319, No. 125), 5,040*l.* J. van der Heyden, A View of the Valkenhof at Nimeguen, 504*l.* A. van der Neer, A Landscape, in the foreground a peasant with a dog, and a herdsman under a tree; beyond, by a river, other peasants and cattle; a town in the distance, 892*l.*; A River Scene: Moonlight, two peasants in a punt in the foreground, sailing boats beyond, 504*l.*

The property of the late Sir William Agnew: Paul Potter, A Group of Three Oxen and a Sheep in a Meadow, 1,522*l.* Reynolds, A Girl with a Goldfinch, 378*l.*

The following were from various collections. Drawings: D. Gardner, Mrs. Robinson (Perdita), in long pink cloak open at the neck; standing, leaning her right hand upon a stone balustrade; a dog before her, 1,155*l.* J. Downman, Portrait of a Naval Officer, in blue coat with gold braid, white vest and stock, powdered hair; ships at sea in the distance, 115*l.*; Portrait of a Young Naval Officer, in blue coat, white vest, and black stock, powdered hair; sea in the distance, 168*l.*; Portrait of a Naval Officer, in blue coat with white facings and gold braid, white vest and black stock, powdered hair; the sea in the distance, 115*l.* Pastels: J. Russell, Admiral William Bligh, in blue naval uniform with white facings, powdered hair; and Mrs. Bligh (née Elizabeth Beetham), in white muslin dress, holding a bunch of currants; a pet dog on the couch beside her (a pair), 430*l.* Pictures: W. Owen, Mr. Barber, in brown coat, seated, with his two daughters, in white dresses, standing before him, 724*l.* J. Highmore, Portrait of a Lady, in blue dress with pink scarf and white sleeves, 241*l.* Rev. W. Peters, Portrait of a Lady,

in white dress with pink sash, and pink ribbon in her hair; holding a book, 861*l*. Lawrence, Mrs. Locke (*née* Jennings Noel), in pink dress with blue sash, a white muslin scarf over her arms, coral necklace, 2,362*l*.; Thomas Taylor, in black dress with white stock, seated on a couch, resting his right arm upon a table, a volume of Plato by his side, 483*l*.; Mrs. Thomas Master (*née* Mary Dutton), in white dress with blue sash, black shawl over left arm, white mob cap with blue ribbon and bow, 1,312*l*. H. Singleton, The West End of the Town; and The East End of the Town (a pair), 598*l*. Van Dyck, Queen Henrietta Maria, in black dress with lace collar and cuffs, and strings of pearls, holding a rose in her hand, 325*l*.; John Oxenstierna, Count of Södremöre, in rich gold tunic with slashed sleeves, black breeches, and black cloak over his left shoulder; standing, 3,675*l*. J. Zoffany, Mrs. Garrick, in yellow coat over a blue bodice, white satin skirt, holding a mask in her hand, 294*l*. The Master of the Magdalen Legend, A Triptych, with the Resurrection in the centre, the Supper at Emmaus and the Incredulity of St. Thomas on the wings, 210*l*. Giorgione, The Resurrection, in the foreground the open tomb, with two soldiers alarmed at the sight of Christ hovering above them in mid-air, 525*l*. J. van Ruysdael, A Woody Landscape, a gentleman and a lady walking along a road in the foreground; a cottage and peasants on rising ground to the left, 220*l*. J. Berkheyden, The Interior of a Church with Figures, 304*l*. Gainsborough, The Rev. Wadham Pigott, in black dress and gown with white bands, head turned slightly to the left, hair powdered, 1,680*l*.; — Provis, Esq., in plum-coloured coat and yellow vest with embroidered edge; white stock and powdered hair, 924*l*.; Mrs. Provis (*née* Anne Pigott), in yellow dress, trimmed with gold and yellow beads; a grey scarf with gold fringe hanging over her left shoulder; dark hair done high, and ornamented with a string of beads, 4,935*l*. Hoppner, Sophia Bridget Barwell ("La Belle Amazone"), in white dress and white cloak edged with fur; a blue bow at her neck, and her hands in a muff; large black hat with white feather, 4,725*l*.; Mrs. Ross (*née* Gunning), in white dress, with green cloak edged with fur, 325*l*.; Portrait of a Lady, in black dress with fur cloak, scarlet ribbon in her hair, 2,625*l*. Rubens, Peace embracing Plenty, two female figures, under a monumental arch, with a cornucopia of fruit, 2,047*l*. Romney, Lady Glasgow, in white dress, with deep frills in front, long sleeves and white sash; a white veil over her semi-powdered hair, 4,200*l*. Raeburn, Mrs. Robertson Williamson, in white dress, cut low at the neck, and fastened with a white satin bow at the waist; pale pink satin coat, with long sleeves and tassels; standing before a tree, resting her left arm upon a branch, 23,415*l*. Mrs. Andrew Wood, in dark-green dress with white muslin fichu, and white muslin cap with yellow bow, 3,360*l*. Morland, The Public-House Door, 1,785*l*.

The following pictures were the property of Mr. Norman Forbes Robertson: Vigée le Brun, Portrait of the Artist and her Daughter, 441*l*. F. Cotes, Mrs. Dalrymple-Horn-Elphinstone, in yellow dress trimmed with lace; blue bows and pearl ornaments, 325*l*.; General Robert Dalrymple-Horn-Elphinstone, in military uniform, 241*l*. Gainsborough, Mrs. Bell, in white dress with blue bow, blue ribbon round her neck, seated on a terrace, 3,045*l*.; Mr. Bell, in dark dress, with white stockings; standing in a landscape, holding his hat under his right arm, and taking some snuff from his snuff-box, 1,680*l*.; The Cottage Door, 1,050*l*. Hoppner, Mrs. Denison, in black dress, cut low at the neck and with short sleeves; narrow blue sash tied in a bow, which she holds with her left hand, 3,045*l*. N. Maes, Portrait of a girl, in green dress with grey cloak, 262*l*. J. Ochtervelt, A Lady, in red jacket, seated at a table instructing her maid, who stands by her side; a spaniel in the foreground, 630*l*. J. van Ravesteyn, Portrait of a Lady, in black dress with white ruff, and head-dress, 273*l*. Romney, The Infant Shakespeare, attended by Nature and the Passions, 420*l*. D. Teniers, A Smoker, in blue coat, seated; three boors behind, 220*l*.

The total of the day's sale amounted to 92,421*l*. 18*s*. 6*d*.

Fine Art Gossip.

THERE were several candidates last week at the Académie des Beaux-Arts for the place rendered vacant by the death of Roty. At the second ballot M. Laguiller-

mie was declared elected by an overwhelming majority. The new Academician is 70 years of age, and won the Grand Prix de Rome as far back as 1866. His engravings of works by Hals, Velasquez, Van Dyck, and Gainsborough are well known to collectors.

M. CONSTANT MAYER, whose death is announced from Paris, had been a regular exhibitor at the Salon since 1869, when he sent 'La Rencontre: épisode de la Guerre d'Amérique en 1863,' and also 'Femme Iroquoise de l'Amérique du nord.' His picture in this year's Salon is 'Chant de la Forêt.' He was a native of Besançon.

THERE is much that calls for congratulation in the Eighty-Third Annual Report, just issued, of the Royal Scottish Academy. At the annual exhibition 476 works were shown. The Academy's Life School has been transferred to Lauriston, thus carrying out one of the ideals announced at the founding of the Edinburgh College of Art, "viz., the co-ordination in one central institution of the higher art training previously given by various bodies throughout the city." Care has been taken that, in changing its position, the school shall remain, as hitherto, the Academy's school, and shall carry with it the characteristics and traditions of its half-century of existence. Its new designation is "The Royal Scottish Academy's School of Painting," and the agreement provides that the teaching shall be given by "Visitors appointed by the Academy."

IN order to increase the representative character of the Academy's annual exhibitions, Sir James Guthrie has made an appeal for a new endowment fund, and for this purpose 10,000*l*. has been raised. The Academy's collection has been augmented by the following additions: portraits of John Hutchison by Orchardson, and of Capt. Clark by George Watson; 'Life Study,' by Tom Graham; and 'Like a Dog, He Hunts in Dreams,' by J. W. Ebsworth.

THE Director of the Malaspina Gallery at Pavia is organizing a series of exhibitions of the wonderful collection of engravings preserved there. The collection is virtually world-renowned, but has for years been almost inaccessible to the public. The Director now intends to exhibit the work of one master at a time for the space of two months. Thus in April and May Dürer's engravings have been on view. Dürer is to be succeeded by Rembrandt during June and July; and this master by Marcantonio Raimondi—an admirable plan which is likely to attract many students to Pavia.

IN an interesting little volume lately issued at Milan, Senator Luca Beltrami returns to a theme often treated by him before, Bernardino Luini's frescoes for the villa known as "La Pelucca." He shows that the villa was owned in the first half of the sixteenth century by the Rabia family, for whom Luini executed many works not only in their country house, but also in the houses owned by them near S. Sepolero at Milan, where the Confraternity of S. Corona was established, and where Luini executed his celebrated fresco of the 'Crowning with Thorns.' Signor Beltrami is able to show, almost conclusively, that the cycle of frescoes in the villa was completed between 1522 and 1524. The eight fragments at Berlin, usually believed to have belonged to the series, were, he considers, painted for the Casa Rabia at Milan. It is curious that the name of Luini's patrons, the Rabia,

should have been entirely forgotten in connexion with these frescoes, which are always associated with the Pelucca family who subsequently owned the villa.

ON June 13th Dr. Edwin Freshfield, President of the Byzantine Research and Publication Fund, will deliver a lecture on 'Byzantine Buildings at Hierapolis and Elsewhere in Asia Minor,' in the rooms of the Society of Antiquaries at Burlington House.

EXHIBITIONS.

MUSIC

THE WEEK.

THE LONDON MUSICAL FESTIVAL.

THIS is the first London Festival at Queen's Hall since the one held in 1899. It opened on Monday evening, and ends to-day.

The programme of the first concert included Sir Edward Elgar's 'Dream of Gerontius,' of which on the whole a praiseworthy performance was given. Mr. Gervase Elwes's reading of the Gerontius music is familiar: it is highly emotional, and the sentiment is never exaggerated. Madame Julia Culp is a fine artist, and her renderings of the Angel's 'Hallelujah' song and the 'Farewell' were excellent as regards tone and technique, but they lacked dignity tempered by tenderness. She did not appear to be strongly feeling the meaning of what she was uttering; perhaps, indeed, she was hampered by the English words. Mr. Herbert Brown as the Angel of the Agony was correct, though somewhat cold. The singing of the Sheffield Choir was at times very beautiful, especially in soft passages; but there was one unfortunate slip. The work was not new to them, but they had gone through a long and fatiguing rehearsal in the afternoon, and the attention of some of the singers may for a moment have flagged. Sir Henry Wood is, however, an experienced conductor, and with the help of his Queen's Hall orchestra a threatened breakdown was cleverly avoided.

Max Reger is a prolific composer who has published about 120 works, but of these only a small number are known in

London. His setting of the 100th Psalm for chorus and orchestra was the novelty of the evening. Reger has always been noted for his contrapuntal skill, and of this the double fugue in the final section gave evidence. Here and there occur impressive moments. On the whole, however, it is head music; moreover the opening joyful mood of the Psalm is expressed chiefly by power of sound. Again, in the coda of the work Luther's Hymn is introduced in a blatant, mechanical manner which by no means intensifies the closing words of the Psalm.

The programme of the second concert on Tuesday afternoon, though long, may be briefly described. There were three Concertos: Herr Casals played the Haydn-Gevaert one in D, and Herr Kreisler the Elgar Concerto, the two afterwards taking part in Brahms's Double Concerto for violin and 'cello; and all three performances were magnificent. At the head of the programme stood a novelty, namely, an 'English Rhapsody' by Mr. Percy Pitt, based on popular English melodies of the seventeenth and eighteenth centuries. With its attractive melodies and clever and effective scoring the work created a pleasant impression. It was conducted by the composer. At the end came another novelty, 'Images,' No. 3 of Debussy's 'Rondes de Printemps.' Rhythm and colour, as usual, play important parts in this interesting piece of programme music, and it is less vague than some of Debussy's recent works. It wants, however, more than one hearing, and a better place than was assigned to it in the programme.

On Wednesday evening was produced, under the direction of the composer, Sir Edward Elgar's Second Symphony in E flat. His first achieved success; and as regards the first, second, and last movements of the present work, we believe that success has been more than maintained. There is wonderful life and energy, combined with great dignity, in the opening movement; and the workmanship and scoring are deeply interesting. The joy of the Shelley motto at the head of the score, "Rarely, rarely comest thou, spirit of delight," seems particularly to apply to this Allegro. Ecstatic joy is expressed in the principal theme, while in the secondary one that mood is of a quieter kind. The Funeral March suggested by the second movement may be explained by the dedication of the work to King Edward VII. After the introductory bars there enters a theme of rare simplicity, yet most impressive, and it is enhanced by the sable-coloured accompaniment. Later there is a second one of imposing character, and richly scored. The quaint, plaintive coda is very striking.

A change comes over the spirit of the music in the next movement, entitled a Rondo, and marked presto. With its syncopated rhythm and rapid tempo, the opening section has a disturbing effect.

The composer must have worked to some picture in his mind, but no clue is given. There is much skilful writing in it, but inspiration is less strong than in what preceded. In the Finale the composer again gives us some of his best music. One great feature of this Symphony is the general clearness of the form, although there are many noteworthy details which cannot be grasped at a first hearing; moreover there are no sensational, extravagant effects. The performance by the Queen's Hall Orchestra was admirable.

There were two other novelties in the programme. One was a short Suite, 'Parthenia,' by Dr. Walford Davies, based, as the title shows, on an old melody. The music, now quiet and peaceful, now cheerful, is full of quaint charm and effective scoring. The other was a Poem for orchestra, 'Dante and Beatrice,' by Mr. Granville Bantock. Such a poetical basis was more calculated to inspire the composer to write emotional music than the cold philosophy of 'Omar Khayyam.' It is a fine composition, and Mr. Bantock has here shown himself a master in the art of orchestration. Both these novelties, under the conductorship of their respective composers, were extremely well rendered.

Musical Gossip.

At the Santley matinée at Covent Garden on Tuesday there were many attractions, but it was only in the last number of a very long programme that Sir Charles Santley, the hero of the afternoon, appeared. This, as announced, was as Tom Tug in Dibdin's 'The Waterman,' a piece which, produced in 1774, kept the stage for many years. It was an appropriate selection, for Sir Charles was associated with it when it was revived over fifty years ago. The number of distinguished artists, both theatrical and musical, who gave their services, and the name of Sir Herbert Tree, the organizer of the matinée, afforded strong proof of the high esteem in which the veteran singer is held.

THE first performance in England of Giacomo Puccini's 'La Fanciulla del West' will be given at Covent Garden next Monday evening, under the direction of Signor Campanini. Minnie, Jack Rance, and Dick Johnson, the three principal *dramatis personæ*, will be taken by Mlle. Destinn, M. Gilly, and Signor Bassi. The first and third are well known. M. Gilly, who was an excellent Amonasro in the recent performances of 'Aida,' is a new-comer. Mlle. Destinn was the Minnie when the work was produced at the Metropolitan Opera-House, New York, on the 10th of December, 1910.

GUSTAV MAHLER, the great conductor, after a long illness, died at Vienna on the night of the 18th inst. He was born at Kalischt, Bohemia, in 1860, and studied composition at the Vienna Conservatorium under Anton Bruckner. As conductor his merit was soon recognized, so that at an early age he was appointed by the impresario Pollini Capellmeister at Hamburg, where he remained for six years. In 1897 he was

made Court Opera Director at Vienna, and soon after conductor of the Philharmonic, as successor to Dr. Hans Richter. He remained in Vienna for ten years, and then went to New York, first as opera conductor at the Metropolitan House, and finally of the Philharmonic Orchestra there. A few months ago he was seized with the illness which has proved fatal.

MAHLER was an industrious and ambitious composer. He wrote no fewer than eight Symphonies, the last of which was produced at Munich, under his direction, on September 12th, 1910. He held very decided views as to the limits of his art, and as to the necessity at times of "word" as well as tone. In his last symphony, planned on a gigantic scale, he fully developed what in earlier works had only been partially expressed.

MISS ETHEL MARSH, the violinist, at her forthcoming recital with Mr. Frederick Grisewood, will include an unpublished Quartet by Paganini for violin, viola, guitar, and 'cello, which has never been heard in London, and is among some manuscripts in the possession of Mr. Alfred Burnett.

PERFORMANCES NEXT WEEK.

- SUN. Kubelik's Special Concert, 3.30, Royal Albert Hall.
 — National Sunday League Concerts, 3.30, Queen's Hall; 7, Palladium.
 MON.-SAT. Royal Opera, Covent Garden.

DRAMA

Shakespeare Bibliography: a Dictionary of Every Known Issue of the Writings of our National Poet and of Recorded Opinion thereon in the English Language. By William Jaggard. (Stratford-on-Avon, Shakespeare Press.)

THIS monumental volume is the most important contribution to Shakespeare bibliography which has yet appeared, and the bibliographer apparently intends it to retain that position for some time to come by publishing an annual appendix of omissions and additions.

The man and the book are both worthy of special notice. Mr. William Jaggard of to-day is a descendant of the William Jaggard, printer, contemporary of the poet, who helped Heminge, Condell, and their fellows to produce the First Folio in 1623, on the last page of which appears the record: "Printed at the charges of W. Jaggard, Ed. Blount, I. Smithweeke, and W. Aspley, 1623." The book was destined to become the monument of the printer as well as of the poet, as William Jaggard died during the year of its printing, and hence the name of his successor Isaac Jaggard stands on the title-page with that of Ed. Blount, under the Droeshout portrait.

It is a remarkable fact that it has been left for one of their descendants, nearly three hundred years after their date, to collate all the issues, and collect all the titles of the books and papers written upon and around the works of the great poet. Mr. William Jaggard is still a comparatively young man, though he has been absorbed in this work for 22 years. He must have been early inspired to take up his great scheme, and he has carried it through steadily and faithfully, after a plan of his own which, when understood, gives great facilities to research students, and simplifies their labours immensely:—

"It is a convergent and cumulative catalogue, annotated and indexed, of the world's twelve largest Shakespeare libraries, so simply arranged that a child can use it. It contains over thirty-six thousand distinct entries and references, including many hitherto unrecorded editions, with thousands of notes and extracts. It gives minute details and available locations of every known issue of Shakespeare's writings (whether written, printed, separate, collective, authentic, attributed, private, public, in or out of print); likewise of every tract, pamphlet, volume, or collection of Shakespearean comment; of each analogue or source, with notes of the passage affected; of every important contemporary, or subsequent allusion to, or article on, the dramatist or his productions; of each autograph, genuine or forged; of all engraved Shakespeare portraits; with market values of the rarer entries."

In such an enterprise praise, not blame, is due to one who absorbs all the work of his predecessors in the field. Mr. Jaggard begins with the lists of Shakespeare's works by Francis Meres (1598), Francis Kirkman (1671), Gerard Langbaine (1698), Francis Peck, John Mottley, W. R. Chetwood, Edward Capell, Malone, and others. In 1818 John Britton added a bibliography of detached essays and dissertations on Shakespeare which widened the field of research enormously. But Mr. Jaggard has gone through them all down to Lowndes, Collier, Halliwell-Phillipps, and Allibone. Albert Cohn in 1871 began his 'Shakespeare Bibliographie,' which appeared annually for some years, and his work is made use of.

To the results gleaned by all these workers Mr. Jaggard has added those

gathered from the catalogues of private libraries, the indexes of magazines, and the columns of newspapers. It is difficult to explain the scope of his volume in more condensed words than the author himself uses:—

"Key-references are embodied to all incidental Shakespeare actors, actresses, artists, attributes, bibliographers, bibliophiles, biographers, blind-type printing, celebrations, centenaries, clubs, collaborators, commemorations, commentators, composers, controversies, critics, editors, engravers, exhibitions, festivals, forgeries, illustrations, pictorial or literary, jubilees, managers, manuscripts, memorials, monuments, portraits, printers, prompters, pseudonyms, publishers, societies, theatres, translators, vellum printings, &c."

It is evident, therefore, that the book must be forthwith placed in every public library, and in the library of all who wish to study or write about Shakespeare. It might, indeed, be a good thing for the public if editors and publishers were to ask their various authors of 'Thoughts upon Shakespeare' if they had read, before they began to write, even a small selection of the books referred to in this catalogue of books already written on the same subject; for then they might have reason to advise delay in the publication of a new volume till this had been done, and so save the time of the already overburdened Shakespearian.

It is not to be expected that Mr. Jaggard should have completed a work of such magnitude without some imperfections. He has omitted some of the works of the authors mentioned, has ignored the names of a few writers, has under-estimated somewhat the number of copies of rare books in various libraries, and has occasionally misfitted his cross-references. But most of these imperfections may be explained by the fact that the design was so extensive, ranging over many years, that the earlier sheets were worked off before the later names were begun. This gives a rare advantage to the writers whose names stand late in the alphabet, as compared with those entered under earlier letters.

Mr. Jaggard sometimes supplies notes to his entries to explain the subject-matter of any production when it is not made clear by the title. This is a great help, especially to a young student. But occasionally he adds his own views as to their value. This is to be regretted, as we do not expect a bibliographer to do the work of a reviewer. He makes also a few slips, generally unimportant, in the titles and dates of books and authors.

Mr. Jaggard adds to the volume 25 illustrations, some of them interesting, but omits the name of the artist and present owner of the two picture-groups, the originals of the imaginary frontispiece, and the contemporary group round Queen Elizabeth at Lord Herbert's marriage, in 1600. All real students must thank this most industrious and capable biblio-

grapher for what he has done to help them and to commemorate the glories and extend the influence of our greatest English poet and dramatist.

THE WEEK.

DUKE OF YORK'S.—*The Life and Adventures of Margaret Catchpole.*

THERE is a spirit of enterprise, not to say recklessness, about Mr. Laurence Irving's managerial policy which is very engaging. He seems to like taking risks; certainly he never plays for safety. If a piece appeals to him, that is a sufficient recommendation for staging it; he does not let prudential reasons weigh against his own predilections. He is a great believer in the theatre of Brioux, and gave 'Les Hanneçons' in English, and would have given, but for the Censor's ban, 'Les Trois Filles de M. Dupont.' On the other hand, he is no less willing to put into his programme a play of the old "barn-storming" type, leaving his audiences to furnish the comment of mocking and delighted laughter while he and his company give it the advantage of perfectly "straight" acting. At the Duke of York's just now it is possible to see as breezy and ingenuous a melodrama as ever touched the hearts of rustics of two or more generations ago. Whoever has had a hand in adapting to the stage the life and adventures of Margaret Catchpole, whether it be Mr. Walter Frith or Mr. Laurence Irving, or both, has done the work with single-minded thoroughness. His story might have formed the subject of a broad-sheet ballad—as a matter of fact, in the bulk of its details it is historically true; he has set out its incidents in bold, staring colours that fully justify the old-fashioned playbill Mr. Irving has issued, and claim that the entertainment he offers is "exciting, vivacious, and spectacular."

Till a week or two ago, perhaps, the name of Margaret Catchpole, heroine of Suffolk, was unknown to the ordinary reader. Thanks to the newspapers, playgoers need no longer be in ignorance about her astonishing career. How this servant-girl's love for a worthless young smuggler was used by a villain to induce her to make her famous ride from Ipswich to Lambeth; how she was sentenced to death as a horse-thief for borrowing her mount from her master's stables; how she broke jail and climbed the prison wall in sailor's guise; how, after the death of her false lover and the villain who had betrayed him to the pressgang, she made her way to Australia, and there received a free pardon and settled down to happiness as wife of a long-faithful and virtuous suitor—these chapters of her life have been recently rescued from obscurity.

It is the quaintest olla podrida which Mr. Irving and his assistants have fashioned out of such material. Simple types

of virtue and villainy are thrust into an atmosphere that is full of old-style sailors, and their noggins of rum and rollicking dances and talk of old England and cheers for King George. A set of morris dances and folk-songs is presented in the course of the action and during the *entr'actes*. Here and there tableaux are employed, while the great ride to London is realistically pictured by means of the cinematograph. Accepted in the proper mood of not too critical a gaiety, 'Margaret Catchpole' ought to please any one who loves the play, as distinct from plays—in Thackeray's sense; the more so as Miss Mabel Hackney gives the heroine just the broad touch that is needed, and Mr. Laurence Irving makes the most lurid of villains.

**O KING,
LIVE FOR EVER!**

Or, the Last Days of Babylon.

BY

RICHARD WADE JENKINS.

This book deals so unobtrusively with one of the great questions of our time that the reader hardly perceives that he is being led into a new channel of thought. Without exception, the Press Reviews, so far received, are favourable, and even flattering. A few extracts only are here given.

The *Times* describes Mr. Wade Jenkins's book as "a graphic, historical romance, with historical and Biblical criticism in an Appendix."

The *Glasgow Herald* says: "It is the sort of book with which George Ebers has made the Germans familiar. It gives a very vivid notion of the history, topography, and outward aspect of Babylonian life."

The *Scotsman* remarks: "It takes liberties with history, no doubt; but it sets these right in a learned Appendix. It brings in Ezra, Daniel, and Isaiah properly. An able work, which cannot fail to please readers who look for more than mere entertainment."

The *Erith Times* says: "The author is a master of descriptive language, so much so that you almost see a moving procession of the people in their opulence, vice, luxury, and splendour..... The gorgeous displays of ancient Court life are most remarkable, and the author's work in this particular is simply splendid. The scene of the King's revels will never be forgotten by a reader. Every page tells of a master-hand."

The *Nottingham Guardian* says: "The author has well balanced his descriptions of the magnificence of Babylon to the action of the story, so that its gorgeous and barbaric setting is adequately presented without impairing its dramatic interest."

The *Literary Guide* says: "Mr. Wade Jenkins's book contains a wealth of descriptive detail..... A somewhat unusual feature is that most of the dialogue, although in prose form, is written—and very well written—in iambic metre."

The *Daily News* says: "Most readers will find the reading of this story a pleasant way of learning something about Babylon, its size, position, shape, its gods, its luxuries, its creeds and festivals, its streets, wine shops, and dancing girls..... His labour should procure him a large and appreciative audience."

P.S.—Other reviews equally appreciative have since been received.

LITERATURE

The Resurrection and Modern Thought.
By W. J. Sparrow Simpson. (Longmans & Co.)

THE subject of the Resurrection, as it is of cardinal importance in the Christian faith, warrants the exhaustive treatment which it receives in this volume. Having an intimate acquaintance with the relevant literature Dr. Simpson is competent to set forth the problems suggested by the New Testament records, and also the objections which have been taken to statements in these records. Difficulties are not avoided by a mere appeal to authority, and there is no attempt to silence opponents of the tradition accepted in the Church by charges of blasphemy or heresy. Dr. Simpson is always courteous as he is always reverent. He reveals himself on every page, not as a dogmatist with his own interpretations of texts, but as a critic agreeing with or dissenting from writers whose arguments are fairly stated and fairly examined. Any one, of course, is entitled to subject Dr. Simpson's opinions to the most careful tests, and it does not require to be said that there would be different judgments regarding them. His scientific method may be shown from a passage in a chapter on 'The Historical Jesus.' He takes the assertion "that if S. Paul had sat at table with the Jesus of the Galilaean Lake he could not possibly have depicted Him as the heavenly Christ," and proceeds to say:—

"Now that assertion is pure assumption. It is not justified by historical criticism.

The business of criticism cannot be to form a priori decisions on the influences which an individual might have drawn if he had experienced something which did not occur. This is speculation, and not history."

Dr. Simpson's attitude to the questions relating to the Resurrection is definite, and may be learnt from his general approval of the contention of Ménégoz that Christianity stands in a unique relation to history, as it is inseparably bound up with the fortunes of a Person. He goes further than Ménégoz, who says it is a psychological mistake to base Christianity on a principle, and he declares it to be opposed to the essential nature of the Christian religion. Theories are rejected which account for the tradition of the Resurrection apart from the actual facts recorded in the New Testament; and Christian faith is found to be centred in the Christ who was not only the teacher and the Redeemer, but was also the victor over the grave, as He showed in His resurrection, His appearances to the disciples, and His ascension.

Dr. Simpson divides his treatise into four books: 'The Witness of the Twelve,' 'The Witness of S. Paul,' 'The Theology of the Resurrection,' and 'The Resurrection and Modern Thought.' These books are subdivided into chapters, and the first, for instance, contains 'The Empty Grave,' 'The Third Day,' and 'The Locality of the Appearances.' Dealing with the last of these subjects, he inclines to the theory that the condensation of the narrative of St. Mark explains the fact that that Evangelist represents the appearances to the Apostles as occurring exclusively in Galilee. He notes, on the other hand, that St. Luke seems unconscious of any manifestations in Galilee, and admits that, if we possessed the Third Gospel only, we should not know that the Risen Master was seen anywhere except in Judæa, "save only in the conversion of S. Paul." Yet, when St. Luke composed his first narrative, he had before him St. Mark's Gospel with an account of an appearance in Galilee, and he wrote a second time and did not accept St. Mark's detail. He had confidence, in fact, that reliance could be placed upon the Church at Jerusalem, and we are told that he went behind the documents to the living persons whom he met and knew. "We certainly seem led," Dr. Simpson says, "to the conclusion that S. Luke found no authority sufficiently convincing to justify him in recognising appearances in Galilee. But this confirms our confidence in his historical care." It may be a good thing to strengthen St. Luke's reputation as an historian; but if he rejected evidence connected with the Resurrection, how is a modern reader to decide between him and St. Mark? It is true that there are two series of appearances, the Galilaean and the Judæan, and that it is possible to make a choice between them or to accept them both. Yet, when all is said, the fact remains that St. Luke, according to Dr. Simpson, was not convinced in favour of the appear-

ances in Galilee. Prof. Harnack is cited on behalf of the Evangelist, and it is alleged that his 'Sayings of Jesus' goes far to "establish the accuracy with which S. Luke utilised his materials." It is only fair to point out that in his book on 'The Acts of the Apostles' Prof. Harnack finds in St. Luke as an historian "a tendency to carelessness and inaccuracy, often of a very far-reaching influence in his narrative, which may be partly due to his endeavour after brevity."

In the chapter on 'The Resurrection-Body' there is an examination of the teaching of the two opposing schools, the materialistic and the philosophic, and the one, it is said, concentrates on the Gospel phrase "flesh and bones, as ye see Me have," and the other on St. Paul's words "flesh and blood cannot inherit the kingdom of God." Dr. Simpson maintains that there is no real opposition between the Evangelists and the Apostle. The Evangelists are historians "who describe the re-entrance of the glorified Body of Christ into terrestrial conditions, effected for the purpose of convincing His Apostles of His Resurrection, and of giving them instructions and commissions"; while St. Paul, on the other hand, is the theologian who is "not concerned so much with the occasional manifestations as with the essential condition of the Body of Christ in the risen state." It is obvious, then, that Dr. Simpson concludes that the risen Christ adapted Himself to the terrestrial conditions of the men within whose reach He came, and that the adaptation was for temporary purposes. His reception of food, for example, was not to maintain physical life, but was exclusively to prove His identity and the reality of His human nature. If, Dr. Simpson argues, "such condescension to human needs for evidential purposes was permissible, so is the whole assumption of corporeity equally permissible." There is certainly no difficulty in reconciling the Evangelists and St. Paul if the statement is accepted that the Evangelists describe the condescension of the risen Christ to human needs; and it is perfectly legitimate for one who would not limit the Divine revelation to say that the manifestations of the risen Lord suited the recipients' conditions, though they do not "really tell us anything of the spiritual body in its natural state."

The last words of the book may be quoted, as they are worthy in themselves of consideration, and indicate the writer's conception of the faith in Jesus Christ. That faith, he says, is in a Person:—

"But it is faith in Him as what? If it be answered as Incarnate, as Mediator, these answers represent historic fact. Faith in His Person, in the Christian sense, cannot be separated from faith in His Incarnation, and His Death and His Resurrection. For these facts are inseparable from the history of Redemption. They are of such a character that, without them, faith in Christ would be impossible."

The Agonists, a Trilogy of God and Man : Minos, King of Crete ; Ariadne in Naxos ; and The Death of Hippolytus.
By Maurice Hewlett. (Macmillan & Co.)

IT is not on the first reading, or even the tenth, that Mr. Hewlett's trilogy can be appreciated in its depth and scope. That must be reserved, perhaps, for the day when he will give us his promised Epilogue (not, we take it, a satyric drama) in which he is to link the halting philosophies of the ancient world to the ideal of Christianity. Already it is possible to forecast from the riddling utterances of protagonists and chorus something of the main intention of the afterpiece, but in fairness to the author that must be left for the moment in the realm of vague and pleasant surmise. To go further would be an impertinence. For the present we have to examine Mr. Hewlett's dramatic exposition of the fallacies underlying the ancient conception of the relation of God to man. But even the philosophy of these three plays must not be insisted upon at the expense of their consideration as poetry. Here is something unusual—an experiment so daring, at times so bizarre, that it might easily startle the Mastersingers' Guild to instant condemnation. But while the work may give Beckmesser abundant opportunities to score the slate ruthlessly, that only means that there is the greater chance for Hans Sachs to reach forward, to approve and confirm.

The mould is not altogether unfamiliar. It is avowedly Wagner's, and in English Mr. Forman has handled these Sagameasures with some success in his translation of the 'Ring.' But he was hampered by a cramped original, and was not free, as Mr. Hewlett is, to strike boldly for sheer vocal sonority, with aids of rhythm variously conditioned by the sense, and assonance addressed to the ear alone. Mr. Hewlett desires that his work be "read as prose, with the stresses where they would naturally fall, and full value given to the sounds of ordinary speech." This done, he is not without hope that "the three plays ought to be revealed as verse." His hope, we venture to think, is justified, although this view may not be possible to everybody. These plays seem to demand a sense attuned to the greater length of the Wagnerian musical phrase, the inability to grasp which is the reason of much misunderstanding. Wagner, as Mr. Hewlett remarks, wrote his libretti on a strict metrical system: not so his music. The author of 'The Agonists' has seen how truth, for his purpose, lies in the compromise between the two methods. "I have followed faithfully," he says, "the music I have certainly heard, but am incapable of rendering otherwise than by rhythm." If 'The Agonists,' then, be read with a subconscious undertone of orchestral accompaniment in the mind, the words seem to be upborne on a swell of harmony far longer, in its rise and fall, than individual verses, and the whole is welded into a new prosodic unity. What

might seem mere riot of vigorous phrase is thus altered and exalted to pure music—*ex forti dulcedo*. "Music," says Pater,

"and not poetry, as is so often supposed, is the true type or measure of perfected art...and one of the chief functions of æsthetic criticism, dealing with the products of art, new or old, is to estimate the degree in which each of those products approaches to musical law."

That, we submit, is the only temper in which the versification of 'The Agonists' may be rightly approached.

Not less interesting and ingenious is the handling of the content of the Trilogy. Here again there is saving compromise. For while, in a sense, Mr. Hewlett has given us dramas as Greek, in feeling and structure, as the best hitherto attempted in English, he is still the inveterate Romanticist we know. His foreshadowing of a Christian afterpiece conditioned that subtlety. Here the old world and the new are already, in the poet's conception, linking hands, without imperilling the *ἵθος* of either. Statuesque and terrible, Minos and his doomed kindred hold the stage in the Æschylean manner, but withal there are hints, promptings, suggestions of a later spirit, of a new humanity, a sympathy with nature akin to that of 'The Bacchæ,' but wider and fuller, and a conception of passionate love that has in it more of the Renaissance than of the Attic drama. Yet the balance is justly held. Nothing of the Romantic is incongruous with the all-informing Classical inspiration of the Trilogy.

The first play, 'Minos, King of Crete,' has no counterpart in the ancient theatre; the second, 'Ariadne in Naxos,' which is Cinquecento Italian in its detail, has much in common with 'The Bacchæ' the last, 'The Death of Hippolytus,' is in its outline somewhat Euripidean also, but with new accessories binding it closely to the Minoan tragedy. Never before correlated in a dramatic cycle, the three stories reveal the doom of Minos, son of the Bull.

The scene opens in Crete, at the moment of Pasiphaë's death, while the King, still ignorant of his wife's monstrous sin, is absent on one of his nine-yearly communings with his father Zeus on Ida. Dædalus, on a watch-tower overlooking the sea, heralds the coming of dawn and of Minos. To him enters Graulis, nurse of Pasiphaë, to tell him, in veiled and broken speech, that her mistress is dead. The dialogue reveals, by suggestion, the horror of Pasiphaë's crime and its issue—Minotaur, scourge of the Cretans. Graulis pleads, nevertheless, for due funeral rites:—

She loved me, who was lovely, and is dead.

No man could look and think sin,
Nor her rebuke. The perfect are a law
Unto themselves. Refuse her not
The peace she testifies.

DÆDALUS.

Her sin is lead about her neck—
She drowns in it, and drowneth this land
Tainted by her.

GRAULIS.

Judge not thy benefactress, man.
As for me,
All my old breath shall honour her.

Dædalus, won at last by persuasion, barbed with reminders of his share in the Queen's wrong, cries:—

I loved her, she was lovely; let the rites
Be fully done, so that her soul go down
Decently to the windy house of the dead.

A Priest enters, bemoaning the parlous case of Crete, and praying Dædalus for help; but he has other work—"Let Crete save Crete." The Chorus now approaches, singing the Parodos (not the "Parabasis" as it is here called by a slip of the pen):—

First I salute you, Hills,
Guardians of Crete, with brows
Careful and hands uplift:
Thee, Dictæ, beneath whose moon
Dwelleth the Goddess, the lonely one:
Thee Dictæ, from whose bare crag,
Casting her delicate treasure
Seaward, the maid Britomartis
In death found life.

Here is a hint of remoter doom, but they turn to sing of the instant horror of Minotaur, ravaging Crete. The load will lift with the King's return. But before Minos appears, a Huntsman enters, "the embodiment of earthy simplicity and plain dealing," seeking vengeance on the slayer of his sister Britomart. He describes her death in a passage too fine, perhaps, for so simple a man, but tragedy and wrong can uplift even plain-dealers to eloquence, so the author may be forgiven the apparent lapse from character. Minos returns, and asks for the Queen. They answer in riddles. Meanwhile the Huntsman pursues his vendetta, and convicts Minos as the ravisher in intent of Britomart. Strong in his pride of the race of Zeus, the Son of the Bull wagers his son Androgeos to meet the avenger in combat. Dædalus warns him that Androgeos bears no charmed life. His rune has a Pindaric ring. Its opening recalls the twelfth Olympian—

σύμβολον δ' οὐ πῶ τις ἐπιχθονίων
πιστὸν ἀμφὶ πράξιος ἔσ-
-σομένης εὖρεν θεόθεν.

There are other echoes. The dooms are not to be read, prognostics are blind, no man can bear the light of godhead:—

Can a man, being God, bear with men?—

Ο never

Hope that consummation, Minos!
Be man, be God—but not both.
That is denied thee.

A Messenger enters. Androgeos has won in the chariot race at Eleusis. There is a stir of rejoicing. The pride of Minos swells higher: he shouts:—

A new wreath for the brows of the Son of the Bull!

He dooms Dædalus to the Minotaur. But before the guards can do their office, another Messenger comes hot on the heels of the former. The jealous youth of Athens have ambushed and slain Androgeos,

When he, begarlanded and anointed,
Drove home from broad Eleusis
His conquering team.

The tragedy hastens to an end. The King learns of Pasiphaë's death and of her sin. Bowed, he turns to the Hunts

man and offers him battle—"unequal war, for now I have no son." But the challenger will not :—

The price is paid. I ask
No more, nor asked so much.

He goes out with bent head, while Minos, shaking a torch over the sea, lays a curse on Athens, the tribute of youths and virgins yearly devoted to Minotaur. The Chorus in their last word pray that the doom bear not some double sense :—

Alas! man crowned
Remaineth man, his doom
Recoileth oft to spring
Back to the doomsman, and he
That judgeth is convict found.

No man can know himself and the limits hedging his soul :—

Such wisdom standeth not with the force we have :
He only that beareth the brunt of himself is brave.

On this gnomic utterance the play ends, and the way is clear for 'Ariadne in Naxos,' in which the first recoilings of the curse are manifested. The Æschylean gloom of the first piece is now lightened somewhat by passages of great lyric beauty. The spirit of the Evian god is abroad; dithyrambs resound; the figure of a Mænad, familiar in her pose from a famous vase-painting, introduces the note of Dionysan revelry; but through all the curse works, inexorable, Bacchus, instrument of Fate, marks Ariadne for himself, and breathes into Theseus the spirit of martial ardour. The hero, frenzied, takes ship, deserting his bride, over whom Dionysus sheds the might of his terrible eyes :—

His force is a force of rain,
Irresistibly soft,
Fretting the rock, gnawing the plain
With furrow deeper than plough in the croft.

Ariadne, dedicate with the new-sown seed of Theseus, yields to the god :—

Io, Bacchus, lover of Chorus,
Tragic, dark, inscrutable one!
Rapt lead I the dance, my blood
Leaping to thine. O master of me,
Catch the sob in my throat with a kiss, and
seal me to thee!

So much for the δέσις. The λύσις is the agony of Ariadne for her deed. Her remorse, in its essence, brings the play close home to modern thought. The sense of sin, however, has been introduced with such cunning that it scarcely makes the play un-Greek. On the contrary, it remains, perhaps, the most Greek of the three. After all, it is the taint of Pasiphaë working in her daughter. Afar there is a hint of Ægeus's death. Theseus is King in Athens, and awaits his Queen. But Ariadne, going alone into the grove of Artemis, whom she has outraged, slays herself. Dionysus had power over her, but could not win her love. Her heart was dead even as the god possessed her. Thus she died, and the deity failed. His was Power, but no might to win Love. That was the god's tragedy. Minos had knowledge from Zeus, but no power. That was his tragedy.

There remains the tragedy of Love without self-knowledge, as set forth in 'The Death of Hippolytus.' Here Artemis, twice outraged by Minos and his seed, in the wrong done to her in Britomart's death and Ariadne's sin, is the active deity. But her part is not all of vengeance. She points the way to atonement. Let Phædra renounce her lust after Hippolytus, and there is even yet salvation for the stock of Minos. But it is not to be. Deeper still lies another motive of doom. The initial sin of Minos, in not offering the white bull, Poseidon's gift, to Poseidon, exacts a further price. Phædra, stubborn in her passion, appeals to the sea-god, the earth-girdler, to slay Hippolytus. He dies amid the waves, in the Euripidean manner. But Phædra, distraught, backs over the edge of the cliff—impure and ironic parody of holy Britomart's fate!—and the Chorus proclaims her doom likewise. Minos has died in harness, beset by foes, a moment earlier. Hear the Messenger :—

The pallid King rose slowly, and spake like Death,
Saying, "This is the Doom declared by Zeus.
Evil was done, evil ensued; and now
Evil must end." And then he sat
Again upon his throne, and bowed his head
Down to his two stiff knees, and stayed and died—
Alone, untouched, indomitable.

The last Choral Ode foreshadows a new dispensation :—

Can a God-man be lord of himself and the hour,
Welding in one Love and Wisdom and Power?
Earth should kiss Heaven then.

The hearers are dismissed with the right tragic word of peace and consolation, spoken by Artemis, who tells how Hippolytus, "his passion spent—in calm of vigil and prayer," lives with the goddess "in communion not of this world." And the Chorus in a final word tells of "waiting with hope the promise of new day."

It is too early, perhaps, to set this fine close beside that of 'Samson Agonistes'; but the effect is got with the same understanding of true tragic method, attaining that "calm of mind, all passion spent," wherein is the finished work of *κάθαρσις*. But Mr. Hewlett's work will not be finished until, gathering up the threads of his pagan dramas, he weaves from them his 'Christus Patiens.' That, we are assured, will be no dreary cento, like the piece long attributed to Gregory of Nazianzus.

Throughout the Trilogy the author maintains a high level of imagery. Here and there we note a descent, due perhaps to over-audacity. Minos seems to be skilled in bacteriology when he uses the phrase—"spread spores of death"; and the metaphor "a flash in a pan" jars as an anachronism. But these are minor matters, which it is thankful to note. Of special interest is the weird use of salient Biblical phrases; for these, curiously enough, only heighten the dramatic effect, and never by any chance suggest anachronism. Still less are they irreverent.

The Mother of Goethe, "Frau Aja." By Margaret Reeks. (John Lane.)

THERE is something so wholesome and attractive about "Frau Aja" that a literary portrait of her, if executed with adequate care and skill, could hardly fail to interest English readers. Unfortunately, however, Miss Reeks's work is a little lacking in both those necessary qualities, and, though much of it is enjoyable, it cannot as a whole be regarded as really satisfactory. We feel a slight sense of irritation at inaccuracies, and discomfort at haphazard arrangement. It is significant, for example, that even in her brief Preface the author misspells the name of one of her chief authorities; a few pages later a distinguished German philologist appears oddly anglicized as "Erie Smith"; Henry Crabb Robinson is referred to as "an English gentleman, Charles Robinson"; and similar inadvertences are frequent. When German is quoted, it is often marred by orthographical errors, and when it is translated, the translation is not always to be relied upon; and there are a number of slips in matters of fact—to give a single instance, Merck is said to have died in his eightieth year. Such slips are individually perhaps of no great consequence, but collectively they cannot be ignored.

However, it is rather in its general construction than in its detail that the book strikes us as unsatisfactory. Miss Reeks has, we think, drawn upon 'Dichtung und Wahrheit' to an undue extent; indeed, it appears to be the main source for much of her volume. Now it is worth noting that Goethe has told us remarkably little about his mother either there or in his other autobiographical writings. No doubt she served to some extent as a model for such characters as Olympia in the early version of 'Erwin and Elmire,' Elisabeth in 'Götz,' and the "gute, verständige Hausfrau" of 'Hermann und Dorothea'; but he has left no definite and detailed portraiture of her. Indeed, though there is no reason to question his strong affection for his mother it must not be forgotten that after leaving his Frankfurt home he had comparatively little direct intercourse with her: his letters to her were by no means voluminous, his visits to her were rare and brief, and during the last eleven years of her life she never saw him. But in her own admirable letters and those addressed to her by various correspondents there is sufficient material to furnish a vivid picture of her personality, and we cannot help wishing that Miss Reeks had utilized them more largely, instead of repeating so much that is already accessible to English readers in the standard biographies of Goethe or translations of his works. It is not till Goethe is got safely off to Weimar that Frau Aja is allowed to come to the front of the stage and speak for herself.

The consequence is that the latter part of the book is decidedly superior to the

earlier. That the "Frau Rath" must have been a singularly delightful and refreshing person to meet may be gathered even from such of her utterances as are quoted here. The basis of her character was cheerfulness: she was fond of Götz's saying, "Fröhlichkeit ist Mutter aller Tugenden," and exemplified it in her life; she was absolutely genuine, and her optimism is free from any suggestion of smugness. Her philosophy was no blind and extravagant assertion that all's right with the world. "I am fond of my fellows," she says in a letter to Frau von Stein—we quote Miss Reeks's version—

"and old and young feel it. I go through this world without pretence, and all the sons and daughters of Eve find that comfortable. I demoralise no one—seek always to spy out the good side—leave the bad to Him who made men and understands best how to rub off the sharp corners; and in this way, I am well, happy, and pleased."

(Incidentally we may note that "without pretence" hardly represents the original "ohne Prätension," while "demoralise" is not a true rendering of "bemoralisire.") But life was not always an easy business even for her.

"Just to make the best of the present," she declares. "and not keep thinking how things might be different: that is how one gets best through the world—and to get through (all things considered) is the chief business."

Elsewhere she confesses, with a frankness that will awaken a response in many a sorrowful one:—

"I never could endure consolation; very few people are in a condition to realise the condition of the sorrowful, and so are poor comforters."

Without being by any means well-educated in the conventional sense of the term, Frau Aja had marked literary ability. She possessed a wonderfully lively imagination, a broad sympathy, and a sound judgment to which some of the foremost German authors of the day were glad to appeal: Wieland, for instance, was on the friendliest terms with her, and wrote her a number of his agreeably elegant letters. Wit she did not possess in any marked degree, and few bons mots of hers have been recorded. The happiest is probably the reply made by her in her last illness to an invitation sent by some friends who were ignorant of her condition; she must beg to be excused, she said, as she was engaged in dying. Wit perhaps scarcely goes with a temperament so hearty and capable of healthy enjoyment as hers, and it is really much more characteristic of her that on her death-bed she arranged all the details for her funeral and the entertainment of the guests, giving particular injunctions that there should be no scrimping of the raisins in the cakes, "for," she remarked, "that is a thing I never could endure in all my life."

The Beginnings of the American Revolution. Based on Contemporary Letters, Diaries, and other Documents. By Ellen Chase. 3 vols. (Pitman & Sons.)

IF the criterion of the "weakest link" were applicable to books, we should have to accord but summary and unfavourable notice to this extensive and really meritorious work. Its weaknesses—for the weakest link is here recurrent and conspicuous—are due to the author's unfortunate choice in making it so extensive, a choice by no means implicit in the undertaking. "The main purpose of the narrative," she tells us in the Preface, dated from Boston, "has been to make the outline of events in this neighbourhood live once more in all their wealth of humour and picturesqueness, as they were known by the actors." That was a laudable and large enough purpose, yet one which might have been successfully attained without the equipment and powers required for a survey of the political movement in two hemispheres. For a comprehensive work like Bancroft's, of course, intended to be the literary monument as well as the ample record of American nationality, an alertly divided attention and a striving after simultaneous view were both necessary. But then Bancroft did not begin till he was ready, and until he could work from the copious stores of mature and vitalized knowledge which constitute the essential qualification of the first-rate historian. From the writer on historical subjects less is required than this; but a more personal view of the whole, and a more definite grip of the relevant details, than we find in the pages of Mrs. Chase in which she looks beyond "this neighbourhood."

Here her knowledge seems to depend on the utilization of sources with great industry, but without sufficient discrimination. There are a crop of references on every page, but rarely (in these parts of the work) those which we should expect. For the safe statement that "Lord North is said to have supported the King against his own best judgment," the authority cited is neither Bancroft nor Lecky, still less the primary volumes of W. B. Donne, but the excellent compilation of American history by Messrs. Bryant and Gay. For knowledge of the changes intended by the Québec Act we are indebted, it would seem, to Frost's 'History of the United States,' a praiseworthy brief compendium some eighty years old. These instances are typical and anything but extreme. We are nearer to the average when we find the author's statement that "Edmund Burke strongly opposed the oppressive measures" is supported by a reference to the 'Life of Thomas Hutchinson,' the Governor of Massachusetts. Mrs. Chase seems to owe nothing to standard general histories like those above mentioned, or to such accessible and indispensable sources as the Grenville Papers, the

Chatham Correspondence, the Rockingham Correspondence, or the Correspondence of George III. with Lord North, neither does she appear to have looked into any of the significant political biographies (Chatham's, or Shelburne's, or Burke's), though two or three American lives are used and over-used with regard to affairs in England. As with the biographies, so with the main political literature. Chatham, as one would expect, is much in evidence. But the specimens of his speeches here given are a patchwork gathered from unlikely places and sedulously pieced together. The result, to be fair, is not so faulty as the method is destructive of confidence. But some values are lost. For instance, "America, if she fell, would fall like a strong man"—drops a point. The orator said "like the strong man"—a familiar synonym for Samson in those days, when the Bible was better known and less celebrated than now.

The result must be unsatisfactory when a writer's general knowledge of the period of which he writes has been gathered by such piecing of information. Then we may expect to find a prevailing lack of clear outline (because there is no clear mental view) alternating with factitious starts of particularity about what does not really matter. And no amount of intelligence will exclude positive mistakes when the wider relations and bearings of the "facts" brought into the account are unverified and unknown. Thus an impression is here given that certain sayings in Parliament were mere interjections, or exclamations. They are the sentences usually quoted from speeches of considerable length.

We may note a mistake which should have been impossible. "The Stamp Act itself was only carried by Pitt's insertion of the Declaratory Act." Let us waive the obvious slip, and credit the writer with meaning to say "The Repeal of the Stamp Act," &c. There still remains matter for correction. First there is the implied notion that the Declaratory Act was somehow embodied in the Repealing Act. This notion is not uncommon in American books, and seems to be caused by writers confusing the Declaratory Act of 1766 with the declaratory preamble to the Revenue Act of the following year. But further: to suppose that the Declaratory Act (whether Act, clause, or preamble) represented the constitutional views of Pitt, is totally to misapprehend the matters in question. "He looked in the face of Lord Chatham, and passed the Declaratory Act," says Burke, eulogizing Rockingham. But then Mrs. Chase seems to know little of Burke. Instead, she has Junius ("now generally identified with Sir Philip Francis"), whom she takes seriously as a fearless and authoritative publicist; and cites his letters as though they had been sent directly to the King, Grafton, and the other addressees. An American writer should have known that Wedderburn's name was not David, but Alexander—*teste* Walpole's "Sarcastic Sawney."

Nor do we think it fair to perpetuate the gibing reference to the author of 'Taxation No Tyranny' as "a pensioner of the Government." Surely it should be easy to credit Samuel Johnson, of all men in the world, with honest partizanship! He was not "a pensioner of the Government" in the sense the words are meant to bear, nor did his pension influence his politics. Had the old hero been living neglected in a garret, he would still probably have been as High Tory and outrageously anti-American as the sturdiest "backwoodsman" of his day.

Having been compelled to say so much about the faults of this work, we turn with relief to a view of its merits. When all is said, these are very great. The superficiality and uncertainty of the author's English chapters are happily counterbalanced by the diligence of her search and the thoroughness of her knowledge in all that belongs to her proper subject, "the occurrences of this neighbourhood." The first volume, beginning with the Stamp Act riots at Boston, ends with the historic Tea Party, having the so-called Massacre as the lurid intermediate incident. Each of these has become the subject of a respectable literature of miscellaneous record and testimony, which in the case of the Massacre and the Tea Party has been to some extent codified. Those diverse records are here well utilized, along with unpublished findings of the author's own, and whatever could be added by exact verification of topographical details past and present. So from the free quoting of contemporary accounts, and the precise noting of what was done or seen from point to point and moment to moment by a multitude of actors and witnesses, there results a more vivid representation of the aforesaid occurrences—also a more informing impression of what sort of people were engaged in them—than is to be found in any existing history of the Revolution.

This is still more true of the succeeding volumes. Vol. II. is the worse for large importations from the biographies of Hutchinson and Quincy (in England), but expresses well the gathering tension in America, and the strengthening of the idea, in the minds of colonists, that they might have to vindicate their claims by force of arms. The title of a chapter, 'Both Sides prepare for War,' expresses graphically what is going on—partly in pursuance of resolutions, but more largely by the simultaneous tacit decision and action of individual men throughout a countryside that was "a continual village." The latter half of this volume is concerned with the movements immediately preceding the epoch-making discharge of muskets on Lexington Green, to which dramatic incident ample justice is done.

Finally, for a token of thoroughness virtually the whole of the third volume is occupied with the history of the

remaining occurrences of that day. The long fighting retreat maintained by the British troops from Concord to Boston is accounted for step by step and almost shot by shot, and made vivid by constant reference to the observations, acts, and fortunes of persons and families all along the line of retreat. The volume closes with what is partly an itinerary, partly a visible panorama, of the speeding news of battle as it passed from province to province, city to city, and village to village—even to fishing boats at sea.

Its summoning effect, as seen here, suggests or confirms a view which we may find room to state. It is that the colonists, for all their half-forensic, half-dramatic contemplation of the possibility of war—and for all their sporadic accumulation of powder and shot and the rest—had yet never been able, in their heart of hearts, to think of war as really occurring. This again, we consider, was because, behind and above all their sense of quarrel with the English Government, was their sense of being Englishmen; and therewith a deep mute assurance that, whatever adverse things and unkind words might happen on the way, *that* was going to be with them to the end. Upon this assurance, and all the prepossessions and memories which gave it sanction, Lexington Green and Concord Bridge were a rude comment. They gave something of the shock which we may suppose a proud-spirited young wife to feel on receiving a first and unexpected blow—as an indignity more than an outrage, and a denial and a prophecy more intolerable than either. So the almost automatic instantaneity of response, made by thousands of individual men from far and near to the call of Massachusetts, was a measure not of the people's preparation, in the obvious sense, but of their surprise. Men's minds seem everywhere to have been invaded, not by anger, but by a trance of resolve, which simplified all reasoning and took them the nearest way to their only possible purpose. But, if the Americans were a greater people on the 19th of April, 1775, than they ever were before or have been since, it is because they were a people on whom the last things of the world had come, and because they were meeting them with a strength that was not in their daily lives, but an efflux from the generations of their race.

In conclusion, we hope that Mrs. Chase may some day recast her work, reducing the English part by a half and making the remaining half more perfect; also attending to the paragraphing and pointing throughout, and seeking skilled aid in the occasional Latin. Then her work will have a place which nobody will grudge it beside the best-established and most valuable contributions to American history. There are about seventy portraits; but we would gladly exchange half of these for a good topographical map of "this neighbourhood."

CANADA.

The New Garden of Canada: by Pack-Horse and Canoe through Undeveloped New British Columbia. By F. A. Talbot. (Cassell.)—This is the record, graphic and convincing throughout, of a singularly interesting journey. What enthusiasts call "the last, best West," e.g., the far north-west of Canada, is a territory regarding which comparatively few people know anything from actual experience.

The northern half of British Columbia is not only virgin soil, but is rich also in the charms of varied scenery, dense forests, towering mountains, rushing streams, untouched mineral resources, and untouched wild life. The whole province is something of a paradise for the hunter, the fisherman, the climber, and the woodsman. There is this also about it to stimulate interest, that before many years have passed it will be opened up by railways, ports, and towns. Reading this simple record of an observant traveller's wanderings, one may cordially agree in pronouncing pack-horse travel, or "trailing," by far the best way of spying out the land. Next to a man's own two feet, no means of locomotion brings him into closer touch with the country traversed. High on the banks of the Fraser river (where it runs swiftly, and is four hundred feet in width) the author camped with a settler named Keller. The passage about Keller epitomizes life in the wilds, and is worth quoting for that reason:—

"Keller was a host in himself. At evening, sitting round a log camp-fire, which threw ghostly shadows among the trees, he regaled us with stories and adventures innumerable which had befallen him through a wildly adventurous life—some grave, others gay, but one and all first-rate time-killers. Like so many others buried in the wilderness, he hailed from the United States, having been raised somewhere down on the Pacific coast. The quest for gold enthused him early in life, and he had searched patiently for the yellow metal from sunny California to ice-bound Alaska. He was in far-off Nome when he first heard about the upper reaches of the Fraser river.

"I had knocked about Alaska and Prince of Wales Island without striking much luck, so when I once more found myself in Vancouver I started off for Fort George. I heard that there was some good mineral country up round Tête Jaune Cache. I got hold of a canoe, came up, and cruised around to see how the land lay. That was five years ago, and I am still here. Yes, I am in solitary state. Another frontier lad, Wilson, and a pard, have a piece of land about fifty miles down the Fraser, and give me a call now and again. They're on the opposite side of the river at the moment. How do I like the life? Why it's the only life to lead, if one doesn't mind being lonely. Sometimes I am here for three months and don't see a soul, not even an Indian. If it hits me a bit too hard, I go off on a hunting trip after caribou, goat, sheep, or what not. I have been all over these mountains. Or else I go prospecting and exploring. Illness? You can never fall ill in this open, free air..... I am often away from here for weeks at a time. I just take my blanket, some small supplies, and my rifle, and off I go. Time has no worry for me. I don't know what is the day of the week, the date of the month, or the time, as I have neither watch nor calendar, and I certainly do not bother my head over either. I just work when I feel like it, and rest when I feel so disposed."

The book is stimulating reading throughout, for the author has obtained a store of valuable material, and handled it well.

The Golden Land: the True Story and Experiences of British Settlers in Canada, by Arthur E. Copping (Hodder & Stoughton), is a frank and breezy account of a journey across Canada, from Atlantic to Pacific, undertaken by the author with a view, apparently, to describing the experiences awaiting the typical emigrant from England.

Naturally, therefore, the author travelled in emigrant fashion, and the cheery record of the experiences of himself and Mr. Harold Copping (the latter contributes four-and-twenty very creditable illustrations in colour) proves them, at all events, to be good travellers, for the long rail journey in a "Colonist" car in Canada is not exactly an exhilarating jaunt. But Messrs. Copping clearly approached their task in the right spirit of good humour and determination to make the best of everything.

The Canadian climate makes for vigorous optimism; and this feeling characterizes every chapter in this readable volume. But the reviewer—who is familiar with the ground here covered, having travelled over it some eight or nine times—is able to testify that the author's enthusiasm is justified by the facts of the case. The emigrant who expects to receive wealth for the asking, or obtain it without exerting himself, in Canada, will be disappointed. Indeed, he had far better not go to the Dominion; for in no walk of life there is the idler welcomed or appreciated. It is a busy land of striving, hard-working people. But—and here is the gist of this book—it offers constant, abundant, and well-paid employment to the willing worker; for the same person it is wonderfully rich in opportunities of attaining independence; and more perhaps than any other country in the world, it is a land permeated by the spirit of hope, and the conviction of good ground for that hope.

Another important truth well illustrated by this book is that he who would succeed in Canada should go there as a learner, and not as a critic, a superior person, or one anxious to impose his own will and methods upon others. Knowledge of this will save valuable time for the immigrant, to say nothing of vexatious losses and wounded self-esteem. The people who have ascertained what methods are best suited to the conditions of life in Western Canada, for example, paid dearly for their knowledge, and cannot be expected to welcome ignorant or ill-founded criticism. Also, Canadians are not lacking in the sensitiveness which is natural to youth, in communities as well as persons. The prospective emigrant will find this narrative deeply interesting, and others should welcome a fair and truthful picture.

OUR LIBRARY TABLE.

ONE of the most interesting of the additional sketches in *The Newcomes* ("Centenary Biographical Edition," Smith & Elder) is a rough sketch, apparently by Thackeray himself, of Col. Newcome, in the opening chapter of the novel, indignantly quitting the Cave of Harmony. From its similarity to Richard Doyle's full-page illustration, it must have been intended for the artist's guidance. The Cave of Harmony, as we now know, was Evans's, of which there is a capital account in 1859, or five years after 'The Newcomes' appeared, in Sala's 'Twice Round the Clock,' the artist, William McConnell, giving a picture of it which may well pair off with that in "Mr. Pyp's" depicting the Back Kitchen of 'Pendennis,' i.e., the Cyder Cellars in Maiden Lane. In 1859, however, the risky vocalism of Capt. Costigan was no longer popular in Covent Garden. Among the other new illustrations is a photogravure of Thackeray writing, with his desk on his knee, in Onslow Square; and there is a very unflattering

portrait from a photograph taken in the United States.

Of Doyle's illustrations the present writer has never been greatly enamoured—at least of the full-page ones. But the initial letters are charming, and in his best manner; while the yellow cover with its fables, of which there is a facsimile, is surely one of the prettiest ever designed. One wonders what Thackeray himself thought of the Doyle embellishments. They were much criticized at the time, and Frederick Locker was unlucky enough to tell Thackeray jestingly that they would be mistaken for his own, a *boutade* which was neither well-received nor immediately forgiven. New MSS. of Thackeray have recently been discovered. It would be interesting to learn whether there is anywhere any sketch or note of that history of "J. J." to which reference is made in the penultimate paragraph of the book.

Life and Flowers. By Maurice Maeterlinck. Translated by Alexander Teixeira de Mattos. (Allen & Sons.)—An essay on the devices which various plants adopt to secure fertilization, and entitled 'The Intelligence of the Flowers,' is M. Maeterlinck's most considerable effort in this volume, in which, as the title might suggest, the themes, though often profound, are treated with an unexacting sentimentality. Even when the ideas are fiercest and most revolutionary, the language remains almost hyperbolically caressing. M. Maeterlinck "roars you as gently as any sucking dove." He pursues, in short, his familiar method of exposition, and blends philosophy with poetry by sacrificing something of the cohesion of the one and the clarity of the other—producing a result which to many readers is impressive, stimulating, and beautiful. His attitude of mind, and the style which it dictates, are perhaps of a temper to which French is as a language more hospitable than English; and he no doubt owes his wide reputation in this country to admirers who have felt the charm of his works in the original. Perhaps it is because an atmosphere of disillusionment is the exception in our poetry that poetic motive and association, whether employed in verse or prose, have to accept, with the advantages, the disadvantages of being taken seriously; we regard the instincts of the poet as structural as well as ornamental; and they never fully satisfy us except when they fulfil both functions. The poet—and what is M. Maeterlinck if he is not a poet?—enjoys, of course, more ease and freedom if his symbols and images are accepted merely on their face value; and it may be because he does not dream of having them accepted otherwise that M. Maeterlinck indulges in what, to our taste, appears a surfeit of personification and metaphorical sleight-of-hand, which, whether the theme be ethics, dynamics, religion, topography, or botany, is apt to confuse, and adds little that is helpful to our sense of the mystery of things.

M. Maeterlinck's allegorizing carries him sometimes to the verge of absurdity. He describes, in one essay, some of the distilling processes in the factories at Grasse. The heights of tragedy and every phase of human emotion are drawn upon for the picture. The flowers, in one process, are laid upon a bed of fat. "As the result of what hypocritical wiles," asks M. Maeterlinck, "of what unctuous promises, does the fat obtain their irrevocable confidences?" He cannot tell; but the tragedy, in any case, is not ended, for "it now becomes a matter of making the wan miser disgorge.... This

is achieved, not without difficulty. The fat has base passions which are its undoing. It is plied with alcohol, is intoxicated, and ends by quitting its hold." The scent, the heroine, has confided in or is surrendered to a fresh villain, from whom in turn she must be rescued! It is all, no doubt, meant to be amusing, and might possibly have been so, were it less typical of M. Maeterlinck's method throughout.

WE have received the second volume of *Standard Books* (Nelson), which deals with a range of subjects on which the average librarian will be more frequently consulted than on those in the first volume—religion, science, and the useful arts, agriculture, medicine, engineering, theoretical and practical, metallurgy, technology, and a number of arts only less important. The selection of books on scientific subjects will be found ample enough for all purposes except those of the specialist. The task of compiling a selective bibliography is one the difficulty of which may be easily underrated. The work of the experts who have been engaged will be found of the greatest practical utility not only to librarians who may wish to enlarge the scope of their libraries, but also to those who may be put into the position of having to advise others in the choice of books on subjects of which they know nothing, say 'Salesmanship and Commercial Travelling' or 'Laundry Practice' or 'Naval Law.' The work should be on the desk of every public librarian in the country.

IN *Table d'Hôte* (Hodder & Stoughton) Mr. Pett Ridge serves his bill of fare in four courses—Hors d'Œuvres, Joints, Sweets, and Savouries; but the distinction between the various dishes seems to have been made in a somewhat arbitrary manner. The order of their occurrence, however, does not affect their merit, and the book maintains a far higher standard than 'Light Refreshment,' last year's companion to it. But even the present collection is not so pleasing as a book like 'Mord Em'ly,' which perhaps owed something of its success to its continuity; for in his volumes of short stories Mr. Pett Ridge does not always make his necessarily abrupt changes of place and time clear enough. 'Moving Pictures' is a clever description of an opium-smoker's visions: so far from being extravagant, these are endowed with an air of restraint that carries conviction. Of the other articles, 'Time's Method' and 'Surroundings' are particularly thoughtful.

A Holiday in Gaol, by Frederic Martyn (Methuen), is a book of prison experiences written from a somewhat new standpoint. The author—a man of education—was arrested on a charge of obtaining money by false pretences. Although, in his opinion, both the charge and the sentence passed on him were unjust, he writes without any trace of bitterness. He has no sympathy with those ex-prisoners who enumerate their woes in newspaper or book form. His memories are cheerful. "I have recently," he begins by saying,

"returned to work from the holiday of a lifetime, feeling as if I am wound up to go another fifty years on top of the half-century I already have to own to, and with a capacity for enjoyment that I don't remember to have possessed in my salad days. I have been taking the finest rest cure that the whole world affords: I have been doing eighteen months' hard labour in an English prison."

There is not much that is novel in the book except the standpoint. Warders, prison doctors, governors, and even prisoners, appear in a pleasant light. The author remembers the warders with gratitude:—

"If there are any persons in our prisons who do work, that can honestly be described as 'hard work,' it is the warders, and not the men who are sentenced to it."

He is not so enthusiastic concerning detectives, who appear in the least favourable light of all. The book is very readable, and full of interest to the social student.

The Trial of the Stauntons, edited by Mr. J. B. Atlay, is the initial volume of a new series of "Notable English Trials," published by Messrs. Hodge & Co., of Edinburgh. The trial, which took place before Mr. Justice Hawkins at the Old Bailey thirty-four years ago, is wholly lacking in the dramatic elements that occasionally lend a romantic touch to the annals of the criminal law. Apart from its medical aspects, the only interest of the sordid case lies in Sir Edward Clarke's speech on behalf of one of the prisoners, which may be regarded as a model of forensic acumen and eloquence. Mr. Atlay's long introduction to the report of the trial, in which he gives a connected story of the circumstances of the death of Harriet Staunton, is marked by lucidity and fairness. The volume is illustrated by portraits of some of the principal figures at the trial.

"Pie-Powder": being *Dust from the Law Courts*. Collected and recollected on the Western Circuit by a Circuit Tramp. (John Murray.)—Not a few readable books on the borderland of the law have been published in recent years, but this volume of reminiscences of the Western Circuit, written by a King's Counsel whose pseudonymity has easily been pierced, may be accounted the most entertaining of them all. Not only has the author some good stories to tell; he possesses, unlike many lawyers who recount their experiences in the courts, an agreeable literary style. All his anecdotes, even the oldest of them, are told with freshness and conciseness. "A Circuit Tramp" does not forget the Dickensian associations of his circuit. Both Mr. Justice Gaselee, who served Dickens as the model for Mr. Justice Stareleigh, and Serjeant Bompas, who was the original of Serjeant Buzfuz, were members of the Western Circuit. It would seem that another link between 'The Pickwick Papers' and the Western Circuit exists in "the original warning-pan which Mrs. Bardell was implored not to forget"; for Mr. Foote, K.C.—there is no further need to disguise his authorship of this acceptable volume— informs us that "it has long stood on the landing of a West-Country hotel frequented by the Bar Mess." But on what authority he makes this statement he does not explain. To Lord Bowen, one of the wittiest and most scholarly members of the circuit, is attributed the well-known saying, "Truth will leak out—even in an affidavit," which has often been placed to the credit of Lord Justice Mathew. As a matter of fact, the real authorship of the epigram belongs to Charles Reade, though the form in which he produced it, "He had spoken the Truth! And in an Affidavit!!!" lacks, no doubt, the artistic finish of Lord Bowen's version.

One of the neatest jokes in the book is associated with the name of Edward Bullen, whose hereditary instinct for special pleading was tempered by a rare sense of humour. He once disturbed the gravity

of the Court of Appeal by reading this passage from a statement of defence in an action for seduction: "The defendant denies that he is the father of the said twins, or of either of them"—a jest which he apologetically and untruthfully attributed to a mistake in his pupil-room. Another good story with the same quality of brevity is provided by the author in discussing the class of witnesses who are over-prudent in their qualifying statements. "The prisoner's wife stood at the bottom of the stairs and called out 'Tom, Tom,' or words to that effect," is given as a classical example of this kind of testimony.

The book is not free from errors. Lord Bowen was a Lord of Appeal, not a Lord Justice, when his brilliant career was prematurely brought to a close; and Mr. Brand, not Mr. Peel, was Speaker of the House of Commons in the stormy days of the Bradlaugh controversy. But these are small defects in an attractive work. A more serious fault is the absence of an index.

THE DILKE KEATS COLLECTION: A QUESTION OF HANDWRITING.

46, Marlborough Hill, N.W., May 22, 1911.

AMONGST the books of exceptional interest from the Dilke library specially mentioned in *The Athenæum* of 6 May, 1911, there were two which were gravely misdescribed in Messrs. Christie's catalogue of the sale which took place at their rooms on May 9th; these were the copy of 'Endymion' alleged to have been Keats's own copy supplemented by transcripts in his own writing from a number of his minor poems, and the copy of Milton's works "with many lines scored and numerous MS. notes in the handwriting of Keats, and a few by the Dilke, who was the poet's friend."

On receiving the catalogue and seeing paragraphs in *The Daily News*, which also had been misled by the auctioneers (of course, quite innocently), I hurried off a note of warning on the subject of the book called "Keats's copy of 'Endymion,'" which I knew not to be Keats's copy. The belated appearance of that note of warning in *The Daily News* on the morning of the sale, and the views expressed by myself and several experts on the two books, induced Messrs. Christie to withdraw both lots; but, as wide publicity has been given to two books masquerading by misadventure in the character of personal relics of Keats, I feel that I, who owe so much to the poet's friend Dilke, and also to his grandson, the late Sir Charles Dilke, am bound to communicate the facts of the case to the literary journal so intimately associated with both grandfather and grandson, not to mention the first baronet of the name, the "Dilke's boy" of Keats's letters, who was a Westminster scholar when the two books took on their semi-manuscript form, and who in due time, and turn, became an *Athenæum* proprietor.

There can be no doubt that the note of Sir Charles Dilke on which the cataloguing of the 'Endymion' was based, was written at a time when the late owner had become convinced that the script in which the minor poems are written was the "copying hand" of Keats; but to an expert student of Keats's ways, surrounded by a sufficient material for a final judgment on the point, nothing can be clearer than the impossibility of his having produced those copies. For future identification, the volume should perhaps be here described a little more fully than I have described it before, for, of course, I was for a long time very

familiar with it. It is, then, primarily one of the earlier copies of the original edition, one of those containing the single-line *erratum* page; to this was added a quantity of blank paper, much of which remains blank to this day; and the volume thus formed was bound in the brown polished calf of that period, with the edges trimmed according to the then prevailing fashion. The front cover, now detached, has inside it the heraldic book-plate of Charles Wentworth Dilke, the friend of Keats.

The printed book is practically free from textual marks, though Keats had something to say about errors and liberties. The mistake dealt with in the *erratum* page is corrected, and a trifling number of verbal misprints discovered subsequently are also amended in ink, but not in Keats's writing. The special characteristic of this copy of 'Endymion' is the profusion of under-scorings and marginal markings, which are obviously those of an appreciative reader. Although it is not easy to tell one man's horizontal underlining from another's, it is not impossible: in this case minute analysis is needless, because it is inconceivable that Keats, who had already outgrown 'Endymion' by the time it was through the press, sat down pen in hand and underscored hundreds of lines of his poem. Beside that consideration the lines drawn vertically in the margin have a very curious feature: they are not always simple straight lines, but are frequently drawn jagged like a kind of cross between the edge of a saw and a conventional flash of lightning. That method is, as one would expect, in regard to Dilke's "bosom" copy of 'Endymion,' Dilke's method; I have never seen it employed by Keats, whose markings of passages are straight across or straight down—or fairly straight, to be particular. It is not for a moment tenable, and never has been, that this marked book was "Keats's own copy," though a hasty mention of it in a paper contributed to *The Athenæum* of October 26th, 1872, is framed as if the book was Keats's copy. That paper was mainly about the Milton, and was signed "An Admirer of Keats." I fancy Sir Charles wrote it; and I know he was at that time busy getting relics of Keats and going over those he already had; but I do not think he had gone carefully into the subject of the 'Endymion.' Thus far of the printed *Endymion* of 1818 read and marked by Dilke: now of the manuscript poems following it.

My first acquaintance with Sir Charles Dilke was, if I recollect rightly, in the years between the issue of Keats's Letters to Fanny Brawne (1876) and that of the edition of the poetical works and other writings of Keats in four large volumes (1883). At all events, it was while I was preparing that work of some years that he generously placed the whole of his Keats collection at my disposal, and aided me with all personal knowledge of the subject of which he was the depository. By those transcripts of minor poems in his grandfather's copy of 'Endymion' both he and I were at that time baffled. I saw, of course, that each was an authentic representation of the text in one or other of its stages; but I had great difficulty in believing that the handwriting was that of Keats in any mood or for any special purpose. There were some slight superficial resemblances to Keats's script; and Sir Charles's leaning was certainly to the view that Keats had copied the poems out for Dilke. It is a well known weakness of us collectors to go on magnifying and glorifying our treasures as long as we are permitted to live with them. I can picture

Sir Charles Dilke, in his later years, sitting lonely among his fascinating relics in that wonderful little sanctum of his somewhere up at the top of No. 76, Sloane Street, growing more and more decided in his view that this was a clerkly script of the poet's; whereas my own case was that, having exhausted the textual yield of that book in 1883 and returned it to its owner, I had no occasion to re-examine it critically until this instant spring-tide. My chief difficulty in the way of an uncompromising denial had been that the writing was not that of any one of Keats's friends whose faithful transcripts I had found so valuable for textual purposes, and especially for various readings. It was not George Keats, or Tom Keats, or Brown, or Woodhouse, who had made these copies, opposite the first page of which Dilke had written, in the upright hand I was already familiar with, a cautionary note for posterity that Keats's "innocence of spelling" must be borne in mind; and in that hand other notes about Keats appear towards the close of the blank paper part of the book. Meanwhile, I have been steadily getting more familiar with the handwritings of the whole circle; and when this book was announced for sale I went over my collection of relative autographs, with the result that I found writing of Keats's friend Dilke, which settled the matter. The script which Sir Charles Dilke seems to have accounted for to himself as a copying script of Keats's slopes from left to right in the customary manner of old-fashioned right-handed mortals; and that is how Dilke wrote when he knew Keats and worked in the Navy Pay Office. The copies of minor poems added in manuscript to his own reading and working copy of 'Endymion' were certainly made at that period by himself; they and the upright notes, both in that book and in the presentation copy of the 'Life, Letters, and Literary Remains,' sold at Christie's on the 9th of May, are the work of one and the same hand, though some thirty years or more separate the earliest from the latest.

Of Keats's "copying hand" a great deal has now long been accessible, notably in the fair copy of 'Endymion,' from which that poem was set up in type, the fair copy of 'Lamia' used for the same purpose, both of which are, I understand, in the great collection of Mr. Pierpont Morgan, and, very notably, in the large volume of Keats's holograph letters now in the Houghton-Crewe collection, and the twenty-eight-page letter which ought to be in that volume but was recently sold by public auction in America and is said to have passed into the hands of a well-known collector who has other manuscripts by and about Keats. In those long journal letters Keats constantly interrupts the delightful thread of his discourse to "copy out" poetry which he has been composing "since our last." With all those holographs I have just mentioned, save the twenty-eight-page letter in the States, I am familiarly acquainted, and I do not think there is anything in them to give the least colour to the hypothesis that the poet had a copying hand materially differing from his composing hand, or sensibly resembling (save in an occasional capital such as two intimates will slide into imitating from each other) the Navy Pay Office hand of Dilke.

Even while I was dealing with this question came a charming little bit of evidence not known to me before. Messrs. Maggs Brothers, of 109, Strand, have just published a catalogue in which they offer for sale Emma Isola's (Mrs. Moxon) autograph album, a very rich one containing among its

gems Keats's 'Sonnet to his Brothers,' published in his first volume (1817). It leaps to the eyes that this, which is one of the fair copies made by Keats, is just in his ordinary hand. In editing this sonnet I have already dealt with three textual documents (1) Keats's pencil draft of the two quatrains, very immature; (2) a manuscript copy, complete and mature, by Thomas Keats; and (3) the printed text of 1817. The Emma Isola holograph varies in detail from all three; and I have no doubt that Tom made his transcript from yet another copy by John.

Keats's letter to Taylor on the subject of the printed 'Endymion' and its errata, about to be sold by auction at the rooms of Messrs. Sotheby, Wilkinson & Hodge, with the rest of the late Mr. Huth's magnificent collection of autographs, has also something to say on this handwriting question, and especially as to the identification of "Keats's own copy"; but to this I hope to return on a future occasion.

Keats's little Milton, annotated in his own writing and presented by him to Mrs. Dilke, was also among the Dilke treasures which I knew familiarly before 1883: it was the only one I knew and used for the large edition of Keats and for the Glasgow "Complete" edition of 1900-1901. At the turn of the century it was already on loan in the Chelsea Free Library; and I must have seen it there when transferring from the large edition to the small the notes on 'Paradise Lost,' illustrated by all the marked passages, though I do not think I had to re-examine it at all intimately on that occasion. Certain I am that Sir Charles had never told me about any other Keats copy of Milton, and that I had never examined the book catalogued and withdrawn by Messrs. Christie—I must not say "never seen," for my friend Mr. Hudson tells me that it was in one of the treasure cases of the sanctum when he received me there for Sir Charles on a visit connected with the preparation of the Oxford Keats (some time in 1906). That I did not become practically seized of its existence was due to the fact that I was then dealing only with Keats's poems. The recent announcement that Keats's Milton was coming to the hammer left a regretful impression in my mind that it was not passing to Hampstead after all; and, on my first visit to the auction room on May 5th to settle the Dilke script question, I did not even ask to see my old friend the Milton. Recurring to the catalogue on the 6th, and also to my own published notes of 1883 and 1900, I was pulled up by the following note of Sir Charles quoted in the catalogue:—

"The note on the Sonnet to Vane [end fly-leaf] though evidently in the writing of Keats, contains opinions which are expressed in, I should say, my grandfather's words. Is it possible that in the early days of their friendship, to which by both handwritings it appears to belong, they worked through this book together?"

Finding no trace in my printed record of any note of Keats on the Sonnet to Vane, I was attacked by a suspicion of my own exhaustiveness. Could I possibly in 1883 and again in 1900 have overlooked a note of Keats's on the "end fly-leaf?" Proceeding a second time to the auction room, I asked for the Milton, and found to my amazement (with a dash of relief from the self-suspicion just mentioned) that this was not the Keats Milton at all, but another copy of a different edition, marked and underlined and profusely annotated, mainly in the Navy Pay hand of the Keats transcripts in the 'Endymion,' but with

notes on pages 490-2 in the later handwriting of Keats's friend Dilke.

Always glad to take advantage of that wisdom which we are taught to associate with a "multitude of counsellors," I was pleased to find a bevy of experts in possession of the field. The two Mr. Frank Sabins, father and son, Mr. Daniel of 33, King's Street, St. James's, and Mr. Bertram Dobell, presented a notable array of qualified counsellors; and there was no difference of opinion between the five of us. A minute examination of the three books which came into the discussion—the third being the Dilke copy of the 'Life, Letters,' &c., of 1848, convinced us all that the whole three must, so far as their manuscript value is concerned, be ascribed to Charles Wentworth Dilke, the distinguished man of letters who virtually founded *The Athenæum* and was for years the life and soul of it.

One very striking point of identity in the printed 'Endymion' and the little Milton under discussion is the manner of the vertical lines in the margins, some straight and some with a saw-like jaggedness that evidently had a different value from that of the straight ones.

I paid a third visit to King Street on the morning of the 9th, partly to make assurance doubly sure by looking over the books once more, but mainly to note what edition of Milton Dilke had used, and what bearing his note (if any) at the head of Book IV. of 'Paradise Lost' had upon Keats's, and upon Sir Charles Dilke's suggestion that the two men had "worked through" Milton together. Keats read, marked, and annotated the 'Paradise Lost' in a pocket edition in two volumes published in 1807 by W. and J. Deas, of High Street, Edinburgh, and presented it to Mrs. Dilke with an inscription in his own writing; and, unless I am mistaken, Sir Charles, under the signature of "An Admirer of Keats," gave an account of the treasure in *The Athenæum* of October 26, 1872. Dilke's notes and markings were made in an edition (also in two volumes) printed by S. Hamilton of Weybridge, and published in 1811 in London by Walker, whose "pocket classics" had considerable vogue last century.

In Keats's fourteenth note on 'Paradise Lost,' at the head of Book IV., we read:—"A friend of mine says this Book has the finest opening of any." And then he enlarges upon the beauties of the opening, and closes with the words "nothing can be so more than Delphic." Turning to the head of Book IV. in the Dilke copy we find a note which goes far to identify him as the friend, and to give great weight to his grandson's shrewd surmise that the two men were working through the book together, though using separate copies instead of one and the same copy.

The friendship of Keats and Dilke and their intimacy at Hampstead form a pleasant recollection, fully worthy of the pious commemoration which Sir Charles devised. Hampstead has many high associations, but none higher than that with the memory of Keats. Keats had many friends, but Charles Wentworth Dilke ranks among the most distinguished of his inner circle of intimates. It is not for beggars to be choosers, but the splendid collection of Keats-Dilke relics of which the Borough of Hampstead is to be the fitting depository would be greatly enhanced if those charged with the fulfilment of Sir Charles's munificent desire found it practicable and advisable to place those two additional books with the other treasures. The excessive money value which they would have had if the

writing in them had been Keats's may well have seemed a bar to their transfer from the Sloane Street *sanctum* to the Chelsea loan collection; but Dilke's copy of 'Endymion' with its transcripts is a veritable labour of love, and Dilke's annotated Milton a striking record of active sympathy between a poet and a critic in the Hampstead circle of distinguished men.

H. BUXTON FORMAN.

COMMERCE v. LITERATURE

A REVIEW copy of my forthcoming novel 'Thus Saith Mrs. Grundy' will reach you shortly. It has been "banned" by some of the libraries under circumstances of great interest to book reviewers.

My publishers, John Long & Co., state that the Libraries Association now requires all publishers to submit author's proofs of all forthcoming fiction to this Association.

My novel (my first) was so submitted. Certain passages were blue-pencilled. And I was called upon to re-write my book to the tastes of the circulating libraries, or to suffer the penalty of being "banned."

I decline to accept the censorship of the circulating libraries before the reviewers and the public had the chance to judge of my work, and I have held my publishers to their contract to publish my book in the form in which they accepted it.

The formation of this most dangerous understanding between publishers and libraries betrays British literature entirely into commercial hands. It is a position which critics and authors have a right to resent.

If the reviewers condemn my book, their verdict is backed by literary training. But I cannot accept Mr. Boots, the chemist, or book purveyors as the censor of British literature and morals. The objection to my book is that a "Eugenic" character decides that his dipsomaniac wife is unfitted to be the mother of his children.

I await the verdict of the reviewers, who, alone, have the expert right to pronounce on an author's work.

If they condemn me, I will do better next time.

(Miss) ANNESLEY KENEALY.

A BIBLIOGRAPHY OF SHAKESPEARE.

Westminster Public Libraries, May 31st, 1911.

MAY I explain to Mr. Jaggard that the word "Press" in his use of it, implies a printing press, and is inaccurate as applied to a publishing office? Where is the Shakespeare "Press"; where are its founts? If the Shakespeare Bibliography was not printed at Stratford—and Mr. Jaggard's statement that "a portion of the printing in connexion with it was executed in the poet's town" is curiously vague—then it is incorrectly described, and my criticism was justified. The description is misleading, as it misled me, and no doubt others, into attributing it to the better-known Shakespeare Head Press, which is a Stratford press. I am not expressing any opinion on the merits or demerits of Mr. Jaggard's book, but, if it be all its publisher claims, it does not require such adventitious aid.

FRANK PACY.

SALE.

ON Wednesday, May 24th, and the two following days Messrs. Sotheby held a sale of books and manuscripts which included a portion of the Library of Mr. S. R. Crockett, the well-known novelist. Among his books were: The Alpine Journal, 17 vols., 1864-95, 21l. 10s. The Arab Nights, translated by Sir R. Burton, 17 vols, 1885-97, 23l. Fraser, The Chiefs of Grant, 3 vols., 1883, 15l. Notes and Queries, 107 vols., 1850-99, 19l. 10s. Pennant, Works, 34 vols., 1776-1814, 19l. Pepys, Diary, 10 vols., large paper, 1893-9, 15l. 5s. Whaling Voyages, MS. on 348 pp., circa 1800, 25l. 10s. Beaumont and Fletcher, Comedies and Tragedies, 1647-52, 25l. Chronicon Nurembergense, 1493, 22l. 10s. Curtis, Flora Londiniensis, 5 vols, 1835, 15l. Froissart, Chronicles, 2 vols. in 1, 1525, 21l. Gould, Birds of Great Britain, 5 vols., 1873, 25l. Purchas, Hakluytus Postumus, 5 vols., 1625-6, 31l. Shakespeare, First Folio, 1623, 105l.

The sale also included the following: Horae, Dutch, 15th century, 25l. Virgil, Opera, 3 vols., 1754, 15l. Livre curieux et utile pour les Scavans et Artistes, 1690, 19l. The New Testament, Tyndale's Version, 1534, 16l. 10s. Gruterus, Animadversiones, 2 vols., 1595, bound for Marguerite de Valois, 100l. Suckling, Fragmenta Aurea, 1646, 30l. St. Evremond, Œuvres, 5 vols., 1706, 16l. 10s. Marguerite de Navarre, Hép-tameron, 3 vols., 1780-1, 25l. 10s. L'Étourdie, 2 vols., 1754, bound for Madame du Barry, 26l. 10s. Prières Chrétiennes, MS. written by Nicolas Jarry, 1640, 310l. Prize Medal presented to Keats at the Rev. Wm. Thomas's Academy, Enfield, 1810, 89l. Silhouette Portrait of Keats as a Schoolboy, 21l. R. L. Stevenson, The Surprise, 4 pp. n.d., 71l. Brasheanna, 4 sonnets, original autograph MS., 122l. The Graver and the Pen, n.d., 17l. 10s. Ruskin, Works, 37 vols., 1903-9, 21l. Bossuet, Divers Écrits, 1698, bound for Madame de Maintenon, 16l. 10s. Allott, England's Parnassus, 3 vols., 1600, 41l. Hore B.V.M., printed by Nicolas Hygman, Paris, 1520, 125l. Barnardus, Sermon, 1495, 16l. 10s. Rondeaux et Ballades, MS., French, 16th century, 29l. J. de Voragine, Legenda Sanctorum, printed at Augsburg, c. 1472, 20l. Walton and Cotton, The Compleat Angler, 2 vols., 1653-76, 900l. Painter, The Palace of Pleasure, 2 vols., 1573, 17l. Missale secundum ordinem trajectensem, German, 1457, 128l. The Spanish Armada, contemporary MS. relating to the English plans for defence, 32l. Henry VII., MS. Services at Court, 17l. Daniel, A Panegyricke, 1603, 17l. Essai sur les Galères, MS., c. 1690, 15l. Histoire de Philippe de Valois et du Roi Jean, 1688, 15l. Kösberg, Calendarium Germanicum, 1475, 42l. Mantuanus, Opera, 2 vols., 1513, bound for Prince Eugène, 27l. 10s. Antiphonale, Italian, late 16th century, 44l. Bembo, Le Prose, 1525, annotated by Tasso, 60l. Henry VII., letter signed and with holograph subscription 37l. Recueil d'Estampes, 2 vols., 1729, bound for the Duc d'Antin by Padeloup, 155l. Shakespeare, Second Folio, 1632, 19l. 10s. Terentius, Commentary, 1472, 16l. Strada, Histoire de la Guerre de Flandre, 2 vols., 1650-4, bound for the Duchesse de Montpensier, 120l. Histoire des Guerres Civiles de France, 2 vols., 1657, bound for the same, 120l. Virgil, Opera, 1642, 18l. An Establishment for the New Raised Forces, 1660, MS. on vellum, signed four times by Charles II, 710l.

Bunyan's copy of Foxe's Book of Martyrs, 3 vols., 1641, the property of the Bedford Literary Institute, which was to have been included in this sale, was withdrawn by the Trustees of the Institute in consequence of the action of the Attorney-General. Previously there had been a good deal of discussion on the subject in the press, and we presume that the exact circumstances of this gift to the Institute by various subscribers are being scrutinized from a legal point of view. The total of the sale was 6,202l. 11s.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

- Besant (Annie), The Riddle of Life, and How Theosophy Answers It, 6d. net.
- The chapters contained in this little book appeared in serial form in *The Theosophist*, under the heading 'Elementary Theosophy.'
- Boehme (Jacob), The Forty Questions of the Soul and the Clavis, 10/6 net.
- Translated by John Sparrow, reissued by C. J. B., with emendations by D. S. Hehner.
- Dean (Rev. J. T.), Visions and Revelations: Discourses on the Apocalypse, 5/ net.
- A popular exposition, recognizing the immediate contemporary meaning of its sayings to the people of the first century.
- Friedlander (Gerald), The Jewish Sources of the Sermon on the Mount, 4/6 net.
- Great Texts of the Bible, edited by the Rev. James Hastings: 2 vols., Genesis to Numbers; and Acts and Romans i.-viii., 10/ each.
- A series of comments which should be useful to preachers and teachers.
- Kent (Charles Foster), Biblical Geography and History, 6/ net.
- Contains 16 maps. In the Historical Series for Bible Students. The author has gained practical information by camping for many months in Palestine.
- Macphail (Rev. S. R.), The Epistle of Paul to the Colossians, 1/6
- One of the Handbooks for Bible Classes and Private Students.
- Robertson (Rev. Archibald), Bishop of Exeter, and Plummer (Rev. Alfred), A Critical and Exegetical Commentary on the First Epistle of St. Paul to the Corinthians.
- Part of the International Critical Commentary.
- Robertson (Rev. Stuart), The Rope of Hair: Short Sermons to Children, 2/6
- Robinson (Arthur W.), The Voice of Joy and Health, 3/6
- The first six chapters consist of lectures delivered at an "Abbey Service," in St. Margaret's Westminster, during the time that the Abbey was closed in preparation for the Coronation of King George. Three others have been added to them. The aim throughout is to set forth the principles of earliest Christianity simply and freshly, in the hope that many may be helped to gain to-day a fuller measure of the joy and health which were its outstanding characteristics.
- Simon (Oswald John), "What Think Ye of Christ?" a Jewish View of Christianity, 1/
- A lecture delivered 1886 at a Christian Literary Society in London, under the Chairmanship of Joseph Jacobs.
- Worley (George), The Church of the Knights Templars in London: a Description of the Fabric and its Contents, with a Short History of the Order, 1/6 net.
- Second edition, with 32 illustrations. In Bell's Cathedral Series.
- Fine Art and Archaeology.*

- Edited and translated by Don Martino de Zilva Wickremasinghe.
- Evelyn-White (C. H.), Cambridgeshire and the Isle of Ely, 2/6 net.
- With 24 plates. In the County Churches Series.
- Lethaby (W. R.), Westminster Abbey and the Antiquities of the Coronation, 2/6 net.
- With 12 photographic plates, and 13 other figures in the text.
- Willmott (Ernest), English House Design, a Review, being a Selection and Brief Analysis of some of the Best Achievements in English Domestic Architecture from the 16th to the 20th Centuries, together with Numerous Examples of Contemporary Design, 10/6 net.
- Poetry and Drama.*
- Agamemnon of Æschylus: the Greek Text with English Verse Translation Parallel, by Sixth Form Boys of Bradfield College, 1/6
- To be performed in the Open Air Greek Theatre at Bradfield College, on June 10, 12, 13, 15, and 17.
- Ayer (Frederick Fanning) Bell and Wing, 10/6 net.
- Numerous poems.
- Buddhist Legend of Jimûtavâhana from the Kathâ-Sarit-Sâgara (The Ocean-River of Story), dramatized in the Nâgânanda (The Joy of the World of Serpents), a Buddhist Drama by Sri Harsha Deva, translated from the Sanskrit by the Rev. B. Hale Wortham, 1/ net.

Dodge (Henry Nehemiah), John Murray's Landfall, a Romance and a Foregleam, 5/ net.

Broken by domestic affliction and his excommunication from the church, John Murray fled in 1770 to the New World, where the commanding faith of another man startled him into new life.

Hare (Kenneth), The Green Fields, 1/ net.

A collection of short poems, in the Vigo Cabinet Series.

Heckscher (Robert Valentine), Through Dust to Light : Poems from an Apprenticeship, \$1 net. Rubāiyāt of Omar Khayyām, 6d. net.

Rendered into English verse by Edward Fitzgerald. This little volume contains not only a reprint of the first edition, but also of the second, and a life of Omar Khayyām by Mr. Fitzgerald.

Wilcox (Ella Wheeler), Choice Selections, 1/ net. School edition, edited by Rev. A. A. C. N. Vawdrey.

Philosophy.

James (William), Some Problems of Philosophy : a Beginning of an Introduction to Philosophy 4/6 net.

Lindsay (A. D.), The Philosophy of Bergson, 5/ net.

History and Biography.

Acts of the Privy Council of England, Colonial Series, Vol. IV. A.D. 1745-1766, 10/

Edited through the direction of the Lord President of the Council by James Munro, under the general supervision of Sir Almeric W. Fitzroy.

Austin (Alfred), Poet Laureate, 1835-1910, Autobiography of, 2 vols., 24/ net.

Bax (Ernest Belfort), The Last Episode of the French Revolution : being a History of Gracchus Babeuf and the Conspiracy of the Equals, 6/ net.

The name of Babeuf became prominent in 1795 when his secret society was formed. Although a failure, the movement was a precursor of modern Socialism, and as such the author claims the reader's interest in it.

Bury (J. B.) Romances of Chivalry on Greek Soil, 2/ net.

The Romanes Lecture for 1911 delivered in the Sheldonian Theatre, May 25.

Collier (Price), England and the English from an American Point of View, 2/6 net.

New edition, with a foreword by the Earl of Rosebery.

Farquharson (Robert), In and Out of Parliament : Reminiscences of a Varied Life, 12/ net.

With 12 illustrations.

Fournier (August), Napoleon I., a Biography, 2 vols., 21/ net.

Translated by Annie Elizabeth Adams, with an introduction by H. A. L. Fisher.

Griffith (W. L.), The Dominion of Canada, 7/6 net.

Deals with the social and political condition of Canada, its trade and its natural resources, and such information as is desired by intending emigrants, or a mere visitor to the country. The volume contains 26 illustrations, and forms part of the "All Red" Series.

Johnston (Sir Archibald) of Wariston, Diary of, 1632-1639.

Edited from the original manuscript, with notes and introduction, by George Morison Paul. One of the Scottish History Society Publications.

Mahaffy (John Pentland), The Silver Age of the Greek World, 6/ net.

One of the University of Chicago Publications, intended to replace the author's 'Greek World under Roman Sway,' now out of print, in a maturer form with much new matter added.

Morison (Sir Theodore), The Economic Transition in India, 5/ net.

Contains the substance of a course of lectures delivered at the London School of Economics and Political Science in 1910.

Polidori (Dr. John William), 1816, The Diary of, relating to Byron, Shelley, &c., 4/6 net.

Edited and elucidated by William Michael Rossetti.

Troutbeck (Henry), The Founders of Westminster Abbey, 2/ net.

With a frontispiece from a water-colour drawing by Lucy Macdonald, and 6 illustrations from water-colour drawings by the author.

Twining (Agatha G.), Our Kings and Westminster Abbey, 2/6 net.

With 33 illustrations. A revised and abridged edition of 'A Child's History of Westminster Abbey.'

Ward (Richard), The Life of the Learned and Pious Dr. Henry More, to which are Annexed Divers Philosophical Poems and Hymns, 5/ net.

Edited with introduction and notes by M. P. Howard.

Geography and Travel.

Atkinson (Sophie), An Artist in Corfu, 18/ net.

With 14 illustrations in colour and a map.

Collier (Price), The West in the East from an American Point of View, 7/6 net.

Claiming that civilization is not a failure, but that the west, while holding to its high ideals must recognize charitably its ignorance and limitations.

Fea (Allan), Nooks and Corners of Old England, 5/ net.

New edition, with 100 illustrations from photographs taken by the author.

Fletcher (J. S.), Nooks and Corners of Yorkshire, 2/6 net.

With a map.

Hargrove (Ethel C.), The Charm of Copenhagen, 6/

With 12 illustrations.

Hoyer (M. A.) and Heppel (M. L.), The Welsh Border, its Churches, Castles, and Dyke, 3/6 net.

With 16 illustrations from sketches and photographs by M. A. Hoyer. The story of a tramp along King Offa's Dyke.

Maclean (Rev. Donald), Travels in Sunny Lands, An account of the author's recent visit to

Australia, describing what he heard and saw on land and sea, in cities and towns, on the veldt and in the bush. The book contains a coloured frontispiece and 24 other illustrations.

Maurel (André), Little Cities of Italy, 9/ net.

Translated by Helen Gerard, with a preface by Guglielmo Ferrero. The book contains 30 illustrations.

It was crowned by the French Academy, and awarded the Marcelin Guérin prize.

Scott (Sir J. George), Burma : a Handbook of Practical Information, 10/6 net.

Revised edition, with numerous illustrations by the author and others.

Education.

Bonar (James), Disturbing Elements in the Study and Teaching of Political Economy, \$1.

Lectures, delivered in the Johns Hopkins University, Baltimore, April 25-29, 1910, to the Economic Seminary, and concerning the more subtle fallacies which arise from "popular" political philosophy, ignorance of any political philosophy, &c.

MacClintock (Porter Lander), Literature in the Elementary School, 4/ net.

New edition, One of the University of Chicago Publications.

Philology.

Shekel-Hak-Kōdesh of Moses de Leon, Text, 5/ net.

Edited, for the first time, with marginal references, by A. W. Greenup.

School Books.

Blackmore's Lorna Doone, 1/ net.

Edited with introduction and notes by Albert L. Barbour. One of Macmillan's Pocket Classics.

Cross (F. J.), Character and Empire-building, 1/4

With an introduction by the Earl of Meath, and 16 full-page illustrations and 2 maps.

Desmoyers (Louis), Les Mésaventures de Jean-Paul Choppart, 1/6

Edited, with notes, vocabulary and exercises, by C. Fontaine. Part of Heath's Modern Language Series.

Dudley (Cyril R.), Exercises in Practical Geography on the British Isles, 1/

London edition, with full-page maps.

Kellow (H. A.), A Practical Training in English, 2/6

Intended for those who have received the usual elementary grounding in English, and are ready to begin more advanced work, and, touching upon criticism, derivation, and archaic spelling as well as the chronological sequence and particular department of the various authors.

Kinard (James P.), English Grammar for Beginners, 2/6

New edition.

Knowles (Mary H.), and Favard (Berthe des Combes), Perfect French Possible : Some Essential and Adequate Helps to French Pronunciation and Rhythm, 1/6

Aiming at brevity and simplicity, and based upon the statements of acknowledged authorities. Fifth edition.

Livy, Camillus and other Stories from, 1/6

Edited, with introduction, maps, notes, and vocabulary, by G. M. Edwards. In the Pitt Press Series.

Musset (Alfred de), Croisilles ; Pierre et Camille, 1/

In Siepmann's French Series for Rapid Reading.

Perrault (Charles), La Belle au Bois Dormant, Le Chat Botté, et Le Petit Poucet, 1/

Adapted and edited by Albert G. Latham. In Siepmann's Primary French Series.

Riley (Joseph), All the World in Picture and Study : a First Book of Geography, 1/

Starting with the home as the centre of a child's interests, the book has been written from the standpoint of Nature Study. With 83 illustrations and maps.

Ross (Estelle), From Conquest to Charter (1066-1215), 1/6

Illustrated by Evelyn Paul.

Séguir (Madame de), Le Bon Petit Henri, 4d.

Edited, with vocabulary, notes, and questionnaire, by F. W. M. Draper.

Shakespeare : Hamlet, 1/6

Edited by A. W. Verity. Forms part of the Pitt Press Shakespeare for Schools.

Siepmann (Otto) and Vernols (L. F.), Preliminary French Lessons, 1/

Tappan (E. M.), The Story of the Greek People, 1/6

Intended to present a simple outline of the chief events in the history of ancient Greece, and to picture the customs of the people, their manner of living, and thinking and feeling.

Science.

Burnside (W.), Theory of Groups of Finite Order, 15/ net.

Translated by W. J. Greenstreet.

Kennedy (R. A.), Space and Spirit : a Commentary upon the Work of Sir Oliver Lodge, entitled 'Life and Matter,' 1/6 net.

Second edition.

Lombroso's Criminal Man, 6/ net.

Briefly summarized by his daughter Gina Lombroso Ferrero, with an introduction by Cesare Lombroso. The book contains 39 illustrations.

Punnett (R. C.), Mendelism, 5/ net.

Third edition, with many illustrations, some of which are in colour.

Sinclair (Upton), The Fasting Cure, 2/6 net.

United States National Museum : 1826. The Recent and Fossil Mollusks of the Genus Bittium from the West Coast of America, by Paul Bartsch ; and Descriptions of New Hymenoptera, 11, by J. C. Crawford.

Fiction.

Applin (Arthur), The Clatter of the Clogs, 6/

The heroine is a factory girl who wins love and fortune.

Bosher (Kate Langley), Miss Gibbie Gault, 6/

An American story.

Cox (Sir Edmund C.), The Achievements of John Carruthers, 6/

Twelve stories of crime in India, told by the Assistant Superintendent of Police who appeared in the author's 'John Carruthers, Indian Policeman.'

Fuller (Anna), Later Pratt Portraits, sketched in a New England Suburb, 6/

A continuation of the series of sketches of New England life and character which the author published some years since under the title of 'Pratt Portraits.'

Hansbrough (Henry Clay), The Second Amendment, \$1.40

A novel of American political life, portraying political conditions as the author thinks they may be a dozen years from now. There is a love story running through its pages and a mystery.

Hume (Fergus), The Pink Shop, 6/

The Pink Shop, a "beauty factory," is the scene of murder and mystery.

Keller (Gottfried), Seven Legends, 2/6 net.

Translated from the 56th German edition by Martin Wyness, with an introduction by Richard M. Meyer. Forms No. 1 of the Caviare Series.

Lady Betty Across the Water, 1/ net.

Edited by C. N. and A. M. Williamson. New edition.

Marsh (Richard), Twin Sisters, 6/

Deals with the adventures of two sisters, so much alike as to be mistaken for each other, and a lady's maid, a clever adventuress who can "make up" sufficiently well to pass for either of the twins.

Martens (Mary E.), A Woman of Small Account, 6/

Deals with South African life and its social aspects.

Ross (M. A.), The Pawns of Fate, 6/

A love story developing from a strange entanglement, which raises questions concerning the moral basis of society.

Scott (Dixon), Zarya, 6/

A tale of the Caucasus.

Thackeray, Centenary Biographical Edition: Ballads, The Rose and the Ring: and Christmas Books, 6/ net each.

Thackeray: The Book of Snobs and The Yellow plush Correspondence, &c. 10/6 net each.

Parts of the Harry Furniss Centenary Edition. Wister (Owen), Members of the Family, 6/ As in 'The Virginian' the author has gone to the wild, free life of the Western States of America for his scenes and characters.

General Literature.

Annual Register: a Review of Public Events at Home and Abroad for the year 1910. New Series, 18/

Bryant (Sara Cone), Stories to Tell to Children, 2/6 net.

Contains 54 tales, and some suggestions for the story-teller which were not mentioned in the author's previous work, 'How to Tell Stories to Children,' because they were not considered fundamental points of method.

Burdett's Hospitals and Charities, 1911: the Year-Book of Philanthropy and Hospital Annual, 10/6 net.

Butterfield (Kenyon L.), Chapters in Rural Progress, 4/ net.

New edition. One of the University of Chicago Publications.

Carlew (Loris), Alice in Plunderland, a tale of the Land Taxes, 1/ net.

Illustrated by Linton Jehne.

George (David Lloyd), People's Insurance.

From the Chancellor of the Exchequer's speech in the House on May 4.

Goold (Marshall N.), The Sea-Sphinx, 5/ net.

Griffith (Reginald Harvey), Sir Perceval of Galles: a Study of the Sources of the Legend, 5/ net.

One of the University of Chicago Publications.

Home University Library: The Animal World, by F. W. Gamble, with introduction by Sir Oliver Lodge; Crime and Insanity, by Charles Mercier; Liberalism, by L. T. Hobhouse; Mediæval Europe, by H. C. Davis; and The Science of Wealth, by J. A. Hobson, 1/ net each.

Humphreys (John H.), Proportional Representation: a Study in Methods of Election, 5/ net.

With an introduction by Lord Courtney of Penwith.

Macrory (the late Edmund), Notes on the Temple Organ, 2/6 net.

Third edition, by M. Muir Mackenzie.

Maitland (Frederic William), Collected Papers of, 3 vols., 30/ net.

Edited by H. A. L. Fisher.

Nationalities and Subject Races: Report of Conference held in Caxton Hall, Westminster, June 28-30, 1910, 3/6 net.

Nield (Jonathan), A Guide to the Best Historical Novels and Tales, 8/ net.

Fourth edition, revised, with a supplement. Nietzsche (Friedrich), I. The Case of Wagner, II. Nietzsche contra Wagner, III. Selected Aphorisms, 1/ net.

Translated by Anthony M. Ludovici. Second edition.

Petrarch's Letters to Classical Authors, 4/ net.

Translated from the Latin, with a commentary, by Mario Emilio Cosenza. One of the University of Chicago Publications.

Pritchard (W. Charles), Papua: a Handbook to its History, Inhabitants, Physical Features, and Resources, &c., 1/6

Compiled from Government Records and other sources. With an appendix on the health conditions of Papua by R. Fleming Jones.

Scott (William Robert), The Constitution and Finance of English, Scottish, and Irish Joint-Stock Companies to 1720: Vol. III. Water Supply, Postal, Street Lighting, Manufacturing, Banking, Finance, and Insurance Companies; also Statements relating to the Crown Finances, 18/ net.

Webb (Sidney), Grants in Aid: a Criticism and a Proposal, 5/ net.

General Literature.

La Licorne: Recueil de Littérature et D'Art, Vol. I., No. 1, 1l. 1s. for six numbers.

Dirigé, par Marc S. Villiers, Arthur H. Cornette and Jean Hostie.

Issue limited to the number of subscribers.

* * All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

FOLLOWING his edition of 'The Acharnians,' Dr. W. J. M. Starkie has prepared a similar edition of 'The Clouds' of Aristophanes, which will shortly be published in Messrs. Macmillan's Classical Library. It will contain an introduction, an English prose translation, critical notes, and commentary.

THE same firm will publish early this month 'The Legacy: a Story of a Woman,' by Mrs. Mary S. Watts, author of 'Nathan Burke.' Like the earlier novel it is a story of Ohio, but the scenes are laid in the present day.

MESSRS. PUTNAM are publishing 'In the Time of the Pharaohs,' by Prof. A. Moret, translated by Madame Moret, with sixteen illustrations.

IN *The Expository Times* for June Prof. A. R. S. Kennedy describes in some detail an important and hitherto unknown Hebrew manuscript of the Old Testament, which is in the Advocates' Library, and has recently been examined by him at the request of Mr. Dickson, Keeper of the Library. Dr. Kennedy suggests that it should be known as the 'Codex Edinburgensis,' and adds "It may safely be said that for size, condition, and calligraphy it has few rivals among similar MSS. in any library in the world." He assigns its date of origin provisionally to the thirteenth century. If this conclusion is sound, the Faculty of Advocates possesses one of the oldest existing MSS. of the complete Hebrew Bible.

MESSRS. KEGAN PAUL will publish next week, a small volume from the pen of Mr. John Murray Gibbon, entitled 'Scots in Canada,' with twelve illustrations in colour by Mr. Cyrus Cuneo and Mr. C. M. Sheldon. We learn that there are close upon a million Scots in the Dominion to-day. Within another twenty years, Mr. Gibbon predicts, that number will at least be doubled.

THE Benchers of the Middle Temple gave a pleasant dinner last Friday evening in the fine Hall of the Society to celebrate Thackeray's connexion with the law. Sir Robert Finlay, who presided, introduced the subject, and Lord Mersey, Mr. Justice Darling, and Mr. Birrell added characteristic touches of humour to the occasion. Thackeray was no lawyer, and clearly

did not like legal work. But fortunately eminence in law and letters alike is not impossible, and we hope it will be long before success in the former involves that distaste for imaginative literature which a late eminent judge once declared to be the result of his absorbing specialism.

MR. C. E. ROCHE writes:—

"The reviewer of Mr. Alexander Warrack's 'Scot's Dialect Dictionary' states that the origin of "bools" is "boulet." "Boule," it should be. To quote but one authority, Littré: 'Petites boules de pierre ou de marbre.' This, under *bille*."

THE appointment of Mr. M. J. Rendall as Head Master of Winchester College was not unexpected, but is noteworthy as representing more than one change from the usual limits of selection. "The Warden and Fellows," says *The Cambridge Review* of this week, "have done well to break with tradition and appoint a lay Head Master from the existing staff who is not a Wykehamist, nor even an Oxford man."

LAST December the Council of the Library Association of the United Kingdom appointed an International Committee to consider and report on matters arising from the 1910 International Conference. to arrange participation in future conferences, to act as a Welcome Committee to foreign librarians, and to encourage intercourse between British and foreign librarians. Mr. L. C. Wharton has been appointed Secretary to this Committee for the present, and communications should be sent to him at 24, Bloomsbury Square, London, W.C.

THE long-discussed public monument to Verlaine was inaugurated on Sunday last in the Luxembourg Gardens, Paris. The bust is the work of M. Niederhausen-Rodo, and the pedestal presents three young female figures symbolical of three of the poet's works. A large number of public men and friends of Verlaine assisted at the ceremony.

THERE has been some confusion in the press on the subject of the Karl Baedeker whose death we recently recorded. He was an elder brother of Dr. Fritz Baedeker, the present head of the firm which signs "Karl Baedeker," and he retired from the business as far back as 1878 on grounds of ill-health. He has further been confused with his cousin Herr Dietrich Baedeker, who is living at Essen, and was some time since the publisher of the *Rhein-Westfalen Zeitung*.

A NEW volume of short stories by Sudermann, entitled 'The Indian Lily,' will shortly appear with Messrs. Cotta in Berlin.

AMONG recent Parliamentary Papers of some interest, we note: Statistical Report of the University of Aberdeen, 1909-10 (post free 2½d.); Educational Administrative Provisions (post free 1½d.); Agreement for the Suppression of Obscene Publications (post free 1½d.); and Census of Ireland, Preliminary Report for 1911 (post free 3½d.).

SCIENCE

OUR LIBRARY TABLE.

The Practical Flower Garden. By Helena Rutherford Ely. (Macmillan & Co.)—One more is added to the company of garden books by the publication of this trans-Atlantic volume of gossip on flowers and shrubs. It is not specially useful to English gardeners, as the conditions in America are widely different from those which prevail here. But it is interesting to note this very distinction. For example, "pale lavender German iris" will hardly be found in bloom with Darwin tulips on May 15th, only the flags gracing a May garden in this country. Mrs. Ely seems to prefer the segregation of her colours, as she writes of the white border, the pink, the blue border, and others. We do not know that this scheme is quite to our taste. Less-favoured gardeners will read with envy of "a hedge of pink and white althæas which has now grown so high that the garden is quite hidden from view." We do not remember Isabella as a "large double pink tulip almost as large as a peony." Our Isabella is a single York and Lancaster late-flowering Cottage. Cotton-seed meal is, we fancy, unknown in this country as a top-dressing for lawns. The garden of which the author writes is in the hill country of New Jersey, and in winter has a temperature ranging between 40 degrees above and 20 degrees below zero. We note an excellent chapter on raising flowers from seed, also one on fertilizers, a paper on tomatoes which will not, however, teach gardeners in the old world much that they do not already know, and a spacious chapter on the wild garden, which nowadays every self-respecting pleasure must include. Mrs. Ely confesses to her inexperience in this particular province, but nevertheless her notes are worth considering, even though they deal with another country and another climate. The book is full of illustrations, several of which are in colour.

The Glacial Geology of Norfolk and Suffolk. By F. W. Harmer. (Jarrold & Sons.)—For more than half a century Mr. Harmer has devoted much of his leisure to the systematic study of the glacial history of East Anglia: it is, therefore, a subject on which he has a right to speak with no little authority. To various scientific societies he has, from time to time, contributed papers descriptive of his investigations, and in the little work under notice he has reprinted from the *Transactions* of the Norfolk and Norwich Naturalists' Society an excellent essay, which gives in readable form a summary of his general results. Mr. Harmer believes that in the early part of the glacial period a huge mass of ice from Scandinavia, filling the North Sea basin, reached the East Anglian area and left its fundamental moraine in the form of the brick-earths, with erratics of igneous rocks, worked near Norwich and elsewhere. The contorted drift forming the great ridge well seen near Cromer is regarded as the terminal moraine of this old glacier, formed probably at a time of its retreat. Both the contorted and uncon-torted deposits are included by the author under the general term of North Sea Drift. It seems that, at a much later period, an

inland sheet of ice, called by the writer the Great Eastern Glacier, came from the north and north-west, and left an enormous ground moraine, containing much Cretaceous and Jurassic detritus, well known as the Chalky Boulder Clay. In discussing the origin of glacial deposits there is generally room for much diversity of opinion, and no doubt many geologists will be disposed to differ from Mr. Harmer in some of his conclusions. But, for all that, the tourist with geological tastes who happens to visit Norfolk and Suffolk will find in this essay a most convenient and suggestive guide to the study of the local relics of the Great Ice Age.

A Handbook of the Tsetse-Flies (Genus Glossina). By Ernest Edward Austen. (British Museum.)—The importance of entomological research is adequately shown by this, one of the latest of the British Museum publications. It brings our knowledge of these dangerous insects up to date, and supplements, or rather replaces the 'Monograph of the Tsetse-Flies,' written by the same author, published by the Trustees of the British Museum, and reviewed in these pages in March, 1904.

We learn from Mr. Austen's Introduction that until quite lately it was considered by those best qualified to form an opinion that sleeping sickness is disseminated solely by the species of Tsetse-fly known as *Glossina palpalis*. The recent occurrence of the disease in the Nyasaland Protectorate and the valley of the Luangwa River, North-Eastern Rhodesia, in both of which *G. palpalis* is believed to be non-existent, has caused grave suspicion concerning two other species. Our knowledge of the number of species of *Glossina* has been considerably increased since the seven only enumerated in the previous monograph, and all are fully described with their known bionomics in the present publication, while some amount of revision in nomenclature has been effected. The illustrations are excellent and drawn by Mr. Terzi, while a coloured map of Africa is also included showing the distribution of the genus *Glossina*.

Science and the Criminal. By C. Ainsworth Mitchell. (Pitman & Sons.)—This well-illustrated little volume of 237 pages will serve a double purpose. It will teach those whose business it is to acquaint themselves with the methods by which science has helped criminals as well as those by which it has increased their chances of detection. It will also be read by the large class who like stories of criminal trials. The best chapters are those dealing with forged documents, the means of distinguishing inks of various ages, and sympathetic inks. Details are given of many interesting cases of forgery from the time of the Perieus and Dr. Dodd, who were hanged respectively in 1776 and 1777, to Col. Pilcher, who was sentenced for the crime in 1910. The different systems of personal identification are explained, including the anthropometric method of Bertillon and the finger-print system popularized by Sir Francis Galton, and employed by Sir William Herschel in Bengal in 1858, but apparently as old as the Assyrians, who used a manual seal on their clay tablets. The later chapters deal with poisoning trials, the recognition of human blood and human hair, and the adulteration of food.

The Index is insufficient, and the names of Sir Humphry Davy and Dr. W. H. Willcox are incorrectly spelt—blemishes which should not occur in a book demanding scientific accuracy.

The Mechanism of Life. By Dr. Stéphane Leduc. Translated by W. Deane Butcher. (Rebman.)—This little volume is well named, for it contains an exceedingly clear description of what is known of the mechanics of protoplasm; but to know some of the processes of life is not equivalent to a knowledge of what life is, though sometimes the author seems to consider that it amounts to the same thing. Prof. Leduc has devoted much attention to the physico-chemical theory of life, and, as is only natural for those who find in this a sufficient explanation for all the phenomena of living organisms, he does not object to the hypothesis of spontaneous generation. Abiogenesis, however, has been rendered unacceptable to the scientific world, especially in France, by the researches of Pasteur, and Prof. Leduc, finding on the Continent much opposition to his views, has presented them to English readers in collaboration with Dr. Deane Butcher, who is responsible for the translation of his work.

Though the reader may not agree with all the conclusions of the author, the book is useful (and would have been more so had it possessed an index) because it brings together the data upon which the physico-chemical theory of life has been founded. It deals with the chemistry of crystalloid and colloidal solutions and the laws of diffusion and osmosis, and shows how the contact of two colloidal solutions, or of two liquids separated by an osmotic membrane, forms the essence of the physical phenomena of life. Incidentally, the author describes and illustrates the marvellous forms, built up on the same principles as living matter, into which these physical forces are able to mould mineral constituents under laboratory conditions. But though the processes are similar, the results are only superficially the same. Dr. Haldane, in his opening address to the section of Physiology at the meeting of the British Association in Dublin in 1908, expressed the more general opinion in this country when he said:—

"The physico-chemical theory of life becomes unsatisfactory as soon as we pass beyond the most superficial details of physiological activity; and it breaks down completely when applied to fundamental physiological problems, such as that of reproduction.....In physiology and biology generally, we are dealing with phenomena which, so far as our present knowledge goes, not only differ in complexity, but differ in kind, from physical and chemical phenomena."

SOCIETIES.

ROYAL.—May 25.—Sir Archibald Geikie, President, in the chair.—Papers were read as follows: 'Experiments on the Compression of Liquids at High Pressures,' by the Hon. C. A. Parsons and Mr. S. S. Cook;—'Energy Transformations of X-rays,' by Prof. W. H. Bragg and Mr. H. L. Porter;—'Spectroscopic Investigations in connexion with the Active Modification of Nitrogen, I. Spectrum of the Afterglow,' by Prof. A. Fowler and the Hon. R. J. Strutt;—'An Optical Method of Measuring Vapour Pressures: Vapour Pressure and Apparent Super-heating of Solid Bromine,' by Mr. C. Cuthbertson and Mrs. M. Cuthbertson;—'The Vacuum Tube Spectra of Mercury,' by Dr. F. Horton;—and 'The Production of Characteristic Röntgen Radiations,' by Mr. R. Whiddington.

SOCIETY OF ANTIQUARIES.—May 25.—Dr. C. H. Head, President, in the chair.—Mr. John Bilson, F.S.A. read a paper on 'The Plan of the First Cathedral Church of Lincoln.' The builder of the church was Bishop Remi, the almoner of Fécamp, who was the first of the Norman ecclesiastics to receive a bishopric in the conquered country. The historical evidence indicates that the church was begun about 1073, and it was finished (except the upper part of its west front)

in 1092. It is evident that any exact knowledge of the architecture of the church must be the more valuable because it was one of the earliest churches built in England by the Norman conquerors, and because it was built quickly within these twenty years. The recovery of its plan is also important for another reason; the knowledge of what already existed must necessarily throw some light on the precise manner in which the present church was built, and so facilitate the solution of the difficult problems which still remain to be unravelled with regard to the history of the works of St. Hugh and his immediate successors.

Before the recent excavations, the only traces of Bishop Remi's church known with certainty were (with the exception of the very important original work at the west end) the fragments of the foundations of the choir and its great apse beneath the choir stalls, and the foundations of the north-west angle of the north transept found in 1903. The excavations kindly authorized by the Dean and Chapter, and carried out at their expense, were begun during the Lincoln meeting of the Royal Archaeological Institute in 1909, under the direction of Mr. W. H. St. John Hope; these resulted in the discovery of the foundations of the east end of the north choir aisle, and of the eastern bays of the wall of the north aisle of the nave. The excavations were continued, under Mr. Bilson's direction, in the earlier months of this year, in the north transept and its eastern aisle, and in the western bays of the nave. The foundations discovered, which were described in detail with the aid of a large-scale plan, have given sufficient fixed points to make it possible to reconstitute the plan of the whole northern half of the church.

The plan consisted of a choir of three bays, terminating eastward in an apse, and flanked by aisles which extended eastward as far as the springing of the great apse; a transept, each arm of which consisted of two bays, one of which was opposite the aisles of the choir and nave, and the other, beyond to the north and south, had an eastern aisle of a single bay; a nave of ten bays in length, with north and south aisles; and two western towers at the ends of the aisles, with the nave extended an additional bay between them. These towers do not appear to have been carried up quite so high as the nave walls, but, below, this western work still remains for the most part, though it has undergone much subsequent alteration. The plan was a remarkably orderly and logical piece of work, and it is due to the fact that it so closely conformed to the Norman "type" that its main lines have been recovered with comparatively little excavation. The internal width of the main spars generally was 28 feet 9 inches; of the choir and aisles about 65 feet; and of the nave and aisles 66 feet 5 inches. The internal length of the transept was 122 feet 9 inches, and the total internal length, from the inside of the west wall, was about 310 feet.

The great apse of the choir was semicircular, divided into five bays, and the plan of the whole eastern part shows marked analogies with the plans of St. Nicolas, Caen, Cerisy, Lessay, and Saint Georges de Boscherville. The choir was three bays in length, as at Montivilliers, instead of the more usual two. The aisles of the choir were finished square externally, and apsidal internally. It is probable that the choir was separated from the aisles by solid walls, as at Cerisy and St. Albans. The plan of the transept is particularly interesting, for it affords the earliest instance of an aisled transept in the Norman school. The transept aisle stopped short of the end of the transept itself. Each arm of the transept had the characteristically Norman gallery, which here, as at Jumièges and Bayeux, may have extended over the whole area up to the crossing piers on either side. The transept plan shows close analogy with that of Saint Étienne, Caen, and the similarities in small details here and in the nave are so marked as to suggest that Bishop Remi's master-of-the-works must have been employed on the Conqueror's church before he began his work at Lincoln. Some fragments of reused shafts which evidently belonged to the nave piers, and some details of setting-out, seem to indicate that the nave closely followed the type of Saint Étienne, Caen. The external width of the nave itself is indicated on the existing west front by the line of the southern jamb of the northern great lateral recess, and that of the northern jamb of the corresponding southern recess, and the heights of the smaller recesses at either end of this front indicate those of the nave arcades.

The plan of Bishop Remi's church, as worked out from the remains which have been found, is an admirable illustration of the logical precision, clearly defined expression of structure, and feeling

for monumental form which characterizes the best work of the Norman school. It conforms very closely to the "type" of the contemporary works of the Continental school of Normandy, much more closely than do most of the great churches built in England after the Norman Conquest. It shows some indications, though as yet but slight, of the great expansion of scale which is illustrated in the nearly contemporary church of Winchester. And its western work stands almost alone as a magnificently original piece of monumental building, a speaking witness of the powerful architectural expression of a masterful race.

In the discussion which followed the paper, the President expressed the Society's appreciation of the action of the Dean and Chapter of Lincoln in allowing the excavations to be undertaken, and in so generously defraying the cost.

LINNEAN.—May 24.—Annual Meeting.—Dr. D. H. Scott, President, in the chair.—Mr. William Neilson Jones was proposed as a Fellow.—The Treasurer then laid his annual cash statement before the meeting, which, after observations by Mr. Alfred W. Oke, Sir Frank Crisp, Lieut.-Col. Prain, and Mr. John Hopkinson, was received and adopted.—The General Secretary read his Report, showing that 15 Fellows, 2 Associates, and 2 Foreign Members had died, or their deaths been ascertained, since the last anniversary, and that 9 Fellows had withdrawn, whilst 25 Fellows, all of whom had qualified, 2 Associates, and 7 Foreign Members had been elected.—The Librarian's Report showed the total additions to the Library were 661 volumes and 430 separate parts, whilst 834 volumes had been bound or repaired.

The following were elected to form the Council: Prof. V. H. Blackman, Henry Bury, Sir Frank Crisp, Prof. Arthur Dendy, Prof. J. Stanley Gardiner, E. S. Goodrich, Henry Groves, Prof. W. A. Herdman, Arthur W. Hill, Dr. B. Daydon Jackson, Horace W. Monckton, Prof. Francis W. Oliver, Prof. E. B. Poulton, Dr. A. B. Rendle, Dr. Walter George Ridewood, Miss Edith R. Saunders, Dr. Dukinfield H. Scott, Dr. Otto Stapf, Miss Ethel N. Thomas, and Dr. A. Smith Woodward.—The Officers were elected as follows: President, Dr. Dukinfield Henry Scott; Treasurer, Horace W. Monckton; Secretaries, Dr. B. Daydon Jackson, Prof. A. Dendy, and Dr. Otto Stapf.

ZOOLOGICAL.—May 23.—Dr. A. Smith Woodward, V.P., in the chair.—Prof. Arthur Dendy read a paper by Dr. J. Stuart Thomson on the 'Aleyonaria of the Cape of Good Hope and Natal.'—A paper, entitled 'Tooth-Germs in the Wallaby (*Macropus billardieri*),' was presented by Dr. A. Hopewell Smith and Dr. H. W. Maretts Tims.—The Rev. A. Miles Moss gave a short account of his memoir on the Sphingidae of Peru.—Prof. J. P. Hill communicated a paper by Dr. R. Broom on the 'Structure of the Skull in Cynodont Reptiles.'—Dr. C. W. Andrews read a paper on 'A New Species of Dimotherium from British East Africa.'

ROYAL ANTHROPOLOGICAL INSTITUTE.—May 23.—Dr. A. C. Haddon in the chair.—A paper was read on 'The Classification of the Prehistoric Remains of East Essex,' by Mr. S. Hazzledine Warren; also a report on a prehistoric skeleton by Dr. A. Keith.

The district of Eastern Essex is formed of a plateau deeply trenched by river valleys. On the plateau, and also at lower levels, are numerous palaeolithic deposits. The present paper deals in detail with the later prehistoric remains only. The river valleys were cut at a time when the land stood higher, relatively to the sea, than to-day. As submergence set in, the lower reaches of the valleys were invaded by the sea, and became partially silted up with tidal clay. Upon the former dry land surface, now buried beneath the tidal clay, large numbers of prehistoric remains have been found. These include polished axe-heads, knives, arrow-points, and other flint implements. Among the pottery some remains of the "drinking-cup," or "beaker," have been found, and it is to this archaeological stage that the buried prehistoric surface is referred. Beneath this surface deposits of rain-wash are found which yield an earlier series of prehistoric remains. These are post-palaeolithic, as they include polished stone axes, barbed arrow-points, and pottery. The question of the position which these remains should occupy in the prehistoric succession was discussed. The advantage of using a sequence date scale rather

than a succession of epochs with indefinite and overlapping boundaries was insisted upon.

The skeleton described by Dr. Keith belonged to the horizon of the buried surface. It was remarkably perfect, and was referred to a woman of about 25 to 30 years of age. Although of small cranial capacity, it was of fairly high type. The skull inclined to the round-headed form, the index being 77.8; the stature was 5 ft. 4 in., or slightly less; the limb bones were slender, and the hands and feet small.

It was buried in the contracted position. The body had been swathed in the tough roots of the sand grass, while within the cavity of the body a considerable quantity of the seeds of the blackberry and dog-rose were found. These were undoubtedly the remains of food.

BRITISH NUMISMATIC.—May 24.—Mr. Carlyon-Britton, President, in the chair.—The Leicester-shire Architectural and Archaeological Society and Messrs. Frank B. Burton, Cumberland Clark, A. L. Cooke, and Eugene G. Courteau were elected to membership. Mr. Henry Symonds read a paper entitled 'The Coinage of Mary Tudor; illustrated from the Public Records,' which, as its title suggested, was the outcome of personal research of the rolls and manuscripts of the period preserved at the Public Record Office and elsewhere. The author's studies had brought to light many documents new to our knowledge of the reign, and others which had been but partially abstracted; for example, an indenture upon which the proclamation of August 20, 1553 was based, had been omitted from the Close Rolls, and so had hitherto remained unpublished, yet it formed the basis of Mary's English coinage. From the new light thus brought to bear upon his subject, Mr. Symonds was able to clear away many uncertain problems concerning the issue, quality, and quantity of her money; and in particular, to raise the suggestion that neither the angel, angelet, nor groat of Philip and Mary was issued prior to the commission of 1557. The monograph similarly treated the coinage for Ireland during the period, and the documentary evidence pointed to the inference that the money was actually coined in London for export to Dublin. In illustration of his paper Mr. Symonds showed Irish shillings of 1553 weighing 84½ grains and of 1555 136½ grains and the groat of 1557, 47 grains.

At the instance of Major Freer there was an exhibition of war medals and orders of which he read descriptive notes. Mr. S. M. Spink showed the remarkable and unique series of orders and medals awarded to Wellington's colleague Sir George Murray including his Peninsular gold cross with six clasps, the field officer's gold medal for Corunna, Talavera; and eight other orders. Major Freer exhibited Lord Canning's bullion star of the Bath, and series of orders and medals awarded to Sir Henry Harvey, and Sir John Paul Hopkins, of which the Peninsular medal with seven bars was one, and to Admiral Sir Edward Collier.

Mr. A. H. Baldwin submitted an oval plaque in gilt bronze of Charles II. and the medal by P. Van Abeele of the sailing from Scheveningen, from which it was reproduced; also a Harrington farthing reading BRITA., hitherto unknown, and Mr. Henry Garside the pattern shilling of 1875.

Mr. W. Sharp Ogden exhibited the first of a series of medals to English literary and political celebrities, which he intends to issue, in silver and bronze, to the memory of those who have not as yet received any real medallie commemoration from an artistic point of view. The medal was to Shakespeare, and bore his portrait on the obverse, from the painting recently discovered by Mr. Ogden, whilst the reverse designed by the exhibitor, included the profile from the bust at Stratford restored to its original condition as it would appear before its renovation in the middle of the eighteenth century. The work, which was much admired, was that of Mr. F. Bowcher and the medals are issued through Messrs. Spink & Sons.

MEETINGS NEXT WEEK.

- Tues. Royal Institution, 8.—'Charnwood Forest and its Fossil Landscape,' Mr. W. W. Watts.
Wed. Entomological.
Thurs. Royal Institution, 8.—'Practical Progress in Wireless Telegraphy,' Mr. T. Thorne Baker.
— Royal Society, 4.30.—'Experiments on the Restoration of Paralyzed Muscles by means of Nerve Anastomosis,' Dr. H. Kennedy; 'The Morphology of Trypanosoma evansi (Steud),' Col. Sir D. Bruce; 'The Pathogenic Agent in a Case of Human Trypanosomiasis in Nyasaland,' Mr. H. S. Stannus and Dr. W. Yorke; and other papers.
Fri. Royal Institution, 9.—'Applications of Physical Chemistry to the Doctrine of Immunity,' Prof. Savante Arrhenius.
Sat. Royal Institution, 2.—'Types of Greek Women (Lecture II),' Mr. W. L. Courtney.

Science Gossip.

MESSRS. PUTNAM are publishing shortly 'Neglected Factors in Evolution,' by Mr. H. M. Bernard, in which some of the most prominent theories of modern biology are criticized as inadequate to account for all the phenomena of life.

THE third English edition, corresponding to the sixth in German, of 'Theoretical Chemistry,' by Prof. Walter Nernst, will be published shortly by Messrs. Macmillan. The work is translated by Mr. H. T. Tizard, and will contain a large amount of new matter, including a detailed account of the author's new theorem of thermodynamics, and a chapter on radioactivity. The translator has also made some additions to the text, at the suggestion of Prof. Nernst, in order to bring the book up to as late a date as possible.

A REPORT on the Mahaica Leper Asylum, British Guiana, has just been published as a Parliamentary Paper (post free 1s. 3½d.).

THE sun will be vertical over the tropic of Cancer on the 22nd, which is therefore the day of the summer solstice in the northern hemisphere, and the winter in the southern.

THE moon will be full at 9h. 51m. (Greenwich time) on the evening of the 11th inst., and new at 1h. 20m. on the afternoon of the 26th. She will be in apogee on the night of the 11th, and in perigee early in the morning on the 26th.

THE planet Mercury was at greatest western elongation from the sun on the 1st inst., and will be visible before sunrise during this week and next in the western part of the constellation Taurus, approaching the Pleiades. Venus sets later each evening, and moves during the month from Cancer into Leo; she will be in conjunction with the moon on the afternoon of the 29th. Mars is in Pisces, and will rise about midnight at the end of the month; he will be in close conjunction with the moon a little before 1 o'clock on the morning of the 21st. Jupiter is in the western part of Libra, near its boundary with Virgo; he will be due south at 9 o'clock in the evening on the 10th, and at 8 o'clock on the 25th. Saturn is in the eastern part of the constellation Aries, and is now nearly due west of Mercury; he rises earlier each morning, and will be near the moon on that of the 23rd, the conjunction taking place after daylight.

THE star RT Persei was discovered to be a variable of the Algol type by Madame Ceraski, during her examination of plates taken by M. Blazko at the Moscow Observatory, and was provisionally designated var. 155, 1904, Persei. Mr. Raymond Smith Dugan has made a long series of photometric determinations of its magnitude from November 27th, 1905, to January 27th, 1908, at the Princeton University Observatory, the result of which is that the two components are practically equal in size, and that there is a secondary eclipse, the primary occupying 4h. 8m., and the secondary 4h. 16m. The star is in the Bonn Durchmusterung (+46° 740), where its magnitude is registered as 9.5. It appears that this changes from 9.5 to 10.5. The colour of the star is whitish yellow; the whole period amounts to 20h. 23m. 10s.

THE small planet which was discovered photographically by the Rev. J. H. Metcalf at Taunton, Mass., on January 10th, 1910, has been named Leonora.

FIVE new variable stars, of small range of variability, were detected by Miss Cannon whilst examining photographic plates taken at Harvard College Observatory. These will be reckoned as var. 17-21, 1911, in the constellations Cassiopeia, Auriga, Gemini, Ophiuchus, and Sagittarius respectively. A nova was also detected on eleven photographs taken in the summer of 1901, and as it has not been registered on plates taken in the years following, it will be reckoned as var. 22, 1911, Sagittarii. A variable in Perseus was detected by Madame Ceraski, examining plates taken by M. Blazko at the Moscow Observatory, changing its magnitude from about 8½ to 9½; this in a general list is var. 23, 1911, Persei.

PROF. BARNARD obtained visual observations of Halley's Comet at the Yerkes Observatory on the 16th, 23rd, and 25th of April. The magnitude was estimated to be as low as the 15th or 16th, but subject to fluctuations.

THE *Berliner Astronomisches Jahrbuch* for 1911 has appeared, edited, like the preceding, by Prof. Cohn, Director of the Rechen-Institut. The data remain essentially as before—the places of the moon being derived from the tables of Hansen, those of Jupiter and Saturn from Hill's tables, and of the sun and the other large planets from Newcomb's tables. Elements are given of 701 small planets. Only partial eclipses of the sun will occur in 1913, and those (three) not visible in Europe; there will be two total eclipses of the moon.

FINE ARTS

Donatello. By Maud Cruttwell. (Methuen & Co.)

Books about Donatello have been many, and the fact occasions no surprise. If the attempt were made to group the art of Florence during the Quattrocento round the work of a single artist, Donatello would of necessity be the man chosen. His work emerges as a biography, while by contrast those of his contemporaries are the incidents of a development. He liberated sculpture from the dependence on architecture which it acquired and retained throughout mediæval art, and gave to it a freedom to interpret nature akin to that which the impulse of Masaccio gave to painting.

The earlier renaissance in sculpture of the Pisani had been in Florence a transplanted thing with no roots of growth, which, as it withered, became scarcely distinguishable from native work. Donatello in his single achievement bridges over the immense gulf that lies between the rude Gothic simplicity of the followers of Giovanni Pisano, with whose reliefs on the Campanile may be compared the early "prophets" of the Duomo, and the deep questionings of the infinite by Michelangelo, to whose work the reliefs in S. Lorenzo, Donatello's latest commissions, seem almost to serve as prelude. In the interval between the two lay all the

springtime of Florentine art, its first freedom of endeavour—freedom such as the art of the Trecento had never known either in sculpture or painting—the *Lebenslust*, the pure proud purpose, and, following hard after this, the heyday and the riot. Masaccio, Botticelli, Pollaiuolo, the two Lippi—many names occur as types; but there is by contrast in the art of Donatello a certain fullness and richness which causes it to be more fully representative of the whole progress than that of any of his contemporaries. The creator of the two Davids, of the St. George, of the *putti* of the Cantoria and of the pulpit at Prato, of the 'Annunciation' at S. Croce and the Salome relief at Pisa, expresses the art of the Quattrocento in Florence with something of the same completeness with which it was summed up in Venice in the long career of Giovanni Bellini.

By contrast with the serenity, the gravity and perfection of technique of the Venetian, Donatello expresses the greater realism, the deeper intellectuality and wider outlook of Florentine art. In the words of Wölfflin,

"he was a portrayer of men who pursued the characteristic form to the very depths of ugliness, and then again in all calm and purity reproduced the image of a tranquil and bewitching beauty. There are statues of his in which he drains an abnormal individuality to the very dregs, as it were; and side by side with these are figures like the bronze David, where the High Renaissance feeling for beauty already rings out clear and true. He is withal a story-teller of unsurpassable vividness and dramatic force."

Donatello's realism has at the outset a close kinship with the Gothic in its literalness and massive simplicity, but the early journey to Rome with Brunelleschi is recorded by two independent authorities, Vasari and Manetti, and Miss Cruttwell adopts a somewhat unnecessarily sceptical tone in regard to it. Some other references to Vasari have a certain incongruity by reason of the fact that he is the unchallenged source of four-fifths of the biographical information. The first visit to Rome, however, seems to have left but little impress upon Donatello's work. His naturalism and his northern sympathies were temperamental, and these rendered it impossible that the antique should be a dominant influence, but the suggestion of it is found in work produced before the visit which he paid to Rome in the time of Pope Eugenius IV., although after the date of this visit it becomes more marked. Herr Kristeller attributes some of Mantegna's predilection for the antique to the influence of Donatello. The early visit to Rome is almost the only one of the few recorded facts of his life which has been made the subject of controversy. The differences of opinion of recent writers have had to do almost entirely with questions of attribution. If the varying nature of the conclusions reached be any test of the difficulties which have lain in the path of the critic, then the problems of connoisseurship with regard to the attribution of sculpture of the

Quattrocento seem to be as great as those of any other branch of Renaissance art.

As a concrete instance of this extraordinary divergence of opinions we may attempt to summarize the conclusions reached as to the authorship of three reliefs, presumably of this period, which have certain stylistic resemblances to each other, and which have only recently come under the notice of critics. They are the stucco 'Discord' at the Victoria and Albert Museum, the bronze 'Deposition' in the Carmine at Venice, and the bronze 'Flagellation' in the University Museum at Perugia. The list makes no claim to completeness. The numbers after the names denote a change in the critic's opinions.

'Discord': Leonardo (Müller-Walde and Bode, 2), Verrocchio (Bode, 1, and Cruttwell, 1), A. Pollaiuolo (Cruttwell, 2), Bertoldo (Venturi), Francesco di Giorgio (Schubring).

'Deposition': Verrocchio (Bode, 1), Leonardo (Bode, 2), Bertoldo (Venturi), Francesco di Giorgio (Schubring).

'Flagellation': Verrocchio (Venturi, 1, and Bode, 1), Leonardo (Bode, 2), Bertoldo (Venturi, 2), Francesco di Giorgio (Schubring).

The inferences are at any rate suggested that, despite the assiduity of the connoisseur, the weapons in his armoury are too puny sometimes to pierce the veil; that attributions which are not founded upon the *terra firma* of documentary fact are of secondary value as evidence affecting the character of the artist's work; and that the line of proof should be towards, and not from them. A list of works attributed on internal evidence to Donatello would not offer so dramatic a conflict of testimony, but the changes in it would at any rate emphasize the element of uncertainty in such conclusions. And since, although men see the temerity of it, they all tend to be connoisseurs in just such measure as they are capable, they are accustomed to rate the critics one against another in respect of this one faculty of judgment, to the exclusion perhaps of the full consideration of their performances in weaving the threads of biography with the historical setting, or in æsthetical or comparative appreciation.

Miss Cruttwell is one of the most accomplished and facile of the writers of art monographs. The present volume is the fifth of a similar character in which she has displayed her interest in, and knowledge of, the art of the Quattrocento by a detailed study of the work of one of its masters. The facts are skilfully arranged, and the main divisions of the book are admirably distinct. The form of the book, as is usual with the "Classics of Art," is excellent. Thus much may be said about matters which add very much to the attractiveness of the volume, and after all connoisseurship is largely a matter of opinion.

One of the constantly recurring difficulties in the writing of art monographs is the preserving of a critical balance. Without this the master under review,

being constantly present in the thoughts, is almost certain to acquire stature at the expense of his fellows, and so the various studies are like disconnected moods of thought which bear witness one against another. Sincerity, however, is a greater virtue than consistency in matters of connoisseurship, and in certain revisions of judgments expressed in earlier books Miss Cruttwell will doubtless carry with her the opinions of her readers, and the prevailing fashion of writing the history of art in monographs must bear part of the responsibility for the necessity of such revisions.

The antique bronze head of a horse in the Archæological Museum at Florence, which according to Miss Cruttwell in her work on Verrocchio served Donatello as a model for the Gattamelata statue, is no longer thought worthy of mention by her, and the theory that the bronze head at Naples was a free copy from it, made by Verrocchio, is also abandoned, a closer study of the Naples bronze having now convinced the author of its antiquity. It would have been more satisfactory if the closer study had preceded the attempt at a novel attribution of the bronze which Vasari in his second edition — on the authority, presumably, of the Anonimo Gaddiano — stated to be by Donatello, "although so beautiful that many think it antique," and which later scholarship is inclined to regard as of classical workmanship.

The colossal wooden horse in the Palazzo della Ragione at Padua, which Miss Cruttwell in her 'Verrocchio' ascribed to Donatello himself, is now stated to have been a copy made after Donatello's death for processional purposes in the city. The evidence of this had already appeared in the Knackfuss monograph before Miss Cruttwell's former work was published.

In the 'Verrocchio' "the iron helmet surmounted by a dragon" in the Bargello is ascribed "with little hesitation" to Verrocchio, the form and treatment of wings of the dragon being, however, noted as presenting a strong resemblance to that by Donatello in the St. George relief in Or S. Michele. Now the resemblance is found to be so strong that Miss Cruttwell states herself to be "almost tempted to retract her earlier judgment" and to attribute the helmet to Donatello. The fluidity of mind which this fragment of autobiography reveals is so disconcerting that we hope that these temptations may not increase.

Stevenson speaks of the consciousness of having been wrong before as leading a man to the altogether unwarrantable conclusion of being right now, and some of Miss Cruttwell's disputable pronouncements could not be expressed more positively if she had never had occasion to blot a line. The method is not calculated to carry conviction in matters of some degree of uncertainty. Dr. Bode's critical discussion of the various Madonna reliefs which pass under Donatello's name suffers somewhat in its power

to carry conviction from the fact that no "documented" example availed as a starting-point, but we are persuaded that he has far more of the truth of the matter in him in his masterly attempt to arrange reliefs and copies of lost originals in the order in which the conceptions followed each other in the artist's brain than has Miss Cruttwell in her dictum, couched in terms of pontifical certitude, that "only three out of the hundreds that bear his name can be considered genuine."

The marble bust of St. John the Baptist in the Louvre (plate xix.), which Miss Cruttwell states to be technically one of Donatello's masterpieces, is now assigned by the majority of critics to Rossellino, and the arguments for reverting to the former attribution do not seem very cogent.

Yet another instance of adventurous connoisseurship is furnished by the ascription to Donatello of the bronze Bacchanal of *putti* in the Bargello, which now bears the name of Bertoldo, on account, according to Miss Cruttwell, of "the admirable foreshortening and modelling of the nude, the characteristic flatness of the relief, and, above all, the spontaneity and *sfogo* of the figures." The relief was formerly ascribed to Donatello, as was all Florentine sculpture which showed strong marks of his influence. The authorship of Bertoldo was first suggested by Von Tschudi on the basis of his signed work, and this attribution has been accepted by Dr. Bode and Signor Venturi. M. Marcel Reymond is cited by Miss Cruttwell as considering the relief a probable work by Donatello, but the reference to it in 'La Sculpture Florentine' does not support the contention:—

"Nous attribuerons de même à Bertoldo la petite frise de bronze du Bargello qui représente une Bacchanale d'enfants, délicieuse fantaisie qui évoque le souvenir des jeux d'enfants de Donatello."

"Non hanno quei piccoli baccanti l'impeto donatelliano ma sono pieni di festività," says Venturi, and he refers to the resemblance which exists between this work and a bronze relief in the Louvre of the Madonna and Child with angels and *putti*, which must have been designed and executed by the same hand.

The charm of the relief is undeniable, but the execution seems somewhat timid and restrained by comparison with Donatello's authentic work. His *putti* are usually clothed in a manner peculiar to him; these are nude; and the preference for the nude is a noteworthy feature in Bertoldo's "documented" work. The classicism of feeling discernible in the relief is what would naturally be looked for in the later work of one who, after being Donatello's assistant, became the Keeper of the Medici Art Collections and the head of the Academy which Lorenzo founded in the gardens of S. Marco. It was there that the youthful Leonardo copied sculpture, and there Michelangelo studied under Bertoldo, whose work, as identified by Dr. Bode and other German critics, renders it possible to discern something

of the first tutelary influences of Donatello's great successor.

Donatello's reliefs for the pulpits of S. Lorenzo have been called the second school of Michelangelo, and these reliefs, which were Donatello's last work, were, according to Vasari, left unfinished by him, and completed by Bertoldo.

Miss Cruttwell also regards the bronze relief of the Crucifixion in the Borgello as superior to any of Bertoldo's achievement in design and modelling, and therefore to be assigned to Donatello. The figure which is mentioned in support of this contention—that of the man on a ladder who is hammering nails into the feet of the thief—is designed and executed with anatomical precision and dramatic power, but it is not without parallels in the relief of the Combat of Soldiers, which, according to Vasari, Bertoldo made after the manner of Donatello.

THE NEW ENGLISH ART CLUB.

THE most entirely successful pictures in the present Exhibition at Suffolk Street are not among the surprises of the show. Mr. David Muirhead's sombre 'Church in the Fens' (166) and Mr. Ambrose McEvoy's superbly accomplished 'Anais' (158) do not differ in kind from work frequently seen from these painters of recent years, though rarely has either reached such a pitch of assured, yet restrained mastery. They are fine examples of sincere and capable painting which would not disgrace any period. Mr. Wilson Steer, in his landscape 'The Valley of the Severn (storm passing away)' (171) nearly regains the lyrical inspiration which in his famous exhibition at the Goupil Gallery compelled admiration for an art somewhat loose-knit and lacking in technical constructiveness. These are, however, almost the only pictures which give us a momentary illusion that art in these circles is, as it were, marking time, that the New English Art Club is to-day as it was yesterday. In most of the regular exhibitions we are conscious of waning faith—of tricks of execution repeated still, but not with conviction, as of yore. The somewhat half-hearted manner in which the principles of impressionism were utilized by this group of painters (who, instead of pushing their science home with the logic of their French confrères, were prone to trust to a sentimental lyricism for the final shaping of their designs) does not make for virile art, except precariously and under stress of excitement. The constructive principle of the colour scheme of a typical new English Art Club painter, and the constructive principle which underlay his massing of forms had, as a rule, little in common. The first was naturalistic, and suggested the passive receptive attitude towards nature of Monet and his school; the second more arbitrary, for the Englishmen have never, unfortunately, been confident in the sufficiency of this naturalistic observation without a garniture of rhetorical flourish and conventional picture-making which sometimes pressed hardly upon the groundwork of precise colour-notation which it had to finish and make acceptable. Among Mr. Steer's landscapes the earlier works were less moulded by taste and pictorial artifice than the later, but they were closer renderings

of natural effect, and more thoroughly studied, and, while in his figure painting we do not see a like increase of power in bold and arbitrary planning of masses, we do see a similar blunting of the nice sense of values which his earlier works possessed. Thus in 'The End of the Chapter' (167) we are impressed rather by the copiousness than the subtlety of the rendering of the planes of the picture, which, in fluent but miscellaneous representation recalls to a surprising degree the work of Sir John Millais, in the period when he produced the popular full-page illustrations for Christmas numbers of periodicals. Like Millais in that phase of his development, Mr. Steer is redeemed by the human refinement which accompanies his pictorial vulgarity. The face of the girl is subtly drawn, though this care for fine observation is overweighted with irrelevant and unrelated accessories set forth with pitiless diffuseness. It is like one significant gesture on a stage occupied with real racehorses or elaborate mechanical devices. The want of economy in this work is very apparent if we compare it either with Mr. Sickert's picture, 'The Ebony Bed' (195), in which the human expressiveness of the sitter is limited by the severely logical presentment of the mystery of gloom, or on the other hand, with Mr. Lamb's two pictures, 'Mort d'une Paysanne' (198) and 'Lamentation' (209), in which the essentials of drama are starkly set down with no adornment of atmosphere or complexity of illumination. To the pictures of both these artists the definite intention and the loyal acceptance of the limitations of a convention give distinction. They have the vitality of a force which has not yet found complete outlet, and are among the works (in the present exhibition unusually few) which show the art of to-morrow in the making.

SALES.

THE following pictures, the property of the late Charles Butler, were sold at Messrs. Christie's on May 25th and 26th. Ambrogio Borgognone, The Virgin in Glory, supported by Angels, the Virgin in white dress flowered with gold, 325*l*. A. Bronzino, Portrait of a Lady, in black and red dress and rich cap, holding her gloves in her right hand, 399*l*. Vincenzo Catena, Christ and the Woman of Samaria, 210*l*. Giacomo Francia, The Madonna and Child and St. John, the Madonna, in red dress and blue robe, holds the Infant Saviour, who sits on a cushion on a ledge before her; behind her on the right is the infant St. John, 210*l*. The Florentine School, The Judgment of Paris, on the left Paris is seated with the three goddesses standing in front of him, behind him are animals, 346*l*. Nicola di Liberatore, The Almighty with Four Angels, 283*l*. Filippino Lippi, The Story of Cupid and Psyche, on the right, before a Florentine building, Psyche, accompanied by her two sisters, is wooed by numerous suitors, 525*l*. The School of Filippo Lippi, The Madonna adoring the Infant Saviour, 233*l*. Andrea Mantegna, The Madonna and Child, half figure of the Madonna, in red dress and white linen head-dress, standing behind a wall, holding the Infant Saviour, 1,207*l*. Matteo di Giovanni, The Story of Camilla, the scene probably represents an incident in the life of Camilla, daughter of Metabus, 336*l*. The Story of Camilla, another incident in the same life, 441*l*. The Story of Camilla, represents a group of figures on the right before a camp, 504*l*. The Madonna and Child, small half-length figure of the Madonna in brown dress and dark cloak, seated, holding the child on her lap, 315*l*. Milanese School, The Madonna and Child, enthroned with Saints, in the centre the Madonna, in red dress and green cloak, enthroned, on a marble terrace, holding the Infant Saviour on her knee, 336*l*. Marco Palmezzano, The Holy Family, with St. Catherine and St. John, the Madonna, in red dress and blue cloak, with white head-dress, adores the Infant Saviour, who is seated on a ledge before her, 210*l*.

Pesellino, Solomon and the Queen of Sheba, before the entrance to a palace, King Solomon, followed by his courtiers, is welcoming the Queen of Sheba, 336*l*. Baldassare Peruzzi, The Madonna and Child, half-length figure of the Madonna, in dark brown dress with red sleeves and blue robe, beneath a portico, 262*l*. Vittore Pisano, called Pisanello, A Battle Scene, on the Banks of a River, in the centre of the picture is a river, on either bank of which are encamped two hostile armies, 378*l*. Raffaele, Madonna di Casa Colonna, three-quarter length figure of the Virgin, seated facing, looking down at the Infant Christ on her lap, 210*l*. Cosimo Rosselli, St. Catherine of Siena delivering the Rule to the Sisters of the Second Order of Saint Dominic, 1,312*l*. St. Nicholas of Bari and Saints, in the centre the Bishop is seated, on the right stand St. Catherine and St. Lucia, and on the left St. Margaret and St. Agatha, 1,155*l*. The Madonna and Child, small three-quarter figure of the Madonna, in red dress and green cloak, with the child seated on a cushion on her lap, 651*l*. Andrea del Sarto, Portrait of the Artist's Wife, as 'The Magdalen,' life-size three-quarter length figure, in crimson dress with lilac sleeves and white bodice, 945*l*. The School of Zanobi Strozzi, The Miracle of St. Nicholas, this probably is intended to represent the miracle said to have been performed by St. Nicholas at Myra during a famine, 273*l*. Tintoretto, Moses Striking the Rock, in the centre stands Moses, clad in crimson dress and long cloak, striking with his rod the rock on the right, 787*l*. The Resurrection, in the centre the figure of Christ is seen rising from the tomb, pointing upwards with His right hand, and holding a banner in His left, 462*l*. Titian, Tarquin and Lucretia, Tarquin stands with uplifted dagger over Lucretia, whose right arm he grasps, 2,730*l*. Paolo Uccello, Battle Scenes (a pair), incidents in the campaign between the Florentines and the Milanese, 2,100*l*. Palma Vecchio, The Holy Family, with St. Catherine, the Madonna, in red dress and blue robe, holding the Infant Saviour in her arms, 294*l*. Bonifazio Veneziano, The Holy Family, with St. Elizabeth, St. John, and the Shepherds, in the centre the Madonna, in red dress, blue cloak, and white head-dress, is seated, holding the Infant Saviour on her knee, and resting her left hand on the shoulder of St. Elizabeth, 1,155*l*. The Adoration of the Shepherds, the Virgin, in red dress, blue cloak, and white head-dress, seated in the centre before a building, with the Infant Saviour on her lap, 651*l*. The Holy Family, with Saints, full-length figures, the Virgin, in pink dress, green cloak, and white head-dress, 892*l*. Andrea del Verrocchio, The Madonna and Child, small half figure of the Madonna, in blue robe lined with green over a flowered gold dress, and blue head-dress with a muslin veil, holding the Child, 6,300*l*. St. Jerome, St. Joseph, and a Donor, 441*l*. Andrea Mariotto di Viterbo, The Madonna and Child enthroned with Saints, on a carved throne is seated the Virgin, in red dress and blue cloak lined with green, holding the Infant Saviour, who stands on her right knee, 546*l*. Bartolommeo Vivarini, The Death of the Virgin, in the centre the Virgin, robed in blue cloak, is lying on a couch, surrounded by the kneeling figures of the eleven Apostles, 630*l*.

The total of the first day's sale amounted to 32,425*l*. 7*s*.

The second day's sale amounted to 22,340*l*. 17*s*. Some of the principal items were: Fra Angelico, The Marriage of the Virgin, small full-length figures within the Temple, in the centre stands Zacharias holding the right hands of the Virgin and St. Joseph, 304*l*. Domenico Campagnola, A Legendary Subject, a wooded landscape, with a large building on rising ground to the right, in the foreground two men, 315*l*. Girolamo de Sautta Crocc, The Madonna and Child, with St. Anthony and St. Catherine, the Madonna, in red dress, with green cloak and white head-dress, seated on a mound, holding the Infant Saviour, 420*l*. Taddeo Gaddi, The Virgin and Child Enthroned, small full-length figure of the Virgin, in blue cloak, enthroned under a Gothic arch, holding on her lap the Child, 1,102*l*. Milanese School, The Man of Sorrows, half-figure of Christ, in a red robe, wearing the crown of thorns, 241*l*. Bernardino Pinturicchio, The Madonna and Child, small full-length figure of the Madonna, in red dress and blue robe, holding the Child, who is seated in a red cushion on her lap, 1,102*l*. Andrea Previtali, The Madonna and Child, with a Donor, three-quarter figure of the Madonna, in deep crimson dress, blue cloak and white head-dress; the Infant Christ, seated on her lap, is in the act of blessing, 787*l*. G. B. Tiepolo, The Holy Family, the Madonna, in pink dress, with a white shawl over her head, clasps the Infant Saviour, 525*l*. J. Highmore,

Portrait of Mrs. Pritchard, the Actress, in grey damask dress, black and white head-dress, 787l. P. van Somer, Portraits of a Gentleman and a Lady (a pair), the gentleman is standing dressed in brown embroidered doublet and hose, with cloak over his left shoulder, the lady, in white dress, with underskirt of green, 441l. R. Wilson, A River Scene, in the foreground three figures preparing to bathe, 210l. J. C. N. Perin, Portrait of a Lady, in blue dress, trimmed with lace, 441l. Coello, Portrait of a Lady, in richly embroidered dress, with large lace collar, 199l. F. Zurburan, St. Francis, whole-length figure of the Saint in the brown Franciscan dress, 220l. School of Albrecht Dürer, David and Judith, two small-length figures, almost nude, 399l. N. Berchem, A Landscape, with Travelling Peasants, a rocky and mountainous landscape, 220l. C. Janssens, Portrait of Lucius Cary, Second Viscount Falkland (?), the celebrated soldier, author, and statesman, in white dress, with large white lace collar, and lace cuffs, 273l. Lucas van Leyden, St. Catherine of Alexandria, in blue dress, with long red sleeves, holding a book and a sword, 273l. Sir A. More, Portrait of a Lady, in black dress and white bodice, with lace ruff, 220l. P. Moreelse, Portrait of Lady Lucy Harington, wife of Sir James Harington, and sister of Sir Philip Sydney, 420l. Jan Mostaert, The Magdalen Reading, small half-length figure of St. Mary Magdalen to right, in black dress, red cloak and white head-dress, 441l.; The Virgin and Child, a small full-length figure of the Virgin, in brown dress with red cloak, and wearing a veil, holding the Child on her lap, 273l. A. Van der Neer, A River Scene: Moonlight, on the left, in front is a boat with four men, 210l. Jan Van Os, Flowers and Fruit, a bunch of cultivated flowers in a terra-cotta pot, 220l. P. P. Rubens, The Departure of Lot and his Family from Sodom. Lot is clothed in a large dark grey mantle, his hands clasped, on the farther side of Lot is his wife, shedding tears of regret at their departure, and behind him are his two daughters, 6,825l. Rachel Ruysch, Fruit, Melons, pears, grapes, peaches, plums, mulberries, and chestnuts, with a bird, frog, and butterflies, 262l. J. Van Stry, A Landscape with Cattle, seven cows in a meadow on the bank of a river, attended by a boy with a dog, 357l. J. Sustermans, Portrait of a Knight of France, full length, in bombastard breeches and doublet of black velvet embroidered with gold and silver, 598l. Sir A. Van Dyck, Portrait of a Lady of the Coningsby Family, in pink satin skirt and mauve bodice, with pink and white ribbons, 546l.

THE same firm sold on May 29th the following etchings and drawings by D. Y. Cameron: Views in North Italy, 27 etchings in a portfolio, 325l.; St. Mark's, Number Two, 52l.; The Doge's Palace, 81l.; Harfleur, 50l.; North Porch, Harfleur, 52l.; The Old Tolbooth, Edinburgh, 58l.; The Belgium Set: a series of ten etchings of views, 420l.; Old St. Etienne, 69l. The Five Sisters: York Minster, 183l.

MESSRS. CHRISTIE also sold on May 30th the following engravings:—After Hoppner: Lady Kenyon, by H. Meyer, 115l.; Lord Nelson, by C. Turner, 136l. After Sir J. Reynolds: Miss Jacobs, by J. Spilsbury, 173l.; Jane, Countess of Harrington and Children, by Bartolozzi, 52l.; Lady Beauchamp, by W. Nutter, 84l.; Col. Tarleton, by J. R. Smith, 86l.; Lady Betty Delmé and Children, by V. Green, 54l. After Northcote: Young Lady Encouraging a Low Comedian, by Ward, 147l. By and after J. R. Smith, A Wife, 52l. By and after W. Ward, Alinda, 81l.; by and after the same, The Choice, 88l. After Morland: Guinea Pigs, and Dancing Dogs, by T. Gauguain (a pair), 168l.; St. James's Park, and a Tea-Garden, by F. D. Fine Art Gossip.

IN the June *Burlington* Mr. Lionel Cust continues his 'Notes on Pictures in the Royal Collections,' with three pages of illustrations. Two well-produced colour-plates and a descriptive article by Mr. Roger Fry are devoted to the Richard Bennett collection of Chinese porcelain now on exhibition in Bond Street. Mr. Claude Phillips writes on a picture belonging to the late Sir William Abdy, which was sold at Messrs. Christie's last month, and was formerly attributed to Mantegna. Mr. Phillips declares it to be an unrecognized Carpaccio and re-names it 'A Meditation on the Passion.' Other articles of interest deal with Italian medals, Mexican architecture, and some new pictures in the National Portrait Gallery. The editorial article deals with the recent extensions at the British Museum and the National Portrait Gallery.

A MEETING was recently held in London of the Directors of the Municipal Art Galleries of Great Britain and Ireland, at which a considerable number of the chief centres of the United Kingdom were represented. At this meeting it was unanimously decided that the time had come to urge upon the Government and the general public the need of greater activity in making some of the artistic treasures of the country more accessible for those unable to enjoy them at all times in London. It was felt that the needs of the provinces as well as of outlying portions of the Empire might be met not only by providing new sources of supply, but by the more efficient arrangements of those already existing.

ONE source of education and enjoyment would be the multiplication of circulating loan collections. There are six such gatherings of Turner's drawings already in existence. The provisions of the National Gallery Loan Act which precludes the lending of pictures acquired by gift or bequest until they have been in possession for fifteen years might, it is suggested, be modified.

THE long list of the various annual "récompenses" at the Salon des Artistes Français is published this week. In the architecture section the *médaille d'honneur* has been awarded to M. Henri Prost (a former Prix de Rome) for his exhibits 'Sainte Sophie de Constantinople au VI^e Siècle' and a 'Projet de transformation de la Zone Militaire de la Ville d'Anvers.' In the painting section the Prix Rosa-Bonheur is awarded to M. C. L. Godely for his 'Pardon de Sainte Anne-la-Palud.' No medal of the first class was awarded.

A MONUMENT to J. J. Henner was erected on Sunday last at Mulhouse, and verse in honour of the artist was recited by the Alsatian poet Spetz Isenheim.

MR. FREDK. HOLLYER is exhibiting during June and July his Platinotype reproductions of the works of Watts, at 9, Pembroke Square, Kensington. The collection is representative, and includes a series of photographs of the pictures in different versions and various stages of their progress.

THE new catalogue of the paintings in the Hermitage, St. Petersburg, is now in the press. The first portion deals with the Italian and Spanish Schools. It is satisfactory to learn that, following the plan adopted in the most recent catalogue of the Kaiser Friedrich Museum at Berlin, the catalogue is to contain illustrations of all the pictures in the Hermitage.

THE small collection of pictures at Rieti is, according to a note contributed by Dr.

Bombe to the current number of the *Cicerone*, to be removed from its temporary quarters in the public Library to the Palazzo Comunale. Among the paintings we note the following: the earliest known work of Antonissimo Romano, dated 1464; the only signed work known to exist, by his son Marcantonio of 1511; and a triptych—the Crucifixion with Saints—by an otherwise unknown Venetian painter, Zanino di Pietro.

THERE seems to be no doubt (according to the same number of the *Cicerone*) that the celebrated Weber Collection at Hamburg is to be sold. The names of the greatest painters from the fourteenth century to the seventeenth, are met with in the catalogue, and, even if all the attributions cannot be accepted as genuine, the collection contains a very large proportion of works of great interest and importance.

GOOD advance has been made during the last twelve months in the Photographic Record and Survey of Kent. Those interested are asked to become members and correspondents of the Survey, and contribute, if possible, half a-dozen prints each year, to the collection in the County Museum of Maidstone. Over five hundred views of Kent castles and churches, photographed by Mr. Kenrick, from water-colours made between 1797 and 1808 by Mr. H. Petrie, have been secured, and selections of prints have been exhibited at Canterbury and elsewhere. Prospectuses of the Survey, and information relating to it will be gladly supplied by the Secretary, Mr. H. E. Turner, 14, Queens Road, Tunbridge Wells.

THE preliminary programme of the summer meeting of the Royal Archaeological Institute has been issued. The meeting is to take place at Cardiff and Tenby from July 25th to August 2nd.

MUSIC

THE WEEK.

COVENT GARDEN.—*La Fanciulla del West*.

GIACOMO PUCCINI is the most successful, and, we may safely add, the most distinguished of living Italian opera composers. In 'La Tosca' and 'Madama Butterfly' the stories and the action on the stage were interesting, and at times exciting. Again in his latest work 'La Fanciulla del West,' produced last December at New York, and performed for the first time in England at Covent Garden on Monday evening, the same features are to be found. The libretto is based on David Belasco's 'The Girl of the Golden West.' The action of the first act takes place in the "Polka," a drinking-bar in a Californian camp, and here there are some very stormy scenes: the miners talk, sing, and quarrel over a game of cards. Puccini's music is all the while of a subordinate character: the play is the thing which engrosses attention. Music only begins to exert its sway when Minnie, who has charge of the bar, appears on the scene. She is firm, but very kind to the miners; to them, rough as they are, her word is law. A stranger, who calls himself Johnson, comes in. He is Ramarrez,

chief of a band of thieves and murderers, and his object is to look about and find where the miners' gold is stored, so as to lose no time when a signal announces the arrival of his men. But at sight of Minnie, and after the tender conversation which ensues between them, he resolves to dismiss his men when they arrive. His scheme to sack the place is abandoned. In this later portion of the act an emotional element is introduced, and the composer gives snatches of melody and clever, delicately scored music in the orchestra. The style of melody, also of harmony, is frequently similar to that in 'Tosca' and 'Butterfly.'

During the whole of the second act in which Johnson visits Minnie in her cabin on the hill, apart from the short introductory scene—which is not effective, and in which, curiously, the influence of Strauss may be traced—a dramatic element is added to the emotional. The impassioned strains in which Minnie and Johnson vow eternal love are in Puccini's most insinuating manner. But Rance the sheriff appears, and, offering convincing proof, denounces Johnson as a thief and murderer. Minnie, too proud to show her feelings, declares that the accusation is not true. Rance goes away, and then her love is turned to bitter hatred. She is wild with rage, but owing to Johnson's acknowledgment of his guilt, his declaration of his resolve, due to her pure love, to lead a different life, hatred now turns to pity: she conceals him. Rance, however, returns, discovers him, and threatens to kill him. Minnie's proposal to play a game of cards in which the loser is to abandon all claim to the man forms a very melodramatic ending to a strong situation. Rance loses, bids her good night, and goes off. In this act, with its rapidly changing moods, the music represents the composer at his best; the writing is powerful and the orchestration most effective.

The contents of the third act may be described very briefly. The miners are determined to find Ramarrez, and after a long chase he is caught. But, when they are about to hang him, Minnie appears, pleads with the excited miners to be merciful, an intercession which, if not closely, certainly reminds one of that of Elizabeth for Tannhäuser.

The hue and cry after Ramarrez, the angry crowd, all seemed to suggest music of a sensational and perhaps noisy kind. There was nothing of the kind. The scenes on the stage were thoroughly realistic, but the music in which the principal themes are skilfully introduced is wonderfully fine, and towards the close most pathetic, in fact, some of the most impressive ever written by the composer.

The performance, under the able direction of Signor Campanini was on the whole exceedingly good. Mlle. Destinn's impersonation of Minnie from first to last was admirable, while M. Gilly and Signor Bassi, as Jack Rance and Dick Johnson, were successful both in singing and acting. The piece was extremely well mounted, and the stage effects in the final act were skilfully managed.

Musical Gossip.

THE first two of the four concerts of the International Congress took place on Tuesday. In the afternoon there was an historical chamber concert at the Æolian Hall, which was crowded. The foreign guests were evidently delighted with the Madrigals by Orlando Gibbons, John Wilbye, Thomas Weelkes, William Byrd, and other composers, expressively sung by the Magpie Madrigal Society under the direction of Mr. Lionel Benson: Byrd's beautiful 'Lullaby' had to be repeated. There was instrumental music of the same period interpreted by Miss Evelyn Hunter and Mr. Frank Thistleton (violins), Miss Hélène Dolmetsch (viola da gamba and cello), and Mr. J. A. Fuller Maitland. The harpsichord pieces by Bull, Byrd, and other composers, played by Mr. Maitland, were highly appreciated. Purcell was largely represented in the programme.

THE orchestral concert in the evening at the Queen's Hall included two first performances. One was a Scottish Rhapsody, No. 3, 'Tam o' Shanter,' by Sir Alexander Mackenzie, a work based on folk themes. The bright music was well rendered by the Queen's Hall Orchestra, under the direction of the composer. A scene sung by Miss Olive Turner and Mr. Cynlais Gibbs, from Mr. Frederick Corder's opera 'Ossian,' was the other novelty. The music is ably scored, but the strong influence of Wagner showed that it was not a recent composition. Sir Hubert Parry conducted his cleverly constructed and interesting 'Symphonic Variations,' and Sir Charles Stanford the excellent Prelude to his 'Stabat Mater.' The programme included other works by Dr. Walford Davies, Dr. Vaughan Williams, and Messrs. von Ahn Carse and Joseph Holbrooke.

THE last three concerts (May 25th-27th) of the London Musical Festival were interesting, but the programmes included no novelties. On Thursday afternoon two composers were represented. The first was Mozart, whose G Minor Symphony was in good hands; for Sir Henry J. Wood's love for and admiration of Mozart's music are not assumed. Mr. Harold Bauer's reading of the solo part of the D minor Pianoforte Concerto was excellent; there was no attempt to bring the music up to date. Of Strauss's 'Also sprach Zarathustra,' a first and very good performance was given by the Queen's Hall Orchestra. The 'Dance of the Seven Veils' is not effective in the concert-room. Neither is the Salome lament; only one could not help admiring the dramatic power displayed by Madame Aino Ackté, and her perfect diction.

FRIDAY evening was devoted to Bach's Mass in B minor, and Saturday afternoon to the 'Matthew' Passion. The Choir sang well, and so did the soloists, yet on the whole the renderings of these two great works were not quite so impressive as at the recent Sheffield Festival.

A CORRESPONDENT points out to us that it was not the Sheffield, but the Norwich Choir which sang in the performance of 'Gerontius' reviewed by us last week (p. 609). We gladly make the correction, for the Sheffield Choir has a great reputation to maintain.

At the request of the Dean and Chapter of St. Paul's, Sir George Martin has written a short Festival Te Deum for voices and orchestra, which is to be performed at the special Thanksgiving Service to be held at the Cathedral on Thursday, June 29th, when the King and Queen will be present. The work will be published in June by Messrs. Novello.

PERFORMANCES NEXT WEEK.

SUN.	National Sunday League Concert, 7, Palladium.
MON.-SAT.	Royal Opera, Covent Garden.
TUES.	Mr. Havemann's Orchestral Concert, 8, Queen's Hall. Joan Manners's Vocal Recital, 8.15, Æolian Hall.
WED.	Miss Ethel Henry Bird and Albion Trio Concert, 3, Æolian Hall. — Miss Bessie Mark and Mr. Eric Workman's Vocal Recital, 3.15, Bechstein Hall. — Julia Culp's Vocal Recital, 8.15, Bechstein Hall. — Aimee Carvel's Violin Recital, 8.15, Queen's Hall. — Winifred Hicks-Lyne's Song Recital, 3.15, Æolian Hall.
THURS.	Gertrude Hubbard's Vocal Recital, 8.15, Bechstein Hall. — Miss Christian Muir's Song Recital, 3.15, Æolian Hall. — Yvette Guilbert's Matinée, 3.15, Bechstein Hall. — Miss Edith Miller's Song Recital, 8.30, Æolian Hall.
FRI.	Moriz Rosenthal's Pianoforte Recital, 3, Queen's Hall. — Madam Alma Haas's Pianoforte Recital, 3, Steinway Hall. — Ethel Leginska's Pianoforte Recital, 5.30, Æolian Hall. — Leila Doubleday's Orchestral Concert, 8.15, Queen's Hall. — Robert Maitland's Song Recital, 8.15, Bechstein Hall. — Dora Eshelby's Vocal Recital, 8.30, Steinway Hall.
SAT.	Lionel Tertilt's Lecture, Recital on Viola, 8.30, Æolian Hall. — Backhaus's Pianoforte Recital, 3, Queen's Hall. — Miss Gwynne Kimpton's Orchestral Concert, 3, Æolian Hall.

DRAMA

Some Supposed Shakespeare Forgeries: an Examination into the Authenticity of Certain Documents affecting the Dates of Composition of Several of the Plays.
By Ernest Law. (Bell & Sons.)

IN this modest-looking little quarto Mr. Ernest Law runs full tilt against Government, men, and some widely-spread opinions. The Introduction draws attention to the totally inadequate resources placed at the disposal of the custodians of the National Records, and the lack of encouragement offered in this country to research students, who help to collect the materials for education, while "there are millions of pounds squandered by the Education Department on things useless to the nation or to any individual in it." Mr. Law points out the different and wiser methods of foreign peoples and Governments in regard to their scholars. His general complaints become relevant to the subject in hand, as he asserts that, had the Treasury provided the Record Office with the necessary resources for calendaring and arranging their precious materials, "and rendering them easily and quickly accessible to all students, it would never have been possible for the preposterous fiction about the Book of the Revels to have deluded for forty-two years all the scholars and readers of Shakespeare in four continents."

These are strong words, in which Mr. Law concentrates the results of the arguments he puts forward in his book. "The fiction" to which he refers is the reasoned opinion accepted, after careful consideration, by all the great Shakespearean scholars of the last generation, that the three special Shakespearean documents printed by Peter Cunningham in his 'Extracts from the Accounts of the Revels at Court' were forged. There were, it is true, some points they could not completely explain. Mr. Law says that the puzzle has remained in all its complexity for a quarter of a century, but he is "about to solve the mystery of the Revels' books," and proceeds to do so, to his own satisfaction.

Mr. Law evidently has done a good deal of work: he saw the documents at the Record Office; went to the Bodleian to see the Malone Memorandum; read

several other old letters, and returned to the Record Office to secure facsimiles, the two chief pages of which he has reproduced in his volume. Having gone through all the preliminary details he thought necessary, he consulted Dr. Wallace, who unhesitatingly confirmed his view that each of the documents "is in a handwriting of the time, that each is exactly what it purports to be, that they are *both* absolutely genuine, and that there is not a scrap of anything modern or forged about them." Encouraged by this support, Mr. Law asked a great officer of the British Museum if the documents were in the handwriting of the time, and requested a chief officer in the Record Office to have the ink tested. The writing was allowed to be in the style of the time, and the ink was found to be the same on different pages of the most important document. But Mr. Law does not seem to realize the fact that no one would attempt to forge unless he were well skilled in the handwriting of the period, and knew that the constituents of the ink used in the Record Office were the same from before the seventeenth century down to the date at which he used it.

The next argument Mr. Law discusses is the memorandum of similar details which Halliwell-Phillipps found among Malone's papers in the Bodleian (unsigned, and not in Malone's handwriting). This *might* have been made by some one for the great scholar after his visit to the Audit Office in 1791, when he did *not* see the documents in question. Though there was no allusion to this in his printed works, and none of his friends recalled it in his private conversation, Mr. Law thinks it must have been made from the original record, which had turned up in the Audit Office after Malone's visit, and was the evidence which caused him to say "We *know* the date of 'Othello' and of 'The Tempest.'" There may be many differences of opinion in regard to this discovery. However, Mr. Law goes cheerfully on, and claims that he has proved his two points: "The result is entirely to clear Peter Cunningham... and completely to remove the stigma affixed to the documents in 1868." He proceeds to call them "the *most* valuable extrinsic evidence we possess (with the single exception of Meres' list) for the sequence of the composition of the plays." They give "conclusive evidence as to the date of 'The Tempest,'" and they "support what has been written by such sound and trustworthy scholars as Mr. Sidney Lee, Mr. Gollancz, Mr. W. J. Craig, Prof. Herford, and Mr. Luce." It is not for a mere reviewer to take the position of judge or jury in a question of this importance: "Who shall decide when doctors disagree?"

But it is permissible to criticize Mr. Law's methods, expressions, and arguments. We find his style heavy and involved, making it difficult at times for the reader to grasp his meaning; he has supplied no index to simplify reference,

and his methods of research will not satisfy cautious inquirers. He assumes too much, and accepts as valid conclusions which seem to involve a *non sequitur*. He has not worked at the papers either long enough or carefully enough, and he treats the views of some of the older critics too scornfully. He does not follow Bacon's scientific advice "to search after negatives" for his hypothesis, in order to test its truth.

We propose to publish a further contribution on the subject shortly.

THE WEEK.

KINGSWAY.—*Madame Yavorska in 'Hedda Gabler.'*

ENTERPRISING as is Madame Yavorska's determination to play in English before English audiences, interesting though one experiment of this sort proved in the revival of 'A Doll's House,' she has far too limited a command of our language to do herself justice in any part which is at all subtle or complex. Moreover, it would seem as if she did not possess any very keen sense of character. Our critics, caught in a lenient mood, were loud in their praise of her Nora Helmer, but theirs was over-praise. It was only one side of this heroine, that of the wife in revolt, which the Russian actress realized; the earlier phase of Nora—her irresponsibility and kittenish tricks—she never made quite natural. If her Nora Helmer was half a success, her Hedda Gabler is little short of a dire failure. Either her difficulties with a foreign medium prevent her from conveying her idea of the part, or else she fails to comprehend Ibsen's intentions. Hedda, that carefully studied victim of heredity and a stifling environment, a woman unlucky in her parentage, unlucky in her marriage, who has developed a morbid shrinking from sex and the burdens of sex, and revenges herself for the disappointments of life by indulging a mischievous instinct of destructiveness—Hedda is converted by Madame Yavorska into a tragedy queen, decked out in gorgeous robes, who over-emphasizes every second word, and tries to atone for slowness of delivery by violence of gesture and extravagances of emotion. We find no suggestion of the Norwegian atmosphere of the play, and, instead of a woman struggling to keep in check a tendency to hysteria, we are given a Hedda who is uncontrolled, nay, noisy in her vehemence. To say the least, the performance is unconvincing. Perhaps it is by way of providing a foil to this melodrama that Mr. Kinsey Peile adopts rather too farcical a treatment of the stupidity of Hedda's husband. Admirable work, however, is done by Mr. Franklin Dyall as Judge Brack, and Miss Helen Haye as Mrs. Elvsted, and their acting redeems what would be otherwise a very disappointing revival.

SIR W. S. GILBERT.

THE tragic death of Sir William Schwenck Gilbert on Monday last removes from the world of letters a figure which, as far as present symptoms go, is likely to prove irreplaceable. As librettist and purveyor of "ballads," and in a lesser degree as playwright, he stands out with a personality as distinct as that of Dickens, with whom, indeed, in his intuitive perception of the whimsical in the everyday element of life, he has much in common.

It is now fifty years since the first of the 'Bab Ballads' appeared in the pages of *Fun*, and thirty-five since the memorable succession of operas known all the world over as "Gilbert and Sullivan" was inaugurated with 'Trial by Jury.' Meanwhile humorous verse has passed through many phases, and the popular taste in light opera tends more and more to frothy wit and irresponsible "gags." Yet, these changes notwithstanding, the work of Gilbert in ballad and opera remains as fresh to-day as when 'The Yarn of the Nancy Bell' failed to commend itself to the editor of *Punch* on account of the cannibalistic tendencies of the "elderly naval man" immortalized therein, or 'The Sorcerer' first confronted a comparatively unmoved public at the Opéra Comique. We single out these two branches of Gilbert's measureless activity because—though the opening act of 'The Palace of Truth' contains, perhaps, his most brilliant absurdity—they represent his true *métier*, that in which he consistently excelled; and moreover, the one is bound up with the other. The humour, logically ridiculous and ridiculously logical, is the same in each. The germ of many of the operas, too, may be found somewhere or other in the 'Bab Ballads.' 'The Rival Curates' suggested 'Patience'; the 'Bumboat Woman' and 'Captain Reece' combined to furnish 'H.M.S. Pinafore'; and possibly 'The Fairy Curate' had something to do with 'Iolanthe.' It may be observed that not the least attractive feature of the 'Ballads' in their early form was supplied by the author's illustrations—outrageously appropriate in every case—and it is a deplorable instance of the timidity of genius that in a recent edition new illustrations should have been substituted on the ground that their predecessors were over-extravagant.

It is often said that the Gilbert and Sullivan series, following, as it did, hard upon French light opera, poorly translated as a rule, and conventional alike in sentiment and humour, created a new style of humour essentially English. Such an assertion, however, is at once greater and less than the truth. Gilbertian humour, though it attains its perfect fruition in the work of Gilbert, is no new thing, unless it be new to fasten upon incongruities and contrast the incontestable; neither is it essentially English, unless we are content, in insular fashion, to arrogate to ourselves the monopoly of perfection in this as in other matters, such as vegetable produce and the steel industry. That his work should be invariably clean and wholesome, free from sexual innuendo or indelicate suggestion, is a personal rather than a national trait, and the world-wide delight in the operas is sufficient to show that appreciation of these qualities is not necessarily confined to England.

Yet Gilbertian humour has two principal and distinctive ingredients, and the first is its practical and logical, solid and serious treatment of the wholly absurd. For this we may take, by way of example, the case

of the 'Pirates of Penzance,' and their excessively conscientious methods; the unfortunate Frederick who, born in leap year on February 29th, is irrefutably demonstrated to be only "five and a little bit over," while confidently deeming himself twenty-one; or again the moving, and at times bewildering, discussion between Lords Mountarat and Tolloller as to which of the twain shall possess Phyllis. The second is an elusive, always perceptible vein of pure poetry which, as in the work of Aristophanes, banishes clowning and lends at times a strange and not incongruous touch of pathos to the most fantastic situations.

Comment has frequently been made upon Gilbert's extraordinary presentment of woman grown old and ugly. In every one of the operas, except perhaps 'Trial by Jury' and 'The Sorcerer,' where Mrs. Partlet is hardly a case in point, we find some elderly lady held up to merciless ridicule. 'The Lady Jane,' 'Ruth,' 'Katisha,' and 'Lady Blanche' will readily suggest themselves as examples of a cruelty of treatment bordering on vindictiveness, and altogether at variance with the kindly note characteristic of Gilbertian whimsicality.

As a writer of operatic lyrics Gilbert has never been surpassed. A faultless ear, unerring taste, a positive instinct for rhyme, and when, as happened but rarely, rhyme failed, a matchless ingenuity in surmounting the difficulty and giving it a humorous turn, as in 'The Grand Duke':—

"When exigence of rhyme compels
Orthography foregoes her spells,
And ghost is written gho-est."

together with a talent for extracting grotesque effects from the simplest language place him apart, while such lyrical sweetness as that of the song in 'Iolanthe,' "He loves; if in the bygone years," owes by no means all of its compelling charm to Sullivan's cunningly disposed violins.

The famous dissension among the Savoy triumvirate, attributed in many quarters to a dispute about a carpet, had a prejudicial effect on each of the two collaborators. Neither 'The Mountebanks' with music by Mr. Alfred Cellier, nor 'His Excellency' composed by Dr. F. Osmond Carr attained any striking degree of success, and Sullivan without Gilbert was also unfortunate. More regrettable still, when the two friends came together again in 'Utopia Limited' and finally in 'The Grand Duke' (which had, we fancy, a run of a little over sixty nights) the spell was broken. Recently the staging of 'Fallen Fairies,' a somewhat belated adaptation of 'The Wicked World,' proved that the Gilbertian blank verse play had passed; and we do not think that any of his dramatic efforts outside the D'Oyly Carte period—with the possible exception of that hilarious tour-de-force 'Haste to the Wedding'—would bear revival except by amateurs. They carry the stamp of their age—the mid-Victorian—by reason of the fact that only in a minor degree are they called upon to express their author's peculiar genius. 'The Fairy's Dilemma,' played a few years since at the Garrick Theatre, showed that Gilbert's humorous powers were unabated, while that gruesome little sketch, 'The Hooligan,' produced by Mr. James Welch at the Coliseum in the early part of the present year revealed a quality of hard realism not easy to associate with the master of comic opera. To lawyers the appeal of Gilbert is especially strong. None but a lawyer, or one who has some smattering of Chancery procedure can extract the final ounce of enjoyment from 'Iolanthe.' The law, moreover, abounds in absurdities garbed in deliciously formed language and

Gilbert's legal career, brief though it was, had undoubted value in teaching him to enhance the absurd with an illusive air of practicality.

No notice of the operas would be complete without a mention of the elaborate and jealous care which their writer devoted to the details of their presentation. Such ability is only too rare in authors, who consequently submit their work to the vagaries of actor-managers and public favourites who lose their sense of proportion, and see only the importance of their own parts.

Opinions will probably vary as to the enduring nature of Sir William Gilbert's work. On the whole, we are inclined to think that it will go down to posterity as a treasured possession—to the select few of posterity, that is. Appreciation of the rich and subtle humour of his librettos, of the limpid flow of his lyrics, presupposes some degree of education—"culture," perhaps—in the appreciator. So it has been, and so it will be, for of the millions who have seen and revelled in his creations on the stage nine-tenths have no more than a nodding acquaintance with "the words." It may fairly be assumed then, that with those possessing the qualification above-mentioned plus a sense of humour, his position is even stronger to-day than it was thirty years ago, nor is there any ostensible reason why it should weaken.

LITERATURE

The Mediæval Mind: a History of the Development of Thought and Emotion in the Middle Ages. By Henry Osborn Taylor. 2 vols. (Macmillan & Co.)

Two paths lie before the student of the Middle Ages who desires to take up such a task as Mr. Taylor has set himself. He can concentrate his attention on its greatest figures and its best writers at the moments when they are at their highest pitch, and apply himself to the discovery of what their contribution to the world's store of ideas really was; or, on the other hand, he can devote himself to finding out what the ordinary person, be he lord or burgher, secular or religious, freeman or serf, thought or accepted about those problems of life concerning which all of us must form some sort of working hypothesis. As might be expected from his former books, 'Ancient Ideals' (noticed Feb. 20, 1897, p. 245) and 'The Classical Heritage of the Middle Ages' (noticed July 20, 1901, p. 92), Mr. Taylor has chosen the former path, in which the materials for study are only too abundant, and the labours of many pioneers have marked out the track. A work of this kind has long been required, both by scholars and by the general reader. No general conspectus of mediæval literature exists (we do not forget Prof. Ker's excellent 'Dark Ages,' which has other aims), still less any history of its thought and tendencies. Mr. Taylor's work will therefore be assured of a welcome. It is well-planned, it

shows wide reading and much thought, it is full and balanced: the author has not only assimilated the comments of German and a few French scholars, but has also read not a few of the authors themselves. The ten years that have passed since the issue of his previous work must have been fully occupied in the preparation for this gigantic task, and it is a pleasure as well as a duty to acknowledge such service to the reading public. The work is to be commended to any one who wishes to form an opinion as to the chief currents of thought in the Middle Ages.

We are afraid that scholars will not be satisfied with it, and this for two reasons. There is a kind of literary composition, which flourishes in lectures and sermons, in which the thought is buried under a mass of largely meaningless language, and often there is no thought at all—the major and minor premises have no relation to each other, and do not justify the conclusion. The hearer in this case either loses touch with the speaker altogether, or is forced to accept his results on trust. The reader is in better case, but he finds himself pulled up constantly by the question: "What does this expression mean in the author's mind? Has it any meaning at all?" Much of Mr. Taylor's work provokes this remark. His book consists of two interwoven sections—the first, a statement of facts about mediæval thinkers and extracts from their writings; the second, his personal judgments stated in a language which varies between vague fine writing and pure slang. The question as to style is the more serious as the English reader will at once compare the work with two masterpieces in their way, Dr. R. L. Poole's 'Illustrations of Mediæval Thought,' and Dr. Rashdall's 'Universities of Europe in the Middle Ages.' Philosophy cannot wear the patchwork robe of the good wife of Arras. Still less can 'The Mediæval Mind' be compared with these works in point of matter. Indeed, it bears the same relation to scholarship as a University Extension lecture of the old days to a University—Gladstone on Homer without his style. Mr. Taylor is evidently unacquainted with the first of the books we have named, but he has made use of the second in his chapter on 'The Universities, Aristotle, and the Mendicants,' so that a comparison is not unfair. The slightest glance at Dr. Rashdall's account of the relationship of the Mendicants to the University of Paris up to 1259 and at Mr. Taylor's will show that the latter has not formed a satisfactory notion of what the strife was about, or, indeed, of the work of a mediæval University. His remarks as to the Commentaries of Averroes on Aristotle, too, suggest that he has inadequate acquaintance with them. Not only do the comments not "tend to supplant" the text of Aristotle: they are absolutely unintelligible without it. A comparison with Dr. Poole's work is still more damaging. The values of the two are incommensurable where they treat of the same subjects. As an historian Mr.

Taylor is not so good as an anthologist, and his translations leave much to be desired.

His work opens with a section of 200 pages devoted to a study of the influences which had moulded into form the spirit of Western Europe in mediæval time:—

"a spirit which stood in awe before its monitors divine and human, and deemed that knowledge was to be drawn from the storehouse of the past; which seemed to rely on everything except its sin-crushed self, and trusted everything except its senses; which in the actual looked for the ideal, in the concrete saw the symbol, in the earthly church beheld the heavenly, and in fleshly joys discerned the Devil's lures; which lived in the unreconciled opposition between the lust and vainglory of earth and the attainment of salvation; which felt life's terror and its pitifulness, and its eternal hope; around which waved concrete infinitudes, and over which flamed the terror of darkness and the Judgment Day."

Waiving the "concrete infinitudes," we quote this passage as illustrating Mr. Taylor's strength and weakness. For every word of it good evidence can be produced, but equally good evidence could be alleged for exactly opposite statements—a natural result of the author's decision to limit himself to the notable instead of to the everyday man. Great teachers rarely represent the mind of their time, nor do they always respond to a want of their period; and people are nearly as often notable for being behind their age as in advance of it. Our main criticism, however, is that Mr. Taylor still relies on his old and quite inadequate study of the influence of Greek ideas on the Fathers, and on late pagan writers, and that, under the guidance of the Teuton myth, he leans too much on German sources instead of the purer northern forms. His Volsungs come from the Niebelungenlied instead of the Sagas. The constant insistence on Augustinian Platonism throughout the work seems, too, a mistake in emphasis.

The Second Book deals with the intellectual history of the early Middle Ages from Charlemagne to the end of the eleventh century. The surveys are in themselves useful, though incomplete. The school of Laon is not mentioned, and that of Orleans deserved fuller attention. We note a few typical names of greater importance than many dealt with at some length—Adam de Petit Pont, Alberic of Paris and Alberic of Rheims, Asser of Sherborne, Geoffrey of Auserre, Grimbold, Ivo of Chartres, Ralph of Laon, and Richard of Avranches. The author does not attempt to weigh the influence of the Crusades on the thought of the time. But the chief deficiency is his omission to insist on the extraordinary devotion to dialectics, the groundwork on which thirteenth-century scholasticism was firmly based.

Two following books deal with the idea and the actual, among the saints and in the world. They are entirely praiseworthy, though, when they are compared with special treatises such as

Cotter Morison's 'St. Bernard,' they suffer. Still, these, and the succeeding one on Symbolism, are undoubtedly contributions to knowledge. We call attention especially to the chapters on the hermit life and on ascetic women visionaries, and the whole book dealing with Symbolism. The latter ranges from Honorius of Autun to the 'Romance of the Rose': it depicts the contemplative aspect of symbolism in Hugo de St. Victor, and its practical workings in Durandus. The general reader will find it of interest and of value. On the other hand, the 'Romance of the Middle Age' is treated from a far too sentimental point of view in Book IV.

The last two books deal with Latinity and Law, and with Scholasticism. The first is quite good, and the quotations in the chapter on Mediæval Latin Verse will be welcomed by many to whom the poetry of the Middle Ages has been a closed book. It is to be regretted that we cannot speak so highly of Mr. Taylor's account of 'The Age of Scholasticism'—his extracts are welcome, but his history is inadequate. It is not to be wondered at. Only those who have spent years over the writings of Albertus Magnus, of Aquinas and Alexander of Hales, of Roger Bacon, Duns Scotus, and Ockham, can realize their relative value, and their influence on one another and the lesser minds of their time. Bonaventure and Dante are more efficiently treated—the latter closing the work. Let us add that there is an extremely good Index.

Our criticisms have been directed to the history of thought; of Mr. Taylor's study of the history of emotion we have said little. It may be that he has been too full of his subject to write coldly on it. We must confess that we have found little tangible on the matter in these two volumes. But we would wish to conclude on a different note. Whatever its failings, the critic finds himself in the presence of a book to which, for the first time, he can direct a student anxious for a connected view of the ages which lie between the victory of the Barbarians and the first dawn of the Renaissance, a book which gives the master-thoughts of the great thinkers of the Middle Ages in their own words, and directs the reader to writers who will guide him in further studies. Mr. Taylor's work is one which deserves thanks and appreciation; and we wish our criticism on the way it has been performed to be tempered by gratitude and praise.

The University of Cambridge.—Vol. III. *From the Election of Buckingham to the Chancellorship in 1626 to the Decline of the Platonist Movement.* By James Bass Mullinger. (Cambridge University Press.)

AFTER a long interval a third instalment of Mr. Bass Mullinger's heroic labours as historian of his University has appeared; and in some respects it eclipses

in interest its predecessors. Never perhaps was the intellect as opposed to the genius of England more conspicuous than in the period of which this volume treats. The mighty pioneers of the Elizabethan age were succeeded by the great scholars and thinkers of the Stuart period, during which ideas were originated in England to bear fruitful seed throughout the Western world. Nor was there ever an age in which University education was more highly prized or more eagerly sought than this. In 1641, for example, when a poll was taken of the colleges, St. John's stood first with 280, Trinity fell short of this number by three, and the total number of members, exclusive of servants, was 2,091. These were presumably residents; whilst the University Calendar records that the total number of members "on the boards" in 1748 was only fifteen hundred. "Absolutely—not relatively merely—the number of graduates in the years about 1625–1630," as Dr. Venn observes, "was greater than it ever attained again till within living memory." The names and achievements of Cambridge men during the period treated by Mr. Mullinger testify that in the quality as well as the quantity of its alumni the University occupied a high position. Not merely giants like Bacon, Milton, and Cromwell, but poets, scholars, and divines whom Cambridge was giving to the world, made this time one of the most memorable in her history.

The days were sufficiently stirring. Religious controversy raged throughout England, the political situation was always acute, civil war was raging, and the tenure of every office in the University depended on the issue of the struggle. But the ferment around seemed only to stimulate the intellectual activity of the University; and Churchmen and Puritans strove for the mastery not merely in the State, but also in the republic of letters. In the far West, moreover, a new Cambridge was arising; and the scholars of the fenland University were labouring to further the schemes of John Harvard in New England. But not only does the reader meet with this striking example of "University extension"; reform was already in the air in its most healthy aspect, the widening of opportunities for studying new subjects. The pursuit of history was encouraged by Fulke Greville, Lord Brooke, who by the advice of Bacon attempted to found a chair for that purpose. The conditions were settled by a sort of syndicate consisting of Heads of Houses, which Mr. Mullinger in his marginal note on p. 83 regards as standing in the place of the "Caput," assisted by Lord Brooke's executors. The election was to take place every five years. To prevent the larger colleges from having undue influence (a fear not wholly unknown in the present day), each college was to nominate five electors. Foreigners were to be eligible; but no one in "holie orders" could be chosen, because this subject was to be taught with a view to "the use and application to the practise of

life," which was "the maine end and scope of this foundation." The electors were to choose "such as have travelled beyond the seas, and so have added to their learning knowledge of the moderne languages and experience in foreigne parts; and likewise such as have been brought upp and exercised in publike affairs shal be accounted most eligible, if they be equall to the rest." The professorship was first offered to Gerard Vossius of Leyden, and on his refusal Isaac Dorislaus of the same University was chosen. But the clerical influence was too strong, and Dorislaus was driven from Cambridge. Strange to say, both the professor and his patron Lord Brooke met a violent death at the hands of an assassin.

Another professorship was founded in 1632 by Sir Thomas Adams for the study of Arabic, and met with more success. Modern ideas were further anticipated by Sir Henry Spelman, whose compilation of the 'Sources of English Church History' led him to recognize the importance in research of a knowledge of Anglo-Saxon. The lectureship founded by him had but a brief span of life; and no one was appointed in succession to its first holder Abraham Wheelock, who also held Sir T. Adams's Arabic chair.

In Mr. Mullinger's volume it is curious to note the comparative unimportance of Trinity, and even of his own college, St. John's, by the side of such foundations as Emmanuel and Christ's. Emmanuel, as is well known, was the famous centre of Puritanism; though its most efficient, if not most notable Master, Richard Holdsworth, and his successor, William Sancroft, afterwards Archbishop of Canterbury, were staunch Churchmen. Holdsworth strongly supported the claims of Worthington, the Cambridge Platonist, who was made a Fellow of Emmanuel after a lengthy dispute which was finally referred to a Committee of the House of Commons. The incident is rather important in that it relates to the statute 'De Mora Sociorum,' which compelled Fellows of Emmanuel to resign on proceeding to the degree of D.D., and was evaded by their refusal to do so. Christ's attained fame as the home of the Cambridge Platonists and the college of Cudworth and Henry More, Milton's University career having terminated before the beginning of the present volume. One of Emmanuel's celebrated Masters, Laurence Chaderton, attained to the great age of 102; but resigned some sixteen years before his death, continuing, however, to reside in the college. When Holdsworth was elected in 1637, he made it his first duty to visit Chaderton, saying to his venerable predecessor, "Although no longer Master of the College, you are still master in it." In his hundredth year Chaderton was bold and vigorous enough to undertake a journey to London to protest against Laud's claim to visit the University.

Mr. Mullinger's pages are pleasant enough to gossip over, but his work is too

important not to receive more serious attention. With its admirable Index the volume contains 743 pages and five chapters. Of the first, 'From the Accession of Charles I. to the Meeting of the Long Parliament,' we have given extracts. Chap. ii., 'The Exiles to America,' gives an account of the labours of such men as John Cotton, Winthrop, and Eliot, and has a most interesting description of the views held by Mede and other theologians on the origin of the Red Indians. Chap. iii., 'From the Meeting of the Long Parliament to the Year 1647,' deals with the painful period of desecrations of chapels and deprivations of Master and Fellows. Chap. iv., 'The Commonwealth and the Protectorate,' has an illuminating account of the Cartesian philosophy and the teaching of Hobbes. The last chapter, on 'The Restoration,' is, in our opinion, the most valuable for its account of the Cambridge Platonists.

We cannot close this article without congratulations to Mr. Bass Mullinger on his valuable work, and to Cambridge on producing so strenuous and accurate a chronicler of its fame. The three volumes of the history of the University form a real achievement in the life of a devoted student who has toiled indefatigably with comparatively little recognition by his University or his college. Cambridge has been singularly chary in rewarding the labours of love of its historians. J. W. Clark, it is true, ended his days as its Registrary; but the publication of four volumes of its Grace books, Cooper's 'Annals of Cambridge,' and other valuable labours have passed unnoticed. We have heard of other Universities complaining that no Bass Mullinger has arisen to do them honour.

The Caxton Edition of the Complete Works of William Shakespeare. With Annotations and a General Introduction by Sidney Lee. 20 vols. (Caxton Publishing Company.)

WE have already (*Athenæum*, Aug. 6, 1910) dwelt on the merits of this edition, and, now that it is complete, we may say that we have read with interest and attention all the remarks by critics of varied range and calibre—some, alas! no longer with us—on the plays and poems. On a theme so deep and difficult as the mind of Shakespeare no one man's view is likely to suffice. The poet's work is almost as happy a hunting ground as anthropology for the promoters of theories. Scanty facts can be viewed in a dozen lights, and are often bolstered up into huge edifices of motive and intention.

It is a great advantage, then, to have in this edition the views of many cultivated minds, examining their selected play by the light of Aristotle or the newest American discoveries, and writing with zest about Shakespeare's humours, or with solid erudition about his sources. Such a scheme of co-operation is a modern idea,

and its results are enough to make any single critic pause, for the learned, as in the criticism of Homer, contradict each other, since they often go outside their own play to talk of others. This was only to be expected, and, on the whole, most of the writers are businesslike, and do not expand in the mere verbiage of which all trained writers have the secret. The kind of thing we mean is a mention of

"the fact that any note, essay, paper, monograph, or even treatise on a Shakespearian topic is but a drop in that vast ocean of criticism which fortunately has not yet submerged the broad continent of the dramatist's achievements and fame."

Of the writers who dilate on the evolution of drama Prof. Brander Matthews is one of the best, and in reviewing 'Titus Andronicus' supplies an excellent history of the "tragedy-of-blood," touching on France, Spain, Seneca, and Euripides. The present reviewer has a growing suspicion that Shakespeare adapted, or worked on, much more not of his own conception than is generally believed, and Prof. Matthews deals with this question as follows:—

"Shakespeare seems to have been not so much the author of 'Titus Andronicus' as its editor—its theatrical editor, revising it for use again on the stage. It was a habit of the theatre in those days to keep on improving a play that had pleased, by the elaboration of taking speeches and by the insertion of new episodes; and additions of this sort were supplied to the 'Spanish Tragedy' itself, very likely by no less a hand than Ben Jonson's. It was the custom also to pass over a play that seemed to be getting a little old-fashioned to a younger writer that he might freshen it up. Shakespeare was reworking old stuff, worn out in stage service, when he wrote the 'Taming of the Shrew' and 'Hamlet,' 'Henry IV.' and 'Henry V.' But in these cases, no matter where his material may have come from, Shakespeare assimilated it thoroughly and made it his own. He minted the coin anew and marked it with his own image and superscription."

The Professor proceeds to show that 'Titus Andronicus' is probably a "contaminatio" of two plays which Harvard scholarship has of recent years identified.

The merits of such investigation, where it reveals the changes made by the master-hand, are obvious, and, though the results of some scholars may not be considered so far-reaching as they contend, they generally deserve consideration by serious critics. It is for this reason that we are dissatisfied with Mr. Birrell's pleasant remarks on the two Parts of 'Henry IV.' He opens his first essay by describing Dr. Johnson as "the most sensible, though not the most painstaking of the old-fashioned Shakespearian commentators." But he himself takes not the slightest pains to record or disentangle the solid results of scholarship on the text of the two plays.

Dr. A. W. Ward, on the other hand, supplies Introductions to the three parts of 'Henry VI.' which put us at once in a position to realize all the difficulties

of authorship (treated admirably and convincingly in the "Arden" edition of these plays by the late H. C. Hart); deals with the historical setting and actual performances of the play; and states with modesty his own mature opinions.

Prof. Dowden's views on 'Henry VIII.' are another instance of thorough and judicious handling. He goes fully into the connexion of the 'All is True' noted by Wotton in 1613 with 'Henry VIII.' and brings forward the point that the Prologue of the latter insists, as Mr. Sidney Lee's foot-note says, three times on the veracity of the play. But the Prologue, we may point out, refers to a play which is over in "two short hours." Sir Herbert Tree changed this in his highly successful revival of 'Henry VIII.' to "three short hours," and it is impossible to believe that the Prologue belongs to the play as printed in the First Folio. However fast the Elizabethan actor spoke, he could not have got through the text as it stands with its unusual number of scenes and its time-wasting pageantry. Prof. Dowden quotes Halliwell-Phillipps's opinion that there was a fool in 'All is True.' We think it quite possible. There was one who did effective work, though he did not speak, in Sir Herbert's revival. The extraordinary elaboration of the stage-directions in the play as we now have it (worthy of Mr. Bernard Shaw) tends to show that it was mainly a pageant. Was it not added to and altered many times? Shakespeare wrote some of it, and Fletcher some more; so much seems clear, but what their precise contributions were no one can now tell, though certain passages seem beyond any man but Shakespeare.

'King Lear' is described by Mr. William Archer as

"pre-eminently the tragedy of old age. There is only one other play in which the pathos of old age is treated with any approach to the like sublimity, and that is, of course, the 'Œdipus Coloneus' of Sophocles. But how far less typical is the situation of Œdipus!"

He goes on to summarize the obvious differences between the disasters of the two kings, and, returning to the comparison a few pages later, says of the joint death of Lear and Cordelia:—

"Here again, as compared with the 'Œdipus Coloneus,' 'King Lear' would seem to rank in a more consummate and universal sense as the tragedy of old age. Cordelia dies, Antigone survives."

"While," one imagines the implied argument to proceed, "their kingly fathers in each case perish in sorrow."

"Œdipe, abandonné par des fils ingrats, meurt du moins dans les bras de ses filles," says Mézières in making the same comparison ('Shakespeare, ses Œuvres et ses Critiques'), a sufficiently astonishing comment to a Greek scholar. We are grateful for references to the masterpiece of Sophocles, but it must be pointed out that Œdipus following divine order for-

bade his daughters to accompany him to the place of his end, and, when his end did come, the poet expressly says that it was without pain, "for the passing of the man was not with lamentation, or in sickness and suffering, but, above mortals, wonderful" ('E.C.', 1661-5). There is rather sublimity than "horror" at the death of *Œdipus*, which is thus not comparable with that of *Lear*. In the Greek play *Œdipus* is not the king, but rather the prophet sanctified by suffering, the instrument of divine law.

It is to be noted that Shakespeare, with a feeling for the greatness of his theme, typical as it is of our common nature, has put his characters under the domination of "the gods" of ancient days, who are perpetually appealed to. The Deity in the whole play is only once in the singular (V. iii. 17) :—

And take upon's the mystery of things
As if we were God's spies,

where one might suspect "Gods" to be the true reading.

Mr. Archer gives us no light on the justification of *Cordelia's* silence when the kingdom was divided, nor do we gather whether he shares *Heine's* view, wittily expressed in the following sentence :—

"I believe that she was a little self-willed, and this small spot is a birthmark from the father."

Among other noteworthy pronouncements is that of Prof. Raleigh on '*Troilus and Cressida*,' in which he repeats the speculation stated in his volume in the '*English Men of Letters*,' that the play combines the work of two periods. Certainly it is a wonderful mixture of strength and weakness. W. E. Henley's vigorous manner comes to us now almost as a novelty in the introduction to '*Othello*,' and John Davidson is similarly incisive concerning the '*Sonnets*.' Henley suggests that Burbage was answerable for much in the great plays :—

"I would go so far as to say that had Dick Burbage—a Stratford man, too!—been of another temperament than he was, and lacked the strange, romantic, passionate face he had, there had been differences in Richard, Hamlet, Macbeth, *Lear*, *Othello*, as we have them, and that they who would fain present the dramatist from his plays would do well to look carefully and keenly into the intellectual and emotional quality of his chief of actors."

We may fairly ask, Where is this quality revealed for our examination?

In the *Sonnets* Davidson saw a real story. If it is not that, it is certainly the most transcendent make-believe that ever came from a human pen. Shakespeare to Davidson, following Emerson, is

"the most truly known of all English men of letters; he and his work are one indissolubly. The creative artist, Boswell, has made a palimpsest of the lexicographer's works, writing, as it were, the illuminated life of a saint on the rough hide of Behemoth."

Mr. Alfred Austin, who introduces the last volume ('*Venus and Adonis*,' '*Lucrece*,' &c.), explains that to have an opportunity of writing "for American readers" is a "peculiarly attractive temptation." He contradicts Davidson concerning the *Sonnets*, which represent "what other people would feel in the circumstances supposed," and proceeds to ask "what we know for certain concerning Shakespeare." The summary which follows brings out well the advantages of Stratford as a nurse of youth, and those merits of country minds which the town-bred find it difficult to perceive. Then at the end of a paragraph about "the early and scarcely ideal marriage" of the poet Mr. Austin adds :—

"In the welfare of his children he manifested a solicitous and unintermitted interest."

Did he? That is the very question which troubles some keen admirers. We have no evidence to justify such a conclusion. People who write about Shakespeare should distinguish between fact and conjecture. This kind of biography founded on nothing has led people to discredit the facts that are known.

The various indexes in this last volume will be found very useful, and throughout Mr. Sidney Lee's annotation will put the reader in the way to understand any obscurities that may delay him.

A Year in the Infant School. By Mabel Bloomer. (Blackie & Son.)

MISS BLOOMER in publishing the plan of a year's course of kindergarten teaching to be given to infants has produced a really attractive volume, which should interest many readers who are not professionally engaged in schools. We hear on all sides much fluent conversation concerning the kindergarten and the principles underlying Froebel's methods, but a real understanding either of the principles or methods is not common. Miss Bloomer tells us that the lessons here sketched were successfully given in a town school for infants; and we doubt not, after carefully considering the Preface and succeeding chapters of the work, that Miss Bloomer has mastered the spirit of Froebel's teaching, and has skilfully adapted his methods to the requirements of English children. The average age of the pupils for whom these lessons are intended is not stated, but is probably about six.

The Preface (the English of which to some extent lacks terseness and elegance) explains that the object-lesson or portion of nature-study which is the dominant feature in the work of every week is associated with the changing seasons of the year, beginning with spring, the period of "Nature's awakening," and ending with winter, "a sleeping time." The children are told much in simple language

about the marvels of plant and animal life, and are taught to observe and experiment by and for themselves. They hear stories—mostly original—and older legends; they sing songs and play games; they do simple exercises in paper-cutting, in modelling, in brushwork; and all these exercises are made to refer more or less directly to the dominant nature lesson of the week, and this, in its turn, depends upon the season.

In this way correlation of subjects of instruction runs like a golden thread through the teaching, not only of every week but also of the whole year. This principle of correlation of subjects is generally neglected in older classes, where, indeed, its application is rather more difficult; but it is, of the greatest importance in all schoolwork. Miss Bloomer adequately recognizes this, and her insistence on its application in infants' classes accounts in no small degree for the efficiency she claims for her own school work.

Instruction in "the three R's" is not neglected, but is given rationally, and with due consideration for the stage of mental development of the young scholars in a kindergarten. Singing and recitation are followed in every day's work by training in the right use of the vocal organs; and the children are shown how to produce the correct sounds of letters either alone or in combination: there is no great difficulty in this, even in English. The habit of distinct articulation is thus fostered very early, and good reading should easily and naturally follow. Miss Bloomer recognizes the importance of choosing good poetry—i.e., good in respect of metre as well as meaning—and suitable songs. We notice, however, that some of the songs included in these lessons are of a pitch too high for infants to sing without forcing the voice.

The lessons in arithmetic during the year enable the scholars to do calculations in the first four rules (by concrete examples) with numbers not exceeding 25. The results only are written down; the teaching is oral, and the calculations themselves are, we gather, mental. This is as it should be. In this branch of the work care is necessary that the questions set are free from unreality. Children, even infants, are always shrewd, but generally silent, critics of their teachers; they would, we think, feel some infantine scepticism about Miss Bloomer's carrier pigeon whose journey of 25 miles extended over two days.

A good deal of moral teaching is associated with, and founded on, the nature lessons in the kindergarten. Whether this can be done with lasting advantage is perhaps doubtful. No doubt Miss Bloomer and other skilful and enthusiastic teachers can do almost anything with the children who are fortunate enough to be under their care; but the connexion between the phenomena of germination and of the development of plant and animal life, and human morality, is by

no means apparent; and we have been in kindergartens where the inculcation of morality deduced from object-lessons or nature-study was a lamentable failure.

No one can doubt that the spirit of Froebel's teaching should be infused into all our infants' schools; but we do not feel so sure that his methods are as suitable to English children as to their brothers and sisters in Germany; at any rate, in many English kindergartens that we have visited there was often a rather depressing atmosphere of artificiality: the Froebelian methods should be "adapted, not adopted." Miss Bloomer has, however, shown that infants' schools may be efficiently and happily conducted on the principles advocated by Froebel; and we are convinced that teachers and parents who read her volume will gain much information and not a little wisdom from its perusal.

The Poems of Eugene Field. (T. Werner Laurie.)

EUGENE FIELD deserves a more generous reception than has as yet, perhaps, been accorded to him in this country. Though in England the most widely known of his achievements is probably the familiar ballad touching the "little peach" that "in an orchard grew," it would be unfair to permit the fortuitous popularity of that doleful composition to overshadow more abiding claims to consideration.

The unevenness of his work, viewed, as here, in the bulk, becomes evident, leavened as it is by a quantity of light occasional verse, boasting no merit above the ordinary, together with numerous pieces based on contemporary American politics and gossip—such as 'A Battle in Yellowstone Park' or 'Thomas A. Hendricks's Appeal'—which can at no time have been capable of stirring any reader not conversant with, and interested in, the facts. More distinctive results are attained in the lays of Western mining camps and other rough-and-ready communities. The humour, however, though by no means lacking, tends to be thin and long drawn out; and the expressive economy of language which gives point to 'The Heathen Chineese' and its companion lyrics is seldom discernible. The following lines,

But one mean cuss from Nigger Crick passed criticisms on 'er—
Leastwise we overheard him call her Pettibone's madonner,
The which we did not take to be respectful to a lady,
So we hung him in a quiet spot that wuz cool 'nd dry 'nd shady,

though no unfavourable example of Mr. Field's Western touch, can claim but a humble affinity with the "sinful games" indulged in by that memorable 'Society upon the Stanislaw.'

Yet another and more exhilarating aspect of the author's muse reveals itself in the 'Echoes from the Sabine Farm'

(the joint work of Eugene and Roswell Martin Field), which is an ingenious series of Horatian paraphrases, unashamedly transatlantic in tone. The rendering of Ode xxxviii. Book I. deserves quotation:—

Boy, I detest the Persian pomp;
I hate those linden-bark devices;
And as for roses, holy Moses!
They can't be got at living prices!

Myrtle is good enough for us,—
For you, as bearer of my flagon;
For me, supine beneath this vine,
Doing my best to get a jag on!

It is, however, from the section devoted to 'Poems of Childhood' that this somewhat bulky volume will derive enduring value. As a writer of child-poetry, the author is secure on his pedestal. The range of his imagination is not, indeed, wide, nor his skill in the handling of lyric forms unusual, yet for limitations such as these, zest for his subject backed by taste and delicacy of feeling make ample amends. His keen delight in, and appreciation of, children and the little things of child-life expressed themselves in daintily fanciful measures of irresistible charm, or again, with a simple sincerity whereby, in the more serious poems—we may cite as cases in point, among many, 'Little Boy Blue,' 'Telling the Bees,' and 'Christmas Treasures'—pathos real and poignant is achieved without a hint of mawkishness. Of his humour—that phase of it, at least, which illustrates the quaint blending of laughter and tears peculiar to the American spirit—'Grandma's Prayer' is a good example:—

I pray that, risen from the dead,
I may in glory stand—
A crown perhaps upon my head,
But a needle in my hand.

I've never learned to sing or play,
So let no harp be mine;
From birth unto my dying day,
Plain sewing's been my line.

Therefore, accustomed to the end
To plying useful stitches,
I'll be content if asked to mend
The little angels' breeches.

That Mr. Field's nonsense songs, in the manner of Edward Lear, should rank among his least successful efforts is not surprising. The inspired absurdity which was Lear's is a gift proper to one who, like Lear, aimed solely at the entertainment of children. Mr. Field's chief intent, on the other hand, seems to have been that of exploiting children—if the expression be permissible—for the delectation of their elders—particularly himself. It is to the last-named consideration that these 'Poems of Childhood' owe their freshness and character—qualities which will, we doubt not, continue to attract new and appreciative readers.

NEW NOVELS.

The Girondin. By Hilaire Belloc. (Nelson.)

It is a pleasure to come upon a novel of the French Revolution which does not deal with the French Revolution. Mr. Belloc's tale, it is true, opens with a

spirited sketch of Girondist conditions in Bordeaux, and an outbreak, and he has introduced certain military movements incident to the year 1792. But his narrative is not concerned one whit with marquises and sansculottes and the tumbrils and the "Terror." It deals with the fortunes of a young man who is obliged by a foolish act of violence to become a fugitive from both parties, and who is finally killed by misadventure on a battlefield. The value and interest of the story are wholly derived from Mr. Belloc's realization of such a man's environment and life. It is a little bewildering to his reader at times; the action moves in a confusion towards a confused end. But this may almost be considered as part of the author's art, as the events in which Boutroux was engaged were probably as confused to him. There is an admirable account of a battle which does not compete with Stephen Crane's remarkable study in 'The Red Badge of Courage,' but is nevertheless as intuitively true. Mr. Belloc's style of English is above reproach, a welcome phenomenon in a day when fiction is of reprehensible slovenliness.

Burning Daylight. By Jack London. (Heinemann.)

THE excessive violence of Mr. London's latest personification of Brute Strength rather detracts from the reader's interest in him. The hero of this novel is an extravagant creation, capable of the most remarkable feats of hardihood and courage. He is also a speculator of the most desperate character, a "plunger," as the phrase goes, whose rashness is only equalled by his luck. Altogether we get too uncomfortable an impression of this restless person to read his career in peace. Peace, however, is what Mr. London is aiming at, for after a course of wild adventures, physical and financial, Elam Harnish settles down to a quiet life in the Californian valleys with a wife and the prospects of wholesome poverty. It is a picturesque narrative which is not quite convincing, but will confirm Mr. London in his place as the most forceful writer of fiction in his country.

The Horseshoe. By Mrs. Fred Reynolds. (Chapman & Hall.)

"THE green coast of Cornwall," with its mixed population of farmers and fisher-folk, provides the framework for this pleasant story, which plays mainly round such attractive themes as love-making in flowery lanes, heroic banquets on "pasties" and clotted cream, and monster "takes" of mullet and pilchards. Black magic, shipwreck, smuggling, and other subjects of a less cheerful kind are also introduced, but not brought into prominence. The characters are lightly yet humorously sketched, and chief among

them we place the imperfect damsel who smoulders perpetually in a state of resentful amazement at the social success (incomprehensible also to this reviewer) of her insipidly virtuous cousin.

The Gift of the Gods. By Flora Annie Steel. (Heinemann.)

MRS. STEEL'S power as a novelist does not wholly subjugate the critical reader of this short novel, the scene of which is laid in an island of the Outer Hebrides. Her theme is the antagonism between a woman's duty to the law and her love of and pride in her husband's ancestral island-home. Her husband loses his life in saving the Irishman alluded to in the title after signing away his island in a deed of sale. The deed is temporarily lost and the widow destroys a letter proving that it was signed, and is only prevented from destroying the deed when it comes into her possession by sudden alarm at the defective breathing of her little son. Here we have one of those convenient devices which take the place of Fate, and there is another of them when the hero, by saving the child's life, appears to repay its mother for the loss he has unwittingly inflicted upon her. On the other hand Mrs. Steel gives us one admirably dramatic scene—the death of an old woman from shock at a sudden disillusion while on her way to the Communion Table. The characters in the story include a Scotch servant, as racy as she is voluble, and the hero—apt at poetic improvisation—has decided charm. The squalid and starveling lot of crofters living on barren soil in or towards the last decade of the nineteenth century is well depicted.

Lilamani: a Study in Possibilities. By Maud Diver. (Hutchinson & Co.)

A POPULAR Anglo-Indian novelist here presents the story of a romantic marriage between an English baronet and a high-caste Hindu maiden. The trials and difficulties inseparable from such a union are treated by Mrs. Diver with all comprehension and impartiality; but she seems to us from the artistic point of view ill-advised in endowing her heroine with perfections—moral, intellectual, and physical—which would in any country mark her out as an altogether exceptional person. The situation thus loses in probability and human interest, and our feeling towards Lilamani is tinged with something of that prejudice which the pattern characters of fiction naturally arouse. Yet the charm and sweetness peculiar to the native Indian lady make themselves felt through the welter of injudicious panegyric, and we rather admire the author's courage in making this ethereal creature express herself—with delightfully quaint effect—in a dialect closely resembling that of F. Anstey's "Babu." The other persons of the story seem important mainly in relation to her, and have not much life of their own.

The Job Secretary: an Impression. By Mrs. Wilfrid Ward. (Longmans & Co.)

WE congratulate Mrs. Ward on the originality of the plot of this short novel; but she fails to sustain interest owing to the abuse of coincidence (fatally common in English fiction) and the fact that none of her characters is particularly attractive. She imagines that a novelist engages as his secretary a runaway wife who, seeing in the story which he has in hand a parallel to her own case, becomes his critic and adviser, as also does her repentant husband, who happens to be his friend and visitor while ignorant of the lady's residence and occupation. Thus the novelist's story becomes in the end a veiled biography, true to the feelings of the married couple in whom he has confided. In the background the novelist's wife is a slightly pathetic figure; and those who admire frank absurdity will be amused by the incidents in which the "job secretary" reveals her unfitness for the post.

The Jew's House. By Fergus Hume. (Ward, Lock & Co.)

THIS is a long and melodramatic story of the type which the public has learnt to associate with its author's name ever since the 'Mystery of a Hansom Cab' made a sensation. The opening chapter introduces an adventure in a dense fog, and prepares the way for the murder which occupies chapter two. The last chapter but one presents a double tragedy, and the solution of the murder mystery set forth at the beginning. Then come wedding bells, and a tableau of the strictly conventional sort. It is a good "shocker," as such narratives used to be called, when their price was rather lower than it is now, and that of more thoughtful tales much higher.

The Ascent of the Bostocks. By Harold Storey. (Stanley Paul & Co.)

THE title of this blameless narrative suggests flippancy and suburbia. But the book is innocent of facetiousness, and deals, rationally and humorously, with life in a quiet country town. We like the story, for, though frequently concerned with vulgar people, it is never itself vulgar. The heroine, a chemist's daughter who has enjoyed the advantages of a good education, behaves with remarkable foolishness in her love affairs, and has much better fortune than she deserves. Her mother, vulgar, fussy, inconsequent, and kind-hearted, is a genuine and humorous piece of portraiture. Prosperous, middle-class provincialism is excellently conveyed, and the whole tale makes very pleasant reading.

THEOLOGICAL LITERATURE.

Early Religious Poetry of the Hebrews. By E. G. King. (Cambridge University Press.)—Dr. King's new book deserves much commendation. It seeks to avoid the extravagances of previous writers on the subject, shows considerable insight into the theme, and is written in a clear and sympathetic style. Another point in its favour is its handy and unpretentious "manual" size. The reader is not asked to give his mind to abstruse discussions on the nature of Hebrew poetry and versification, but has the main points presented to him in an easy and attractive form.

After speaking in the Introduction on parallelism, which he aptly describes as "rhyme of thought," Dr. King turns his attention to the problem of metre, giving preference to the perfectly tenable view that "Hebrew metre consisted, not in long and short syllables, but in the rhythmical beat of the accent." One great hindrance to any attempt so far made to determine the exact laws of metre in Old Testament verse has been the fact that we cannot be sure whether "the Masoretic vowels and accents represent the ancient pronunciation of the language." But Dr. King does not on that account favour conjecture on a large scale. As he rightly says, "the knowledge of Hebrew verse is not yet sufficiently advanced to justify us in correcting the text in favour of any metrical theory unless we can support the charge on independent grounds"; and one feels tempted to add that such "independent grounds" may sometimes be purely imaginary.

In turning to the contents of the chapters that follow the Introduction it is necessary to explain that the book is a treatise on the nature of both the rhythm and substance of Hebrew poetry during the entire range of Old Testament times, the title chosen by Dr. King being merely intended to mark off this great period from that of the Synagogue which followed. The first two chapters deal with the 'Earliest Poetry' and the 'Poetry of the Early Kingdom.' Then follow instructive chapters on the 'Kinah' or elegiac metre and 'Alphabetical Poetry.' The headings 'Problem of Suffering' and 'Poetry of the Seasons' show the stress which our author wishes to put on the subject, besides the form, of poetic presentations. The remaining two chapters deal with the 'Strophe' and 'Dramatic Lyrics.'

It would at the present time be impossible to secure unanimity on even the bare outlines of Hebrew poetry. Some scholars are likely to regard certain points of analogy which Dr. King seeks to establish between the history of creation and the poetry of the seasons in the Psalter as rather fanciful, and there is likely to be a difference of opinion on various other important matters. But we will in this notice only draw attention to what seems to us an unpoetic and not sufficiently correct rendering of Ps. xlii. 1. Instead of "As panteth the stag" we here find "As bleateth the stag." But the Oxford edition of Gesenius's dictionary does not support the view that "the Hebrew word is onomatopoeic, denoting [in the first instance] the voice of the thirsty stag." On the contrary, the use of the verb in cognate languages, rather favours "panteth." But even if "bleateth the stag" were allowed, "bleateth my soul" could hardly be defended.

The Composition of the Book of Isaiah in the Light of History and Archæology. The Schweich Lectures, 1909. By the Rev. Robert H. Kennett. (Frowde.)—Prof. Kennett's Schweich Lectures will be read with much interest. From the earnest tone which pervades the discourses one may gather that their author's principal object has not been to follow the lower ambition of saying something new, but rather not to say anything that had not first obtained the full impress of his own mind.

Some readers will, without trying to go deeply into the subject, take offence at Prof. Kennett's readiness to assign a considerable number of passages in both the first and the second part of the Book of Isaiah to Maccabæan times. But there is really no a priori reason why such a view should not be taken. If it be once admitted that the book is a collection of prophecies belonging to different times, why refuse to give a hearing to the claims of the last great period of successful struggle for freedom among the Hebrews? Can the Maccabæan period be regarded as of less importance in the development of pre-Christian Israelitish polity than "the close of the Persian period," to which, as Prof. Kennett reminds us, portions of Isaiah are now assigned by prominent critics? There is clearly, from this general point of view, nothing either "wild" or "sceptical" about the theory which our author has felt compelled to advocate.

But opposition to Prof. Kennett's view, which will count, is sure to come—and is, in fact, in a manner already extant in published works on the subject—from scholars who have, like the Schweich Lecturer, carefully weighed the facts and arrived at a different conclusion. It is, to begin with, very doubtful whether Prof. Kennett's theory can be made compatible with the evidence derived from Ecclesiasticus, which is to the effect that about B.C. 200 the books of Isaiah, Jeremiah, Ezekiel, and "the twelve Prophets" were already clearly marked out. As, moreover, according to Jewish tradition, the gift of prophecy ceased with Malachi—whose activity, by the way, is placed by the same tradition close to the period of Alexander the Great, or is even made to synchronize with it—it seems much less likely that fresh portions were added to the Book of Isaiah in Maccabæan times than that new devotional compositions found their way into the Psalter in those days.

It is also open to grave doubt whether Prof. Kennett is right in regarding the first twelve chapters or so of the second part of Isaiah as "a mere mosaic of fragments." Other scholars have been able to read and enjoy these chapters without feeling compelled to adopt such a view. Later editors no doubt had a hand in the redaction, but their proceeding was perhaps nothing like so drastic as we are now asked to believe. And as Prof. Kennett's theory as to the Servant of Yahweh representing the Hasidim or pious minority of Maccabæan times, hangs together with his fragmentary hypothesis, it is clear that, if his view on the latter point is disallowed, the Hasidæan part of his scheme will of itself fall to the ground. It is true that much of what is said about the suffering Servant in Deutero-Isaiah would fit in very well with what is known or can be imagined to have been the lot of the pious "remnant" about the middle of the second century B.C.; but a similar analogy could be drawn between the Servant of Yahweh and the few faithful idealists during almost any period of struggle in earlier Hebrew history.

Several other interesting points raised in the Lectures might be discussed, but we will instead draw special attention to the careful way in which the lecturer has made use of both historical and archæological research in his treatment of this great and interesting subject. The Lectures are, indeed, what their title promises them to be. That the style must have a flavour of its own follows from what we said at the beginning of this notice about Prof. Kennett's own mode of critical study. We cannot, however, say that his manner of expression is equally felicitous throughout. Among the main things to be considered in a work of this kind are critical acumen and width of comprehension, and our conclusion must be that on most debatable points the Lectures are highly suggestive rather than sufficiently decisive.

The Hexaplar Psalter: being the Book of Psalms in Six English Versions. Edited by William Aldis Wright. (Cambridge University Press.)—Mr. Aldis Wright's edition of the Psalter in six English versions is an instructive and welcome contribution to the literature which has already appeared or is about to appear to celebrate the Tercentenary of the Authorized Version.

As Tyndale's work on the Old Testament did not include the Psalms, the first of the six parallel columns is here occupied by Coverdale's Psalter as published in 1535. There follows the version published in 1539 as part of the Great Bible, which was again the work of Coverdale, constituting a revision of previous renderings. It will be remembered that the Prayer Book version of the Psalms is, apart from the altered spelling and some later modifications, the same as that of the Great Bible. The third and fourth columns are occupied by the versions taken from the Geneva and Bishops' Bibles, as published in 1560 and 1568 respectively; and the Authorized and Revised Versions complete the series.

Mr. Wright's Preface, though brief, gives the information necessary for the bibliographical appreciation of the edition, but those desirous of obtaining fuller knowledge will have to consult other publications.

The last twenty-four pages are occupied with lists giving first the marginal readings of Coverdale's version as well as those in the Geneva, the Bishops', and the Authorized and Revised Versions (the Great Bible being without marginal readings), and then the differences between successive editions of Coverdale, the Great Bible, and the Bishops' Bible.

The Revelation of the Son of God. By Ernest Arthur Edghill. (Macmillan & Co.)—The title-page indicates that this volume contains the Hulsean Lectures for 1910-11, and explains that these deal with some questions and considerations arising out of a study of second-century Christianity. In the first lecture, on 'Reason, Religion, and Revelation,' Mr. Edghill, after stating that "Christianity was a religion and embraced a revelation," asserts that "Rome rejected the Christian faith because she admitted the Christian claim," and proceeds to the definition that "a revelation puts forward for man's acceptance certain things or truths which would otherwise have been neither believed nor known." Some Romans in the first century, and more, but still few, in the second, had knowledge of Christianity; but the proposition is not convincing that those who rejected it admitted its claim to be a revelation. Is it necessary, it may be asked, to say of revelation that it puts forward things which would not otherwise

have been believed? Mr. Edghill is careful, in spite of his definition, to tell us that revelation must not be irrational, and seems to cast a slur on that definition. He refers, too, to Matthew Arnold's characterization of the Old Testament as "the revelation to Israel of the immeasurable grandeur, the eternal necessity, the priceless blessing of righteousness," and does not seek to convince us that Israel would have repudiated that truth, had it not been received through revelation.

In the very interesting lecture on 'Miracle and Character' Mr. Edghill endeavours to prove that as the evidential value of miracle is primarily and mainly for actual witnesses, there is the significant silence of the Apostles in the first century and the apologists in the second; and, further, that the living power of Christ in the Church has overshadowed and yet interpreted the significance of the mighty works of past days. Devout men generally will accept the suggestion regarding the living power of Christ; but daring critics have argued that the silence of the Apostles proves that the miracles did not happen. The apologists, it must be remembered, were addressing certain definite persons on behalf of Christians, and sometimes of Christianity; and arguments based on the fact of miracles would not justify the accused or raise the value of their religion. Mr. Edghill sees clearly that the apologists recognized that they could gain little for their cause from miracles, and does not hesitate to admit that "no argument in the ancient world would have carried less conviction," and to assert that "Christians no less than pagans believed that the working of miracles was, as a rule, a matter of magic of which almost any one might be capable, without any relation to any moral or religious conditions or qualifications." In dealing with the belief in miracles Mr. Edghill points to the Acts of the Apostles as the work of an author whom Prof. Harnack considers "neither credulous nor uncritical." Prof. Harnack is not fairly represented by Mr. Edghill, since the statement regarding the author of Acts is that "we cannot say that he is on the whole either credulous or uncritical." Having used the phrase "on the whole," Prof. Harnack adds: "His real weakness as an historian seems to me to lie... in the first place, in his credulity in reference to cases of miraculous healing and of 'spiritual' gifts."

Objection might well be taken to the confession in the lecture on 'Christ and Christian Creeds' that "the Creeds... express not so much what we believe, as what we wish to believe... for we recognize the feebleness of our own faith, and in our struggles the Church is our standard-bearer."

Mr. Edghill is certainly a most interesting and suggestive lecturer, though his statements often provoke criticism, and his book is valuable as a study of second-century Christianity. His fine charity is shown in his words: "Let us be infinitely tender and tolerant to those who, having faith towards our Lord Jesus Christ, cannot receive the miracles exactly as they are recorded in the Gospels or interpreted by us."

OUR LIBRARY TABLE.

MR. J. E. C. BODLEY has written a new Preface of great interest for a cheaper reissue of his book on *The Coronation of Edward the Seventh: a Chapter of European and Imperial History* (Methuen). The book, which we noticed at length on July 11th.

1903, is a serious contribution to the history and influence of the Crown which, as we said, "stamps the author an English historian of the first rank."

The new Preface is a thoughtful examination of

"the general causes of the enhanced power and value of the Crown in our nation, at a period of change the like of which the human race has never seen before."

Steam, electricity, and other means of rapid communication have now taken a commanding place in the fortunes of nations, and the result is "so overwhelming as to bewilder the most attentive observers." The change has led to a charge of decadence in which Mr. Bodley does not altogether believe. He finds reason to suppose that

"at present the best talent in the world is developed most highly in occupations, issue of the scientific inventions which are transforming the habits, the needs, the mentality of mankind."

Under such conditions, "history will not, and cannot repeat itself, as in past ages." The French Revolution had its final recrudescence in 1848, but could not shake Victoria's throne, and it is added: "Sixty years on, there is little sign in Europe of the spread of the republican idea."

We should have thought that the dissemination of Socialism over Europe had left its mark very clearly on literature, if not on national life. Against the collapse of the Crown in Portugal Mr. Bodley sets the rule of the Kaiser in Germany, and he sees "little sign at home of a waning of imperial instinct, or of domestic loyalty." On the first point we are not so sure, but our readers should study Mr. Bodley's summary for themselves, as fine a tribute to monarchy as we have seen of recent years. The perils of the present time are fully recognized, and those who are no historians should enjoy the author's incisive comments on such themes as the rage for games. Do we misapprehend the conditions which prevailed in ancient Rome, and those of to-day, when we speak of the modern cry for "bread and circuses"? Mr. Bodley says so, and his verdict may be a comfort to some thinkers who see in "freak" dinners the increase of luxury and the rise of an undistinguished plutocracy a sinister suggestion of later Rome.

A Bird in the Hand, by Rosalind Denis-Browne (Methuen & Co.), consists of twelve short essays upon such subjects as widowhood, 'Falling in Love,' and 'The Pursuit of Happiness.' The ideas and comments upon life expressed are of the kind which, deemed advanced some years ago, have nowadays begun to rank as platitudes. The author's trick of placing notes of admiration to emphasize small points and trifling witticisms worries the reader, obliging him to re-examine sentences which hardly bear a second reading. The style of writing is correct, the matter often sensible; our sole objection is that it is far from new.

We notice one or two good things; for example,

"We sometimes condemn our fellow-workers for playing to the gallery, but probably we are just as busily engaged in playing to the dress-circle or the stalls."

But what can be said of the following advice to geniuses, a class of persons we had always thought above instruction?—

"....The genius should be normal, should be a realist in the truest and best sense of the word—should be an ordinary man or woman only on

a grander scale than others—should talk and write commonsense, and possess that wholesome and blessed sense of humour without which the greatest talents are incomplete."

There is probably a public for such thoughts, as volumes of them now appear frequently.

THE growing popularity of *The Eastern Alps* is shown by the extra hundred pages of the new edition of Baedeker. Munich is so generally recognized as a starting-place for Tyrol that it has been added to this guide, with several maps of the city and neighbourhood. The opening of such new roads as the great Dolomitenstrasse has effected immense changes in the district, and has caused the editor of the volume much work. There are many hotels and routes given for the first time; and—greatest change of all—new motor-diligence drives are carefully set out. The heights of various places have been corrected, and useful information is given as to new ways of sending knapsacks and other light luggage to those Alpine Club huts which rapidly grow in number, and now completely cover the Dolomites and the adjacent Austrian mountains. Baedeker is carried in the pocket of every tourist in Tyrol; and the mere sight of such pleasant sounding names as Pieve di Livinallongo and San Martino di Castrozza makes one long to pack one's bag. The motorist is now allowed to traverse most of the main roads, though some—happily, we think—are still closed to him. When he visits the Eastern Alps his life and the lives of others will be in danger unless he makes himself acquainted with the rules of the road, which change in a puzzling way in closely adjoining districts. But all these things are written in Baedeker. The whole volume is as accurate as a book can well be. The Index, however, needs revision. In a guide-book a correct index is essential; yet a reference to Pieve (Buchenstein), Adelsberg, and Affen Tal (we could give other slips) shows that a little more care in this one respect is wanted.

WE have received from the Ministère du Travail et de la Prévoyance Sociale the *Rapports sur l'Application des Lois réglementant le Travail en 1909*. The volume contains many articles that will interest all who study labour questions, and there are some valuable statistics at the end of the book. It is published by the Imprimerie Nationale at Paris.

Bleak House (2 vols.) and *Edwin Drood* have recently been added to the excellent "Dickens Centenary Edition" (Chapman & Hall). Prefixed to the latter is the fragment of the "mystery" discovered by Forster at the eleventh hour, and printed in the 'Life.' The volume also contains that sad injustice to the illustrious memories of Mr. Pickwick and the Wellers, "Master Humphrey's Clock," reperusal of which, the charm of its present guise notwithstanding, convinces us anew that the intervention of the trunk and butter business came none too soon.

GENTLE shepherds are in the ascendant in these days, but Mrs. Adelaide L. J. Gosset observes that no book at all adequately descriptive of the shepherds of this country and their shepherding has yet been published. It can hardly be said that *Shepherds of Britain: Scenes from Shepherd Life Past and Present* (Constable & Co.), although it covers a good deal of ground, is in any way a full or final treatment of the subject. It is, rather, a sympathetic collection of passages from various writers who have described or

discussed the art and craft of the shepherd and his dog. As an anthology it does not profess to be encyclopædic, but we were disappointed to find no quotation from 'Owd Bob,' a book which is a classic of its kind. Mrs. Gosset quotes the case of some Cumberland sheep which were observed attacking a young rabbit; she might have added that rats have been known to turn the tables and slay lambs.

The book is illustrated by some charming photographs; that, for instance, which illustrates the congenial subject of a shepherd "mothering" a lamb is a beautiful composition. On this subject mention might have been made of the shepherd's device for inducing a bereaved ewe to foster an orphan lamb by draping it in the skin of the dead one. There are chapters on the wool-harvest, shepherds' garb, pastimes, and pastoral folk-lore, and the book constitutes an agreeable anthology upon one of the most ancient of English industries.

Timothe Bright, Doctor of Phisicke: a Memoir of "the Father of Modern Shorthand." By William J. Carlton. (Elliot Stock.)—Dr. Bright has not only an interest for those of the writers of shorthand who care for the history of their subject, but he is also connected with the bypaths of Shakespearean criticism in several ways. In the first place, his invention, published in 1588, was applied in 1589 to the reporting of sermons, and the first of these, presumably printed in that year for Windet, was reprinted some years later by Valentine Sims. But this same printer issued four of the Shakespeare quartos: therefore, the suggestion is, these plays were taken down in shorthand. Unfortunately, none of these quartos is suspect; and those that are—'The Merry Wives of Windsor' and 'Henry V.'—show no signs of shorthand, but rather of memory aided by an actor. The second clue is no better: a tradition grew up in Germany that the shorthand manuscripts of Bright concerned Shakespeare, and the German Shakespeare Society in 1900 urged the International Shorthand Congress to publish them in facsimile. None of them has the least reference to Shakespeare or his works—one of them is the Epistle to Titus. A third makes Bright one of the numerous pseudonyms of Francis Bacon, his 'Treatise on Melancholy' being obviously a trial piece for the later 'Anatomy of Melancholy,' published under the name of Burton—both of them containing ciphers. Mr. Carlton deals with these absurdities at sufficient length, and has done more valuable work: he has traced the career of his subject from birth to burial, fixing dates and places which were before his researches unknown or uncertain, and gathering up with pious care every scrap of information that could throw light on Bright's history or character. He has made an interesting and valuable book from materials that seemed, before his labours, somewhat scanty.

Dr. Bright's preliminary system of shorthand, as shown in the specimen preserved in the Burghley papers, exhibits traces, so far as the arbitrary signs are concerned, of the abbreviations used in mediæval manuscripts; but these disappear in his final system as published in 1588 in his 'Characterie.' In this he provided an alphabet and some 537 arbitrary signs for words, all of which had to be learnt by heart. When these were known, each sign could be used for a class of words. The sign for "sing" written with an *h* before it was used for "hymn." Of course the memory had to be relied on; "bird" with *s* before it stood for "swan," but might be read "swallow,"

"stork," &c. It would be interesting if some of the plays (other than Shakespeare's) suspected of being taken down in shorthand were examined from this point of view.

The other works of Bright, though of some importance in his own time, have little interest for readers of the present day. Their bibliography is given by Mr. Carlton in five pages of small print for those who will read them. Bright was an unsuccessful man, a failure as a physician, dismissed from his post at St. Bartholomew's Hospital, a failure as a parish clergyman, and driven to find a refuge and die in a distant county. His system of shorthand was superseded and dead within fifteen years, and his medical books had but a comparatively short popularity. But with all this, his is a name that will live, and Mr. Carlton's biography, written in a spirit of judicious hero-worship, is a worthy memorial of the father of English shorthand.

MR WILLIAM GRAHAM'S interesting and well-filled volume, *The One Pound Note in the History of Banking in Great Britain* (Edinburgh, James Thin), contains a curious chronicle of the early history of banking in Scotland, and its main object is to explain, as the title states, the position of the one-pound note in Great Britain. That it is the second edition, "issued," as the author tells us, "in response to many requests," proves the genuine interest taken in the subject. We confine our remarks to the theme to which the book is mainly devoted—the influence which the note issue has had on the establishment and the success of banking north of the Tweed. Mr. Graham explains this at great length, and describes its utility with the devotion of a fervent admirer.

That the one-pound note is very convenient in Scotland and in Ireland is well known, but we cannot agree with Mr. Graham that very small notes would be of use everywhere. Thus the Bank of France had in 1872 a circulation of nearly 4,500,000*l.* in notes of 25 francs (1*l.*), of nearly 21,500,000*l.* in 20-franc notes (16*s.*), together with 5-franc notes in value over 4,000,000*l.*, but in a few years they were virtually all withdrawn. Tradition says that the Bank paid all the small notes presented, whether forged or not. Be this as it may, they have not been continued. Experience appears to show that small notes, when issued at all, are best issued by comparatively small banks, who are constantly exchanging their notes with each other, and can thus keep a sharp eye on fraud. They answer well in Scotland, but it would, we think, be a misfortune to England if they were employed here. The rule of thumb that "the note should not be of the value of the unit of the currency" applies to this, as there is the great risk of the gold circulation of the country—a valuable resource in time of pressure—being dangerously reduced by their use.

We part from Mr. Graham with the feeling that, while he has made a powerful defence for the small-note issue in Scotland, he has not shown sufficient grounds for its use elsewhere. If we may venture to quote a Scotch proverb to a Scotchman, we will conclude with the one which reminds us of the wisdom of "letting sleeping dogs bide."

THE PAGEANT OF LONDON.

MR. FRANK LASCELLES is to be congratulated on the results of his long preparations for a Pageant on a far larger scale than anything hitherto attempted.

The Pageant was opened on Thursday by Prince Arthur of Connaught, and gives promise of an assured success throughout June and July. Its aim is to set forth the evolution of the English people as demonstrated in the development of the central city of the kingdom and the empire, from the days immediately preceding the arrival of the Romans down to the entry of the Allied Sovereigns at the close of the Twenty Years' War. The episodes selected for this purpose are so numerous that the whole story is divided into three parts, presented on as many successive days, whilst a fourth part is devoted to Greater Britain, and her establishment as a ruling power in Newfoundland, Australia, South Africa, New Zealand, Canada, and India.

The arena chosen for this great series of stirring realistic pictures is a happy choice. A considerable section of the most beautiful and best-wooded parts of the extensive grounds of the Crystal Palace has been fenced in for the purpose. The vast amphitheatre, capable of seating with ease an audience of 10,000, faces a wide stretch of open grass intersected by roads, flanked by growing timber, and glowing here and there with banks of rhododendrons. At a little distance is a sheet of water which plays an important part in a large proportion of the episodes; it is spanned by a bridge, cunningly contrived by a variety of scene-shifting arrangements to represent London Bridge under many changing forms. It is, in short, an ideal place for the presentation of great processions, acclaiming crowds, or gallant struggles, as well as more peaceful incidents. The one drawback to the site is that the great size of the arena or stage has a tendency to dwarf the number of the actors, so that occasionally the "crowds" look meagre, and the number of men-at-arms somewhat small, although, as a matter of fact, the performers reach a total in all the parts of 15,000.

The zeal with which all sorts and conditions of men have thrown themselves into the production on so large a scale of this national drama is remarkable and satisfactory; not only are many members of titled families and civic officials of various London boroughs taking part as performers, but leading historians and men of letters of the day have also taken much trouble to ensure accuracy of detail and costume throughout the multiplicity of periods represented. The historical referee for the opening scene, termed 'The Dawn of British History,' was Sir Laurence Gomme; Prof. Oman held a like responsibility for London in Roman days and during the time of Alfred; Prof. Collingwood, Mr. A. Major, and Mrs. Magnusson were the referees for the stirring incidents of the battle of London Bridge between the Danes and the English under Edmund Ironside and Olaf of Norway; Mr. Thomas Secombe was responsible for 'The Going Out of Harold and the Entry of William,' and Mr. G. J. Turner for the later incidents of the welcome accorded to Cœur de Lion on his return from captivity, and of the investiture of the Prince of Wales. Mr. Egerton Beck has had the chief arrangement of the wonderfully complete ecclesiastical processions which received the fragment

of the Holy Cross at Westminster in 1285, and the Coronation Stone and Regalia from Scotland in 1297, the performers being supplied by Westminster Cathedral; whilst Mr. Armitage Smith was responsible for the manifold details of the Tournament at Smithfield with which the first part of the Pageant concludes.

The second part opens peacefully with the assembling and setting forth of the Canterbury Pilgrims from the Tabard Inn of Southwark, for which Mr. A. W. Pollard acted as referee; for the noise and tumult and rapid riding of the Wat Tyler episode Dr. J. H. Wylie occupied a similar post; Mr. Hubert Hall for the departure of Richard III. and the entry of Henry VII., and Prof. Egerton for the days of early discoveries when John Cabot was presented to the King. The joyful interlude of May Day revels in the Tudor times had its setting arranged by Lady Gomme and Mr. C. J. Sharpe. Dr. Gairdner, the well-equipped historian of the days of Henry VIII., gave his services to secure the due representation of the *entente cordiale* of the Field of the Cloth of Gold; whilst another historian, Mr. Julian S. Corbett, was referee for the knighting of Drake and the review at Tilbury during the spacious days of Elizabeth.

The third part opens with a scene illustrating trade with the Indies, presented under the advice of Sir Richard Temple. The departure of the Pilgrim Fathers and the presentation of the Princess Pocahontas at the Court of James I. have been cleverly marshalled by Mrs. Lomas of the Public Record Office, as well as a pathetic little scene picturing the home life of Charles I. Mr. H. B. Wheatley acted appropriately as referee of the scenes, both joyous and sad, of the days of Charles II. Mr. I. S. Leadam advised as to the episode of the dispatches announcing the capture of Quebec and the death of General Wolfe, Mrs. Lomas for St. Bartholomew's Fair in 1762, Mr. Carr Laughton for Capt. Cook sailing from the Thames, and Dr. J. Holland Rose for the procession of the Allied Sovereigns to the great banquet at the Guildhall.

Experts of eminence on the story of our great colonies have advised in the fourth part: Mr. Beckles Willson for Newfoundland and Canada, Mr. Frank Fox for Australia, Mr. I. D. Colvin for South Africa, and Mr. T. E. Donne for New Zealand; whilst Col. Hendley has been the chief adviser on the Empire of India.

Among the artists who have looked after the costumes may be mentioned Mr. Walter Crane, Mr. Seymour Lucas, Mr. Fred Roe, and Mr. Byam Shaw.

As to music, the advisory committee includes such distinguished men as Sir Walter Parratt, Sir Hubert Parry, Dr. W. H. Cummings, and Dr. F. H. Cowen. Wherever possible, contemporary music has been used by the composers for the various scenes. Mr. W. H. Bell is director of the Pageant music, and produced admirable results in the first part on the opening night. In addition to Mr. Bell, the following have composed or arranged the music for the different incidents or episodes: Messrs. Frank Tapp, Edward German, Cecil Forsyth, Gustav von Holst, Paul Corder, and Haydn Wood.

The success of a Pageant, especially when on so large and prolonged a scale as the present one, depends much upon the horses and horsemanship. The horses are well-chosen and in good condition, whilst the riding is for the most part a creditable

display: nor is this to be wondered at when it is remembered that three excellent judges of horseflesh form the Pageant Horse Committee, namely the Earl of Lonsdale, Lord Willoughby de Broke, and Lord Annaly, the well-known master of the Pytchley Hunt.

Besides the scenes we mention there are the latter parts of the Pageant, especially the concluding Masque Imperial and the Pageant of the Gain of Empire. Meanwhile the rendering of the episodes of the first part on the opening night was all that could be desired. The first scene was picturesque and fascinating. The London of the dawn of actual history is but a settlement of pile dwellings at the junction of the Fleet and the Thames, with an open space in the midst of surrounding woods. Here dwells a small peaceful settlement of the ancient Britons, following for the most part pastoral occupations, amidst their horses and cattle, and herding their sheep and goats. Everything appears to be correct, and forms a striking contrast to certain early episodes of the Pageants of the last few years. For instance, we have seen more than one Pageant wherein Queen Boadicea makes an exciting and imposing entry in a chariot drawn by great steeds of the size of shire horses, yet of most mettlesome breed. But in this Pageant of London the horses are rightly of ponylike proportions. The excited entry of some fallow deer gives zest to the scene, and ancient and modern blend when it is whispered among the spectators that these half-tamed deer are lent by the Duke of Marlborough from Blenheim Park. In the foreground stands a Druidical temple, whose priests make a stately show in white garments, forming and reforming into processional rings within and without the great upstanding monoliths. Boys are bathing in the waters of the stream or paddling their coracles, whilst maidens in simple robes of varying shades of blue dance gleefully on the sward. But soon a weary messenger arrives, the flocks and herds are driven into the shelter of the palisades, and women and children are sent into their homes, whilst the skin-clad men rush off to enter into the conflict. But the bold, wild daring of the Celts does not obtain them the victory; the discipline and arms of the advancing Romans prove superior, and with measured tread the conquering forces enter, a last desperate struggle ensues, and Cassibelaunus is vanquished.

The next scene is admirably rendered. Roman walls have taken the place of Celtic palisades; a temple of Diana, from the portals of which issue graceful ranks of priestesses, has succeeded to the rude circles of Druidic worship; and the populace join in hearty congratulations on account of the naval victories of "the gallant usurper Marcus Aurelius Carausius, the first seaking who based his navies on Britain's shores."

The days of Alfred are celebrated in a striking scene, at the period when he had sent expeditions to explore the Northern seas, and at the same time dispatched an embassy to offer England's greetings and alms to the Christians of the far East. It will not be easy for those who witness this episode to erase from their memory the striking spectacle of the tribute of valuable skins and furs brought to the feet of Alfred the Great from the Arctic and Baltic seas, or the return of the messengers from the East, bringing with them, as for a second Solomon, gifts of ivory, apes, and peacocks.

The spirited scenes of the firing of London Bridge in the days of Edmund Ironside and

Olaf of Norway; the parting of Harold from his mother, and his going forth to the fatal field of Senlac; the triumphant entry of the Conqueror into London, and the genuine but surly submission of the city; the welding of English and Norman into a common nation, as shown on the occasion of the entry into London of the great-hearted Richard I.; the vigorous days of Edward I. with their stately ecclesiastical processions; and the great tournament of Smithfield, attended by Edward III., Queen Philippa, the Black Prince, and the captive kings of France and Scotland, a striking evidence of London's greatness in the fourteenth century, were one and all worthily rendered and heartily received.

THE DILKE KEATS COLLECTION: A QUESTION OF HANDWRITING.

4, York Mansions, Battersea Park, S.W., June 3, 1911.

MR. BUXTON FORMAN's letter about the Keats books of the late Sir Charles Dilke is of much interest, and the greatest respect is due to all that he writes on anything connected with the poet.

May I, however, say that nothing in his letter shows that the book was not "Keats's own copy" of 'Endymion,' and that there is nothing to prove that the Milton did not at one time belong to Keats? I believe that Sir Charles Dilke received both volumes from his grandfather, who was certainly in a position to know whether they formerly belonged or did not belong to Keats.

Mr. Buxton Forman says that

"there can be no doubt that the note of Sir Charles Dilke on which the cataloguing of the 'Endymion' was based, was written at a time when the late owner had become convinced that the script in which the minor poems are written was the 'copying hand' of Keats."

As long ago as 1875, in 'Papers of a Critic,' Sir Charles Dilke wrote that he had

"still in his possession a great number of Keats' letters;—his Ovid, his Shakespear.....and Keats' own copy of 'Endymion,' with all the sonnets, and many of the other poems copied in on notepaper pages at the end, in Keats' writing."

This was before the time when Mr. Buxton Forman worked on the book, and was only eleven years after the death of Mr. C. W. Dilke, who was described as a "living catalogue" who "knew every book" in his library.

With regard to the MS. poems in the 'Endymion,' Mr. Buxton Forman is now clear that they are not in the handwriting of the poet. But I venture to point out that when Mr. Buxton Forman was preparing his large edition of Keats, and when he had this copy of 'Endymion' in his possession and examined it with that minute care for which he is celebrated, he wrote as if he thought that the manuscript was Keats's. From that MS. he corrected the text of Keats; and his volumes are full of footnotes which suggest that at that time he had no doubt on the point.

I will quote only one of Mr. Buxton Forman's many notes. At p. 237 of vol. ii., on the Sonnet to Homer, he writes:—

"This admirable sonnet also occurs in manuscript in Sir Charles Dilke's copy of 'Endymion,' and was included, like the preceding, in the Literary Remains. The date given in both places is 1818. The evidence of the manuscript on this point is of consequence.....The text given above is that of Sir Charles Dilke's manuscript, in which, however,

the word *spumy* in line 7 is altered to *spermy* in what seems to me to be the handwriting of Mr. Dilke, the grandfather of the present Baronet."

It is certain that Mr. Buxton Forman, when he worked on the volume, thought that the handwriting of the MS. was, at any rate, not that of Mr. C. W. Dilke.

It is known, and is, indeed, made clear by Mr. Buxton Forman's notes, that Lord Houghton also altered the text of Keats and made corrections from the MS. in Sir Charles Dilke's volume.

I wish that Mr. Buxton Forman had tried to clear up the facts about Keats's "innocence of spelling." The note as to the "innocence of spelling" is not in the "upright hand" of Mr. Dilke, with which Mr. Buxton Forman "was already familiar"; but is, without any doubt, in the hand of Sir Charles Dilke. The puzzling point about the spelling is that there are many words misspelt in the MS. poems; that it is known that Keats did make mistakes in spelling; and that no one has ever suggested that Charles Wentworth Dilke, the critic, could not spell. Like Mr. Buxton Forman, I have before me letters in the handwriting of Sir Charles Dilke's grandfather, and I am by no means satisfied that the MS. poems are in Mr. Dilke's hand.

Mr. Buxton Forman's authority on the poetry of Keats is unquestionable. But here it is (to use the heading of his letter) "a question of handwriting"; and he has at different times held different opinions as to the writing now in dispute. In his present letter he has mistaken the handwriting of Sir Charles Dilke for that of Charles Wentworth Dilke, the friend of Keats, with which, he tells us, he is "familiar"; and on the "question of handwriting" I fear that I cannot accept Mr. Buxton Forman as a safe guide.

H. K. HUDSON,
Ex'or of the late Sir Charles Dilke.

THE BUTLER LIBRARY.

ON Monday, May 29th, and the three following days Messrs. Sotheby were engaged in selling the second portion of the library of the late Mr. Charles Butler. The chief prices realized were the following:—

Æsopus, Apologi, 1501, 27l. Antiphonale, MS., Italian, late 15th century, 15l. Ascham, The Scholemaster, 1570, 15l. Bible in Latin, printed at Strasburg, n.d., 29l.; another, printed by Koberger in Nuremberg, 1480, 17l. 10s.; in German, printed by Koberger, 1483, 38l. Bidpay, Directorium Humanæ Vitæ, n.d. (c. 1484–1485), 16l. Boccaccio, De Mulieribus Claris, editio princeps, 1473, 51l.; the same, 1487, bound up with Caoursin, Rhodie Obsidionis Descriptio, n.d., 40l.; Boccaccio, De la généalogie des Dieux, 1531, 16l. 10s. Breviary, English, 14th century, 60l. Champier, Recueil des Hystoires des Royaumes d'Austrasie, 1510, 30l. 10s. Chartier, Faits, Dictes, et Ballades, n.d., 24l. 10s. Chaucer, Workes, 1561, 15l. 15s. Chippendale, Cabinet-maker's Director, 1755, 21l. 10s. Cicero, Orationes Selectæ, Venice, 1471, 22l. Cornelius Nepos, De Vita Excellentium Liber, 1471, 26l. Coryat, Crudities, 1611, 19l. Dante, Commedia, 1477, 20l.; the same 1491, 22l. 10s.; the same, 1497, 19l. Dialogus Creaturarum, 1480, 15l. 10s. Fasciculus de Medicina, 1522, 17l. 10s.; another copy, 17l. 15s. Gellius, Noctes Atticæ, 1472, 20l. Geminus, Anatomia delineatio, 1545, 21l. Hieronymus, Epistolæ et Tractatus, 1468, 21l. 10s. Horæ B.V.M. ad usum Romanum, MS. French, 15th century, 16l. 10s.; another, Flemish, 15th century, 25l.; secundum usum Sarum, 1536, 17l. 10s. Hortus Sanitatis, 1491, 16l. Instrumenta Chirurgiæ, c. 1564, 20l. Juglar, Christus Jesus, 1642, in a Le Gascon binding, 15l. La Fontaine, Contes et Nouvelles, 2 vols., 1762, 47l.; Fables et Nouvelles, 6 vols., 1765–75, 58l. Le Maire,

Illustrations de Gaule, 3 vols. in 1, 1531, 15l. 5s. Loris and De Meung, Rommant de la Roze, 1531, 16l. Marguerite de Navarre, Heptameron, 3 vols, 1780-81, 20l. 10s. Missale ad usum ecclesiae Sarisburiensis, 1555, 27l. Opera Nova Contemplativa, c. 1510, 18l. Pliny, Naturalis Historia, 1472, 29l. Book of Common Prayer in Irish, Dublin, 1608, 30l. Scriptores de Re Rustica, 1533, 36l. Shakespeare, First Folio, imperfect, 1623, 98l.; Second Folio, 1632, 43l. Sidney, Arcadia, 1588, 23l. 10s. Le Songe du Vergier, n.d. (c. 1500), 19l. Speculum Passionis, 1507, 15l. Villanova, Tresor des Pouvres, 1512, 21l. Viola Sanctorum, n.d., c. 1482, 18l. The World, 6 vols., 1755, Horace Walpole's copy with his MS. notes, 28l. Ysaie le Triste, n.d. (1540), 27l. The total of the four days' sale was 3,190l. 5s.

AUTOGRAPH SALE.

ON FRIDAY, the 2nd inst., Messrs. Sotheby held a sale of autograph letters in which were included the following: Pius IX., nearly 200 letters, 37l.; Haydn, three-page letter to Madame Polzelli, Jan. 14, 1792, 49l. Benjamin Franklin, letter to M. Dechaumont, May 19, 1779, 15l. 10s.; two letters to G. Clinton, Sept. 22, 1787, 18l. 10s. Marquis de Lafayette, about 110 letters, 90l. Frederick the Great, three-page letter, Aug. 27, 1734, 45l. Washington, two-page letter to S. Powell, May 25, 1786, 65l. Byron, six-page letter to Octavius Gilchrist, Sept. 5, 1821, not printed by Mr. Prothero, 26l. Nelson, 3½-page letter to Rear-Admiral George Campbell, May 10, 1805, 18l. Louis XIV., three-page letter to Charles II., May 7, 1678, 17l. 10s. Murat, four-page letter to Napoleon, May 20, 1808, 22l. The total of the sale was 908l. 3s. 6d.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Coptic Palimpsest, containing Joshua, Judges, Ruth, Judith, and Esther, in the Sahidic Dialect, 21/ net.

Edited by Sir Herbert Thompson.

Gurnhill (Rev. J.), Some Thoughts on God and His Methods of Manifestation in Nature and Revelation, 4/ net.

Houghton (Rev. C. A.), Problems of Life, 3/ net.

The author accepts the Creeds of the Church, but in these essays looks at new aspects of truth as they are presented from time to time to man.

Oesterley (Rev. W. O. E.), Life, Death, and Immortality: Studies in the Psalms, 3/6 net.

Sanday (William), Personality in Christ and in Ourselves, 2/ net.

Sinclair (Rev. John), Bible Beginnings: a Plain Commentary on the First Eleven Chapters of Genesis, 5/

With a short preface by Prof. Sayce.

Steep Ascent (The): Memorials of Arthur Heber Thomas and Records of the Rainnand Mission, S.P.G., 1532-1911, by F. G. F. T., 3/6 net.

With prefatory note by the Hon. Mrs. Gell and 22 illustrations. Cheap edition.

Law.

Ranking (D. F. de l'Hoste) and others, Partnership Law, 6/ net.

Shaw of Dunfermline (Lord), Legislature and Judiciary, 2/ net.

A reprint of an address delivered on November 22nd last at the opening of a course of Jurisprudence at University College, London.

Fine Art and Archaeology.

Auvergne (Edmund B. d'), Famous Castles and Palaces of Italy, 15/ net.

With 16 illustrations (some in colour) from paintings.

Boisbaudran (Lecoq de), The Training of the Memory in Art and the Education of the Artist, 8/ net.

Translated by L. D. Luard, with an introduction by Selwyn Image.

Foley (Edwin), The Book of Decorative Furniture, Section XII., 2/6 net.

For notice of Vol. I. see *Athen.*, Dec. 17, 1910, p. 771.

Hind (C. Lewis), The Post-Impressionists, 7/6 net. With 24 illustrations.

Hundred Best Houses, 1/ net.

A guide to the exhibition of Town-Planning and House-Building opened on the 1st inst. by Mr. John Burns at Gidea Park, near Romford. It contains plans and sketches of the 150 houses and cottages erected on the Gidea Park Estate by 100 architects.

Ludovici (Anthony M.), Nietzsche and Art, 4/6 net.

With 8 illustrations.

Poetry and Drama.

Bierce (Ambrose), Collected Works: Vol. VI. The Monk and the Hangman's Daughter, Fantastic Fables.

Bourchier (Arthur), Some Reflections on the Drama—and Shakespeare, 1/ net.

A lecture delivered (at the invitation of the Vice-Chancellor) in the Examination Schools of Oxford University on Friday, February 3.

Cashmore (Alfred H.), The Garden Sundial, and Ovingdean, 1/ net.

Three poems, the third being 'Sweet Peas: a Coronation Souvenir.'

Kaluza (Max), A Short History of English Versification from the Earliest Times to the Present Day, 5/ net.

A handbook for teachers and students, translated by A. C. Dunstan.

Kislingbury (P. J.), Cornwall, the English Riviera: a Poem, 2/6 net.

Lorraine (Elsa), Brocade: Sonnets, 2/6 net.

More (Hannah), Percy: a Tragedy in Five Acts, 2/ net.

With preface and notes. A reprint of Hannah More's tragedy acted at Covent Garden.

Norman (Ida), Songs of the Birds, 1/

In the Vigo Cabinet Series.

Nunn (Harold), The Humble Tribute: Ballades and other Verses, 2/6 net.

The work of a young Indian Civil Servant who died some two years ago in the Central Provinces of India. The volume has a preface by Prof. T. H. Warren of Oxford.

Sonnets by Lucilla, 2/6 net.

Steven (Alex. Gordon), The Witchery of Earth,

A collection of poems, some of which have appeared in Australian magazines.

Wessex (John), A Masque of the Seasons, 1/ net.

Songs, music, and dances arranged by Oriska V. and Rosalind Fuller.

Bibliography.

Boston City, Fifty-Ninth Annual Report of the Trustees of the Public Library.

Chelsea Public Libraries and Museums, Annual Report of the Committee for the Year ending March 31.

Literary Gossip.

THE CAMBRIDGE UNIVERSITY PRESS will publish very shortly the Commentaries on the Four Gospels of the famous Nestorian father Isho'dad of Merv, Bishop of Hadatha c. 850, edited and translated by Mrs. Margaret Dunlop Gibson, forming three volumes (Nos. 5, 6, 7) of '*Horæ Semiticæ*.' Vol. I. will contain the translation, with an Introduction by Dr. J. Rendel Harris; also a list of agreements between Isho'dad's quotations and the Old Syriac, and a list of coincidences between Isho'dad and Theodore of Mopsuestia. The other two volumes will contain the Syriac text.

MR. JOHN MURRAY will publish shortly '*The Legacy of Past Years: a Study of Irish History*,' by Lord Dunraven; and yet another story of the French Revolution, '*Chantemerle*.'

MR. HEINEMANN will publish next week a new novel by Sybil Spottiswoode, entitled '*Her Husband's Country*.' The previous books by this lady—'*Marcia in Germany*' and '*Hedwig in England*'—appeared anonymously, and achieved much success. The present book is a study in international marriage, treated with a sense of humour.

WE regret to hear of the death last Wednesday week of Dr. John Campbell Oman, who was formerly a Professor in the Government College of Lahore and Principal of the Sikh College at Amritsar. He was specially interested in the religions of India, and wrote '*The Great Indian*

Epics,' '*The Mystics, Ascetics, and Saints of India*,' '*The Brahmans, Theists, and Muslims of India*,' and '*Cults, Customs, and Superstitions of India*.'

THE DUKE OF NORFOLK as Earl Marshal, with the approval of the King, has authorized Mr. H. Farnham Burke, the Somerset Herald, to prepare an historical record of the Coronation of King George and Queen Mary.

AN exhibition selected from the Typographical Library of the St. Bride Foundation, illustrating the history and processes of printing in colours, will be held in the large hall of the Foundation, Bride Lane, E.C., on Wednesday and Thursday next. It will be open to the public without tickets after two o'clock on Wednesday, and all day on Thursday.

MESSRS. A. & F. DENNY's List of Cheap Books, issued in May each year, is excellent for reference, and always of interest as an indication of popular tastes. Good fiction in abundance is now to be had in Messrs. Nelson's sevenpenny library, and similar issues by other firms which followed their lead.

THE sixpennies in paper covers probably represent what is most widely read. Here Mr. Garvice, who had 6 titles of books to his name in 1908, now has 53; Effie Adelaide Rowlands, unrepresented, we are told, in 1909, has 30; but all living writers are headed by the sporting novelist, Mr. Nat Gould, with 60, and of the great of the past, Dumas only with 59 entries (some double volumes) surpasses his popularity.

THE editor of '*The Irish Book Lover*' writes:—

"Mr. William Holloway in your issue of May 27th (p. 603) jumps to conclusions rather hastily. Your reviewer is not to blame for the attribution of the classic saying '*O Liberty*' to Charlotte Corday. The delinquent seems to me to be Dr. Murray, the author of '*Revolutionary Ireland*,' who quotes it at p. 32 of that work as being '*uttered*' by Charlotte. Had your reviewer been omniscient, he might have pointed out the error, and so saved Mr. Holloway from casting blame on the wrong person."

We noticed the point, but did not think it worth while to mention it. As a matter of fact, the saying is Charlotte Corday considerably improved.

THE death in his 55th year is announced from Erlangen of Dr. Paul Ewald, Professor of New Testament Exegesis at the University of that town, and author of a number of valuable works, among them '*Verhältnis der systematischen Theologie zur Schriftwissenschaft*,' '*Glaubwürdigkeit der Evangelien*,' and '*Der Kanon des Neuen Testaments*.'

RECENT Parliamentary Papers of some interest include: Report on Education in Scotland, 1910-11 (post free 4d.); and Ancient Monuments and Historical Buildings Report (post free 3½d.).

SCIENCE

OUR LIBRARY TABLE.

Imperial Telegraphic Communication. By Charles Bright. (P. S. King & Son.)—This volume consists mainly of lectures and papers delivered to various audiences or printed in various periodicals between 1898 and April, 1911, and contains inevitably a considerable amount of repetition.

Nevertheless, it makes a timely appearance in view of the Imperial conferences now being held, for it treats of the whole subject of intercommunication between the mother country and the various colonies and dominions.

Mr. Bright's chief points are that we have no means of telegraphing to the outlying parts of the Empire, except by cables some portions of which are in the control of other nations. We must have an all-British line to Canada and duplicate lines, by different routes, to those parts which are already in direct communication. He regards adequate cable service as essential, not only on strategic grounds in time of war, but also as a means of promoting inter-Imperial commerce. The State must, he suggests, provide such lines as are unlikely to be undertaken by private enterprise on account of lack of sufficient traffic, and finally, the various cables should be brought under uniform direction.

Mr. Bright is naturally biased to some extent in favour of cables, but points out certain cases in which the "wireless" system has advantages over the metallic circuit. He predicts great increases in the use of the cables as wireless services become extended and multiplied.

An Appendix gives the cable word-rates between various parts of the globe. There is a chart of the world's telegraphic systems both by land and by submarine cable, showing the lines projected as well as those already working. The all-British lines are distinguished from those under alien control, by which it may be seen to what extent, telegraphically, we are at the mercy of our potential foes.

The Nature-Lover's Handbook. By Richard Kearton and others. (Cassell & Co.)—This is a useful little *vade-mecum* compiled by several hands, and containing notes for the various months and several valuable tables. The plan has been to devote a few pages to the observations of each month, allotting to Mr. Kearton the birds, to Mr. J. J. Ward butterflies and moths, to Mr. Purefoy Fitzgerald wild flowers, to Mr. Henry Irving trees, and to Mr. Bensusan mammals and reptiles and bees. Outside those named insects have no place here. The work has been well done in each case, and offers serviceable hints to lovers of nature afield. The tables include a schedule of birds, nests and eggs, one of butterflies and moths, one of wild flowers, and one of trees. The entomological list is laudably comprehensive, and runs to just under 100 pages. This, which we have no doubt is the work of Mr. Ward, should be invaluable to collectors.

Our Insect Friends and Foes. By F. Martin Duncan. (Methuen & Co.)—In this volume Mr. Duncan has written an interesting account of a number of typical insects with their life histories, which should prove a welcome publication to the increasing

number of nature lovers and readers. The records, if not altogether original, have been gleaned with considerable discrimination, and the author acknowledges that outside his own sphere of observation he has not hesitated to avail himself "of the confirmatory and wider investigations of leading authorities on this fascinating subject." It is, however, somewhat incongruous to find scorpions and spiders included in "insect friends and foes."

Plate I affords an illustration of the Indian leaf-butterfly (*Kallima inachus*), frequently referred to as *K. inachis*, but never *inaches* as written in this volume. This butterfly is one of the oldest recognized examples of protective mimicry, but Mr. Duncan's illustration follows others in picturing the butterfly as resting with its head upward, and has so described its position in his text. This, however, has been denied by local observers who have stated that the contrary position—head downward—is usual.

The other illustrations are much more satisfactory, and merit praise. The book cannot be considered of importance to the expert, and the authorities consulted might with advantage have been more fully given. The standard treatises on this subject by Kirby and Spence afford a better example in this respect.

Regimen Sanitatis, the Rule of Health: a Gaelic Medical Manuscript of the Early Sixteenth Century or Perhaps Older, from the Vade Mecum of the Famous Macbeaths. By H. Cameron Gillies. (Glasgow, MacLehose & Co.)—Dr. Cameron Gillies issues a photographic reproduction of an old Gaelic manuscript with a carefully executed translation, a translation, notes (which are illuminating), and a glossary. The Gaelic text exists at the British Museum in the form of 62 vellum folios which Dr. Gillies dates provisionally as being "of the early sixteenth century (though) I feel that it would be even safer to say the fifteenth century instead." The manuscript is a good specimen of Scottish Gaelic. It was a notebook or *vade mecum* which originally belonged to the MacBeaths or Betons of Islay and Mull, hereditary physicians for several centuries to the Lords of the Isles and to the Kings of Scotland. The various members of the family appeared to have stored their reading and added comments and observations based on personal experience until one of a later generation gave the results to be copied and digested by two professional Irish scribes who knew nothing of medicine and were perhaps brothers. The work naturally does not add much to the sum of medical knowledge. It shows marked evidence of the influence of the school of Salerno and also that the MacBeaths had a good medical library. It is valuable as a sign of the increasing interest taken by medical men in the historical side of the profession, and Dr. Gillies deserves their hearty thanks for the production of a volume which has entailed much work even though it has been a labour of love. It is dedicated to John, fourth Marquis of Bute.

THE ROYAL OBSERVATORY,
GREENWICH.

THE annual Visitation of the Royal Observatory was held on Friday, the 2nd inst., and the Astronomer Royal, Mr. F. W. Dyson, presented his first Report to the Board of Visitors, of which Sir Archibald Geikie was chairman as President of

the Royal Society. The practice of presenting a report of the work accomplished during the previous year was initiated by Airy just seventy-five years ago, in June, 1836, the first meeting of the Board after his appointment; but the size of the Report has greatly increased since then, owing to the number of additional buildings, instruments, methods of observation, and departments of work which the progress of astronomical science has made it necessary to introduce.

The present report relates to the twelve months which ended on the 10th of May last. Up to October 1st the observations were under the superintendence of Sir William Christie, who resigned on that day after succeeding Sir George Airy in August, 1881. Alterations and additions to the Astronomer Royal's official residence are now in progress. The dome which contained the old altazimuth has been altered to render it suitable to hold the Dallmeyer photoheliograph. The transit-circle has been, as usual, in constant use. Two slight changes have been made: parallel wires instead of cross wires have been substituted in the reading microscopes, and an alteration effected in the mounting of the object-glasses of the microscopes in order to simplify the operation of focussing.

The sun, moon, large planets, and fundamental stars have been regularly observed, as in previous years. Other stars observed (according to a programme begun in 1906) are those of the ninth magnitude and brighter (over 12,000 in number) between the limits of 24° and 32° of north declination, including also about 110 fainter stars in parts of the sky where bright stars are not sufficiently numerous; and, in order to facilitate comparison of the catalogue with the fundamental system of the Comité International Permanent, six stars from Newcomb's fundamental catalogue have been observed each night when practicable since January 1st. The mean error of the moon's tabular right ascension for 1910 derived from observations with the transit-circle is—0^h 54.3, which is about 0^h 12 greater than in the preceding year.

A new mercury-trough running on rails has been supplied for the altazimuth. That instrument is used as a reversible transit-circle during the second and third quarters of each lunation; and observations of the sun, moon, large planets, and fundamental stars have been made with it throughout the year, also extra-meridian observations of the moon during the first and last quarters of each lunation, and reference stars for a series of photographs of Mars taken with the Thompson equatorial between July 23rd, 1909, and May 14th, 1910. Observations of the lunar crater Mösting* A were made regularly; and simultaneous observations obtained at Greenwich and the Cape between January, 1905, and December, 1910, have been discussed for determination of the moon's parallax.

The work on the ten-year catalogue of stars observed with the altazimuth in the meridian from 1899 to 1908 is in progress.

Observations of stars passing near the zenith have been obtained with the reflex zenith-tube, and results from those of previous years have been discussed by Mr. Eddington. Regarding the variation of the latitude, a fair agreement is shown with the results of the International Latitude determinations published by Prof. Albrecht.

Equatorial observations have been actively pursued, casual phenomena being observed

* This object near the visible centre of the moon was named from the Danish Finance Minister when the *Astronomische Nachrichten* was founded at Altona about ninety years ago.

with several instruments. An alteration had to be made in the driving-clock of the 28-in. refractor. Observations of double stars were made from a working catalogue containing all known doubles which show appreciable relative motion, and a number of pairs from the catalogues of Hussey and Aitken under 2" of separation. The 26 inch refractor of the Thompson equatorial has been employed chiefly in obtaining photographs for determining the parallaxes of stars in the Greenwich Astrographic zone. With the 30-inch reflector a number of photographs of Saturn and its ninth satellite, and of comets, particularly Halley's, have been obtained; also of several small planets and nebulae. Lately the astrographic equatorial has been chiefly occupied in taking photographs to determine the magnitudes of the stars whose co-ordinates and measured diameters are given in the two volumes of the Greenwich section of the Astrographic Catalogue which have been already published.

The photoheliograph has continued to be under the immediate superintendence of Mr. Maunder. From the beginning of May the observations of the sun have been begun at 7 o'clock in the morning, and it is proposed to carry on this arrangement until the end of August, and in September and April to begin at 8. The results up to 1909 have been printed, and those for 1910 are in the printer's hands. Lists of the sunspot groups, with their numeration, are published monthly in *The Observatory*, which is edited by Messrs. Lewis and Hollis. Solar activity in 1910 showed a great falling-off from 1909, though there were two short-lived revivals in the former year. It is evident that the sun is now rapidly approaching a minimum phase of activity.

The magnetic and meteorological observations have been regularly continued under the immediate superintendence of Mr. Bryant. The magnetic elements for 1910 were: mean declination, $15^{\circ}41'2''$ west; mean horizontal force, 0.18532; mean dip (with 3-inch needles), $66^{\circ}52'37''$. During that year there were no days of great magnetic disturbance, and only six of lesser disturbance.

As regards meteorological observations, the mean temperature for 1910 was $49^{\circ}.7$, or $0^{\circ}.1$ above the average for the 65 years from 1841 (when the record began) to 1905. For the twelve months ending on April 30th the highest temperature in the shade (recorded in the open stand in the Magnetic Pavilion enclosure) was $82^{\circ}.2$ on June 20th; the lowest was $21^{\circ}.6$ on February 1st. During the winter there were 43 days when the temperature fell to or below 32° , which is 13 days less than the average number.

The mean daily horizontal movement of the air during the same twelve months was 313 miles, which is 30 miles above the average of the preceding 43 years. The greatest recorded daily movement was 820 miles on December 16th, and the least 78 miles on January 20th. The number of hours of bright sunshine recorded in the above period by the Campbell-Stokes instrument was 1,300, out of 4,458 during which the sun was above the horizon, so that the mean proportion for the year was 0.292, constant sunshine being represented by 1. The rainfall (also for the twelve months ending April 30th) amounted to 25.93 inches, which is 1.81 greater than the average of the 65 years 1841-1905.

The volume of the Greenwich Observations for 1908 was distributed in January; that for 1909 is printed, and will shortly be

distributed. The printing of the investigation of the motion of Halley's comet by Drs. Cowell and Crommelin has been completed, and the results will be given in an appendix to the Greenwich Observations for 1909.

Some particulars respecting the chronometer and time-signal work are given. The Greenwich time-ball was not raised on three days (December 16th, February 22nd, and March 26th) owing to the violence of the wind.

The only change in the staff is the appointment of Mr. Chapman as one of the Chief Assistants (Mr. Eddington being now the senior) in consequence of the resignation of Dr. Cowell, now Superintendent of 'The Nautical Almanac.'

In his concluding remarks Mr. Dyson speaks of the continued increase in the various departments of the work, and the inconvenient size to which the annual volume has grown. He thinks it may be shortened by omitting some of the details of the steps of the reductions.

SOCIETIES.

BRITISH ACADEMY.—May 31.—Lord Reay in the chair.—The Chairman referred to the death of Sir Alfred Lyall, whose loss was a heavy blow to the Academy, of which body he was a most devoted member.

A paper was read by Prof. T. E. Holland, Fellow of the Academy, upon 'Proposed Changes in Naval Prize Law (the Prize Court Convention and the Declaration of London).' He pointed out that the attack and defence of these changes have hitherto turned much upon isolated points, but that the subject ought to be considered as a whole, and with reference to the interdependence of its parts, before conclusions are drawn as to the acceptability of either of the documents in question. To this task he proposed to address himself, prefacing his remarks by a tribute to the work of the authors of the Declaration, especially of Lord Desart and M. Renault; as also to the action of Mr. Gibson Bowles, the Chambers of Commerce and Shipping, and members of both Houses of Parliament, which had so far prevented over-hasty ratification of those documents.

After tracing the history of the movement towards an International jurisdiction in prizes, he proceeded to deal with the main questions raised by the Convention of 1907, viz., (1) the abstract advisability of an International Court; (2) the constitution of the Court proposed; and (3) the law which it is to administer. The answer provided by the Convention to the third question, that, in the absence of an accepted rule, the Court should decide "according to the principles of justice and equity," being felt to leave too much to the discretion of the judges, the Conference, summoned in 1908 by Great Britain, produced the Declaration of London, intended to equip the Court with the needed body of law.

Prof. Holland, after maintaining that the Declaration cannot be interpreted by the covering Report which accompanied it, went on to inquire how far its contents answer their purpose. He thought that its omissions, especially with reference to conversion on the high seas of merchant vessels into ships of war, were such as to unfit it for supplying that without which the Court ought not to be instituted.

Dealing next with what the Declaration, in its nine chapters, does contain, he dismissed from consideration chaps. iv. on 'Resistance,' and viii. on 'Destruction of Prizes,' as merely registering existing law, though well aware of the widespread contrary view as to the latter point; and, passing lightly over the surrenders of British doctrines occurring in chaps. iii., v., vi., and ix., concentrated his remarks upon chaps. i. and ii., round which controversy has chiefly raged. By chap. i. on 'Blockade,' Great Britain, he maintained, loosens her hold upon a useful weapon, without obtaining any serious concession in return. His examination of chap. ii. on 'Contraband of War' was full and careful. He touched upon the hard-and-fast lists of articles which are respectively "absolute" contraband, "conditional" contraband, and belonging to neither category. Passing on to the question of hostile destination, dealt with in the much-discussed articles 30-37, raising, especially with reference to food-supplies, questions of vital interest to Great Britain, he argued that, as they stand, and without further expert con-

sideration, these articles are inadmissible. He then proceeded to condemn the machinery provided by Government for the discussion of the two documents in Parliament, and again suggested the reference of the whole matter to a Royal Commission.

In conclusion, he submitted to the meeting the following six suggestions:—

1. Disentangle from the Naval Prize Bill the complex questions involved, and refer them to an expert Royal Commission.

2. The Prize Court Convention ought not to be ratified, at any rate till the proposed Court is equipped with a satisfactory body of Prize Law.

3. The Declaration must be interpreted without reference to the covering Report.

4. The Declaration fails to supply the body of law required to justify ratification of the Convention.

5. Irrespective of its insufficiency for the needs of the proposed Court, the Declaration is unfitted for acceptance even as an instalment of revised Prize Law.

6. The establishment of an International Prize Court should follow, rather than precede, agreement as to the law which such a Court would have to administer.

A discussion followed, in which the Lord Chief Justice, Lord Desart, Mr. Arthur Cohen, and Mr. Gibson Bowles took part.

GEOLOGICAL.—May 24.—Prof. W. W. Watts, President, in the chair.—The following communication was read: 'On the Geology of Antigua and other West Indian Islands, with reference to the Physical History of the Caribbean Region,' by Mr. R. J. Lechmere Guppy.

Prof. W. J. Pope gave a demonstration of new processes of colour-photography as applied to mineralogy and geology, illustrated by a series of extremely beautiful lantern-slides. The demonstration was followed by a discussion, in which the President, Dr. J. J. H. Teall, Prof. E. J. Garwood, Prof. J. W. Judd, and Mr. G. W. Young took part.

LINNEAN.—June 1.—Dr. D. H. Scott, President, in the chair.—Mr. F. Eyles, the Rev. Hilderic Friend, Mr. E. Lee, Miss A. C. Halket, Mr. J. C. Moulton, Mr. J. G. Murray, Mr. F. J. F. Shaw, Mr. C. Waterfall, and Mr. M. Wilson were elected Fellows.—The President announced that he had appointed the following as Vice-Presidents for the ensuing session: Sir Frank Crisp, Mr. Horace W. Monckton, Prof. E. B. Poulton, and Dr. A. B. Rendle.

Prof. W. A. Herdman gave an account of the occurrence in April of the minute Dinoflagellate *Amphidinium operculatum*, Clap. & Lachm., at Port Erin in the Isle of Man, in such profusion as to discolour the sand between tide-marks in patches extending on some days for many yards. *A. operculatum* had apparently not been previously found in Britain. The Rev. T. R. R. Stebbing and Prof. Dendy contributed some remarks.

Dr. A. Smith Woodward gave a general account of the fauna of the Carboniferous Period, so far as it has been discovered in the same deposits as the Carboniferous flora. The fauna agrees with the flora in consisting for the most part of highly specialized representatives of the lower groups, but is singularly modern in some respects. A discussion followed, the undermentioned taking part: the President, Mr. William Cash (visitor), the Rev. T. R. R. Stebbing, and Mr. A. O. Walker.

MICROSCOPICAL.—May 17.—Mr. H. G. Plimmer, President, in the chair.

Mr. J. E. Barnard made a communication on 'A Method of disintegrating Bacteria and other Organic Cells.' The author first mentioned that bacterial toxins were of two kinds, extracellular and intra-cellular. The former were excreted into the medium, e.g., beef broth, on which the organism was cultivated, so that by a process of filtration the organisms could be removed and the toxin was obtained in the filtrate; but the majority of pathogenic micro-organisms did not excrete their toxins, at least to any extent, and the toxins were retained within and formed integral parts of the cells of the organisms. One method of obtaining these toxins was to disintegrate mechanically the bacterial cell, so that the cell contents were expressed, and the apparatus described accomplished this. It consisted essentially of a containing vessel, in which, by a suitable rotation of steel balls, the organisms were crushed. The principal conditions to be fulfilled in such an appliance were:—

1. Approximately every cell should be brought under the grinding action.

2. Little or no rise of temperature should take place.

3. The disintegration should be carried out in a vessel which was sealed, so that, when pathogenic organisms were dealt with, none could escape at any stage of the process.

These conditions were, in the main, complied with in the apparatus described. Experiments indicated that by this method the cell juices were obtained unaltered, and so were suitable for investigations on the chemical composition and properties of the bacterial proteins and other cell constituents; also that, after the grinding process had been carried on for a sufficient time, virtually no cells remained which could be properly stained by any recognized bacteriological method, and which therefore could be regarded as whole cells containing a normal quantity of cell juice.

Mr. James Murray presented a third portion of his report on the Rotifera observed by the Shackleton Polar Expedition of 1909, dealing with the new species, &c., from the Pacific islands. He said that in Fiji 15 Bdelloid Rotifera were collected, in Hawaii 24: 10 species were common to the two groups. In Fiji 2 new species were distinguished, *Callidina pacifica* and *Habrotrocha nodosa*, the latter previously known, as a variety, in India and elsewhere. In Hawaii there were no peculiar species, but some very distinct varieties. In the various Pacific islands there have been recorded 31 species of Bdelloids.

The attention of the Fellows was then directed to the collection of specimens of pond life which had been arranged for the evening.

ARISTOTELIAN.—May 29.—Mr. E. C. Benecke in the chair.

Miss E. E. Constance Jones read a paper on 'A New Law of Thought.' In every proposition of form *S is P*, *S* and *P* denote the one thing (SP)—the *is* therefore signifies identity of denotation; extensionally or denotationally *S is P*—and the attempt to interpret *S is P* in extension only would reduce us to *S is S*: difference of intension of the term is necessary for significant assertion. And we cannot "identify" the extension or denotation of the one term with the intension of the other. And in intension *S is not P*. We can only say with Lotze that, taken in intension, *S is P* is impossible, and must be resolved into *S is S*, *P is P*, *S is not P*.

S is not P asserts difference, or otherness of denotation in intensional diversity, i.e., it denies what *S is P* affirms.

It is not until *S is P*, *S is not P*, have been admitted and justified that we are entitled to formulate the Law of Contradiction and the Law of Excluded Middle, and to say that

S is P } cannot both be true (Law of Contradiction) (1).
S is not P } " " false (Law of Excluded Middle) (2).

Taking (1) and (2), together with the analysis of *S is P* into an assertion of identity of denotation in diversity of intension, we can say that of any subject (*S*) *P* must be affirmed or denied, i.e., that of any subject (*S*), *P* or *not P* (but not both) may be predicated. Thus we obtain as a Law of Significant Assertion the following formula: Any subject of predication is an identity of denotation in diversity of intension.

If *S is P* (SP) is analyzed as above, immediate and mediate inferences are at once justified.

Mr. Russell's criticisms of this view may be answered by pointing out (among other things) (1) that his proof that, e.g., the author of 'Waverley' means nothing, seems to depend upon a double use of the word "meaning"; (2) that if in *The round-square is contradictory* the subject of the proposition has no denotation, this "proposition" (which Mr. Russell regards as a possible one) has no meaning of any sort—in fact, is not a proposition at all, and raises no difficulty whatever; for unless the roundness and squareness are referred to one thing (have one denotation), there is nothing self-contradictory in the subject; and moreover, if there were, it could not be asserted in the predicate, since *round and square* differ in intension from self-contradictory, and the whole thing is perfectly incoherent.

The paper was followed by a discussion.

FARADAY.—May 23.—I r. R. T. Glazebrook, V.P., in the chair.—The meeting took the form of a general discussion on 'High-Temperature Work.'

Dr. A. L. Day, Director of the Geophysical Laboratory, Carnegie Institution, Washington, contributed the first paper, entitled 'Recent Advances in High-Temperature Gas Thermometry.'—Dr. J. A. Harker gave a short abstract of his paper, illustrated by lantern-slides, on 'The High-Temperature Equipment of the National Physical Laboratory.'—Mr. H. C.

Greenwood read a paper entitled 'The Boiling-points of Metals.'—Mr. A. Blackie communicated a paper 'On the Behaviour of Silica at High Temperatures.'—Prof. Max Bodenstein of Hanover sent a communication on 'Methods of maintaining Constant High Temperatures.'—M. Charles Féry contributed a short note on 'Stellar Pyrometry.'

A general discussion followed.

MEETINGS NEXT WEEK.

- Mon. Institute of Actuaries, 5.—Annual Meeting.
— Royal Institution, 5.
— Geographical, 8.30.—'Some Explorations in the Himalayas,' Dr. A. Nove.
— Institute of British Architects, 8.30.—'Egyptian Architecture,' Mr. E. Richmond.
Tues. Asiatic, 4.—'The Vedic Akhyana and the Indian Drama,' Dr. A. Berriedale Keith.
— Statistical, 5.30.—'Under the Crown,' Sir J. Athelstane Balcan.
— Faraday, 8.—'Allotropic Forms of Metals,' Prof. Ernst Cohen.
— Anthropological Institute, 8.15.—'The Saints of the Indus Valley,' Major A. J. O'Brien.
— Colonial Institute, 8.30.
— Zoological, 8.30.—'On Antelopes of the Genera *Madoqua* and *Rhynchotragus* from Somaliland,' Dr. R. E. Drako-Brockman; 'On an Amphipod from the Transvaal,' Hon. Paul A. Methuen; 'The Somali Rhinoceros and the Nigerian Klipspringer,' Mr. R. Lydekker.
Wed. Archaeological Institute, 4.30.—'Notes on the Heraldic Jall or Yale,' Mr. G. C. Druce.
— Meteorological, 4.30.—'The Diurnal Inequality of Barometric Pressure at Castle Oer, Dumfriesshire,' Dr. C. Chree; 'Rain-drop Experiments,' Mr. Spencer C. Russell; 'Investigation of the Electrical State of the Upper Atmosphere, August, 1910,' Mr. A. J. and Dr. W. Makower, Mr. W. M. Gregory, and Mr. H. Robinson.
— Geological, 7.30.—Special General Meeting; Papers 'On a Monchiquite Intrusion in the Old Red Sandstone of Monmouthshire,' Prof. W. S. Boulton; 'Notes on the Culm of South Devon: Part I., Exeter District,' Mr. F. G. Collins.
Thurs. Geographical, 5.—'Report on River Investigation,' Dr. A. Strahan.
— Royal Numismatic, 6.30.—Annual Meeting.
— Linnean, 8.—'The Anatomy of *Enhalus acoroides*, Rich.,' Miss H. M. Cunningham; 'On the Life-History of *Croce filipensis*, Westw.,' Prof. A. D. Imms; and eight papers relating to the fauna of the Seychelles.
— Chemical, 8.30.—'The Alleged Complexity of Tellurium,' Messrs. A. G. Vernon Harcourt and H. E. Baker; 'The Purification and Properties of Acetic Acid,' Messrs. W. R. Bousfield and T. M. Lowry; 'Cupriglycolates,' Mr. S. U. Pickering.
— Society of Antiquaries, 8.30.

Science Gossip.

DR. ALEXANDER BRUCE, an eminent specialist on diseases of the nervous system, died in Edinburgh on Sunday last. Dr. Bruce, an Aberdeenshire man with a most distinguished record as a student, in addition to his many contributions to the medical journals and to the *Transactions* of the Royal Society of Edinburgh, was the author of several important works, notably 'Illustrations of Mid and Hind Brain' and 'The Topographical Atlas of the Spinal Cord.' An excellent German scholar, he published translations of Thoma's 'Manual of Pathology' and of Oppenheim's 'Textbook of Nervous Diseases.'

NEXT Tuesday Prof. Ernst Cohen of Utrecht will lecture to the Faraday Society on 'Allotropic Forms of Metals' at the rooms of the Institution of Civil Engineers.

PROF. BOSE, whose death at the early age of 36 is reported from La Plata, was Professor at the University of that town, and Director of the Physical Institute. It is the only one of the kind in South America, and owes its present importance to the Professor. He was a German by birth, and was Professor at the Technical College of Dantzig before he accepted the South American appointment.

PROF. A. E. TÖRNEBOHM, whose death at the age of 72 is announced from Sweden, was one of the most distinguished Swedish geologists. From 1878 to 1897 he was Professor of Mineralogy at the Technical College of Stockholm. His investigations regarding the iron mines of Sweden, and his studies on Portland cement, had made his name well known in geological circles.

ANOTHER small planet was discovered by Herr Hoffrich at the Königstuhl Observatory, Heidelberg, on the 18th ult.

FINE ARTS

Chardin. By Herbert E. A. Furst. (Methuen & Co.)

THAT brilliant writer, but somewhat captious critic, Diderot, acclaims J. B. S. Chardin as "one of the greatest colourists in the whole realm of art." We may hesitate to accept such a sweeping statement as that, but we must admit him to be the finest painter of *nature morte* which France can show, and there are some who consider his domestic genre to be unsurpassed. Yet this charming artist has only just escaped oblivion, as it were. Who ever spoke of Chardin twenty-five years ago? Bryan and Stanley of those days devote barely eight lines to him in their Dictionary, and style him "the painter of the passions of the soul," as inappropriate a term for his work as could well be found. Now this unassuming artist emerges from his bourgeois obscurity into greater renown than he ever enjoyed in his lifetime, "peintre ordinaire au Roi" though he was.

In this country he is probably little known to the general public, and until the last few years there was nothing by him in our National Gallery, which to-day can boast of only two unimportant examples. There are three of his works in the Hunterian Museum, Glasgow; one each in the Scottish National Gallery, Edinburgh, and the National Gallery of Ireland; while 'The Girls at Work' at Dulwich (if it be by Chardin) completes the list of his pictures to be found in the public exhibitions of the United Kingdom. At the Louvre one may see thirty, and Baron Henri de Rothschild owns nearly as many. But, whilst there is so little by Chardin to be seen at home, the appreciation of his work has enormously increased both here and abroad.

Mr. Furst has, then, in Chardin a fine subject for a monograph, not, to be sure, in the uneventful life of the honest, homely man himself, son of the King's billiard-table maker, who never once quitted the environs of Paris, and whose three lifelike drawings in the Louvre of himself and wife are the quintessence of that bourgeoisie of which he is the inimitable illustrator; but in respect of the painter's eminence in more than one branch of art, especially in his dissimilarity to his contemporaries, and the striking contrast which his work presents to the life, sentiment, and characteristics of the eighteenth century in France. We ought, perhaps, to say to the conventional France of that period, France as we are accustomed to think of it, namely, as enjoying a kind of prolonged "Fête Galante." If we run through the long roll of painters who shed lustre on their country's art, from the day in which the death of the "Great Monarch"

lifted the gloom that hung over the French Court and nation, till the fall of the Bastille, we find them vying one with another in depicting existence as a long round of frivolity, or at best a (so-called) "pastoral" unreality: differing *toto cælo* from the sober, modest domesticity of Chardin's figure pictures, or his still-life subjects, painted, as the *Mercur de France* of 1732 justly says, "with a care, a truth, that leaves nothing to be desired."

Side by side with life as dreamt of or mirrored by Watteau, Lancret, Pater, Boucher, and many more of that age, there was running all the while a silent undercurrent of bourgeois existence, wholesome, simple, and probably dull. This commonplace world Chardin depicts with absolute truth, and without being at all dull, such is the delightful quality of his technique and brushwork.

The middle class, which before Chardin's time can hardly be said to have existed, was to have its "innings"; to be, in fact, the paramount power in the State, its influence growing as that of the monarchy declined. Crozat the banker, for example, owned 19,000 drawings, and "Old Masters" of the first rank by the dozen, it is said. But whilst Chardin, a bourgeois, painted the bourgeoisie as no one had done before him, it was not that ambitious section of it which stood above the people and aped the pride and luxury of the *noblesse*; it was the simple folk, acquainted with daily work, happy in obscurity, that he depicted.

The genius of this painter was, as the Goncourts have said, "la génie du foyer." It is consistent with this that Chardin was limited in his range of subjects; of invention or imagination he had none, and it is notorious that he repeated his work frequently. Of the favourite 'Bénédicité' there are two examples now in the Louvre, another at the Hermitage, and, as we think, the finest of them all at Stockholm; whilst of 'La Blanchisseuse' four or five copies exist. So also with his *nature morte*: 'Gibier' is painted over and over again, and in the 'Dead Hare' at Stockholm he has left us one of the most remarkable pieces of imitative art ever put on canvas. It was with "still life" that Chardin began. The story goes that it was owing to the offer of a sum of money, which his friend the painter Aved refused, for a portrait that Chardin was led to take up genre and figure painting, coupled with the taunt of his colleague that "to paint a portrait was not so easy as to paint a sausage," that being the work Chardin was busy on at the time.

His first figure-picture was shown in 1734. A few years later he was fashionable. Frederick the Great, when Crown Prince, bought some of his pictures, and these are now amongst the treasures of the Prussian Court; Louis the Well-beloved gave 60*l.* for one of his works, but our artist was never handsomely paid, and had, apparently, nothing of the love of money in him. The Goncourts give

particulars of some of the miserable prices realized, e.g., in 1745 twenty-five livres (just a sovereign) for 'Le Toton,' now in the Louvre. Twenty-five years later such a picture as 'La Bénédicité' fetched only 90*l.* livres, about 36*l.* of our money, and these were his best prices. For "still life" he got much less: a 'Game' subject realized at the Mollini sale only 25 livres, and Wille, in his memoirs, congratulates himself on getting two little pictures for 36 livres the pair.

Chardin always remained essentially a still-life painter; there is no action in his compositions. In 'La Gouvernante' the young woman does not brush the hat, all movement of the hands is suspended; the 'Pourvoyeuse' leans against the dresser whilst Chardin paints her, carefully and slowly; so, too, the 'Ratisseuse' does not scrape, nor does the 'Écureuse' scour; the 'Youth with a Violin' at the Louvre does not play it, and one might multiply instances. But the minutest details are always given, and with Dutch-like fidelity. He said himself "le travail lui coûte infiniment." Mariette says of him "he could only work with the object he proposed to imitate under his eyes." This Netherlandish style may be traced to the influence of Aved (the friend named above), who shared his studio, and was educated in Holland. It is said that when the committee of the Salon first saw one of Chardin's pictures, they supposed it to be by a Dutch artist; its affinity to the École Flamande is undeniable, and Mr. Furst makes some interesting comparisons, showing works by Netscher and Metsu side by side with pieces by Chardin.

Forty-four process blocks, some of which (especially the still-life subjects) leave much to be desired, and a frontispiece in colour illustrate the book, which has an Index and a catalogue of Chardin's principal works, founded on those of Guiffrey and Bocher, "with intentional omissions, corrections, and a few notes." The last, we think, might have been amplified with advantage; and as to omissions, further reference to the engravings after Chardin, say by the Surugues, Dupin l'ainé, Lépicié, Le Bas, and others, would have been acceptable. The titles alone of these prints suggest the range of the master, and they make us acquainted with work by him which we should otherwise perhaps not know of; moreover, in the words of the Goncourts, they express Chardin "body and soul."

The result of much philosophizing in this volume leads to the conclusion that "all modern art, in so far as it aims at optical truth, is influenced by Chardin through the medium of the great School of French Impressionism," which shows that Mr. Furst has looked at his subject through the medium of the latest, or almost the latest, fashion of art-criticism. We cannot follow him over such debatable ground; he is, of course, entitled to treat of his artist in his own way; and he writes with knowledge, and genuine enthusiasm of Chardin's art, which he

considers "at its zenith comparable, even in its technique, to Velazquez's later and best works." For ourselves the book would have gained in interest had it contained more about the *milieu* in which Chardin painted, and something, it may be, of the people he represents. The powdered and painted ladies, the bewigged fine gentlemen, the impossible shepherds and shepherdesses of eighteenth-century art, we know well by sight; but we should be pleased to learn something more about the good people Chardin has depicted so faithfully that, in the words of a contemporary, a woman of the Tiers État saw in his pictures her own *ménage*, her daily occupations, even "l'humeur de ses enfants, son ameublement, sa garde-robe."

"L'humeur des enfants"! These few words convey the chief merit of Chardin. The sweet seriousness and rapt intensity with which they play their game of "goose," or build their card castles, or watch "les tours de cartes"—such, and we know not how many more, *nuances* of the moods of childhood may be seen in 'L'Inclination de l'Age,' in the quaint gravity of 'Saying Grace,' or the *gentillesse* with which the lesson is recited in 'La bonne Éducation'; or the absorbed look a demure little maid bestows on the reflection of herself in the mirror in 'La Toilette du matin.'

OUR LIBRARY TABLE.

Medallic Illustrations of the History of Great Britain and Ireland. Plates CXXXI.—CXL. and CXLI.—CL. (British Museum.)—This fine series of medallic illustrations of English history is now approaching completion. Parts XIV. and XV. cover the period between 1709 and 1731. Medals were struck illustrating the battle of Malplaquet and the capture of Mons, in 1709; the battles of Almenara and Saragossa, and the capture of Bethune, St. Vincent, and Aire, in 1710; the congress and peace of Utrecht, in 1712–13; and the siege of Gibraltar, in 1727. The proclamation of George I., and his accession, landing at Greenwich, entry into London, and coronation gave rise to a large variety of medals; whilst the succession of George II. and his subsequent visits to the mining district of Hanover were similarly honoured. On the other hand, there are various Jacobite medals of James III., "the old Pretender," and of Prince Charles Edward and Prince Henry.

This period includes, apart from political events, an interesting series of portraits of distinguished persons. Among them are medals commemorating Dr. Henry Sacheverell, the polemical preacher, 1710; Sir Andrew Fountaine, who succeeded Sir Isaac Newton as Warden of the Mint, and another of Sir Isaac on his death in 1727; a large variety, chiefly satirical, of John Law, financier and speculator; Prior, poet and diplomatist; Sir Christopher Wren, on his death in 1723, with the west front of St. Paul's on the reverse; John Freind, physician; Dr. Samuel Clarke, divine and philosopher, on his death in 1729; and Addison's friend Steele.

The social life of the times also receives a certain amount of illustration. There is a silver medal of the Sensorium Club, 1715

which served as a ticket of admission to the rooms in York Buildings, Villiers Street, Strand. The club consisted of a hundred gentlemen and a hundred ladies "of leading taste in politeness, wit, and learning." They were entertained with "Music, Eloquence, and Poetry," as well as occasional dramatic performances. The silver Betterton badge or pass ticket admitted to the performances of an actor and playwright of some note in the days of Queen Anne.

A fine medal of the bust of Conyers Middleton, with a library or bookshelves on the reverse, was struck in singular circumstances. When George I. presented Bishop Moore's library to the University of Cambridge, Middleton, who had been elected a fellow of Trinity in 1706, was made chief librarian. Middleton, a scholar of some distinction, visited Rome in 1724, and was received with much honour. He was, however, much disgusted to find that "the librarian of the Vatican supposed that Cambridge was only a great school to prepare youths for Oxford"! In order to eradicate this insult, Middleton caused this large medal in high relief to be executed by Giovanni Pozzo, an Italian artist of high repute.

Catalogue of Jewellery, Greek, Etruscan, and Roman, in the Departments of Antiquities, British Museum. By F. H. Marshall. (British Museum.)—A catalogue is never very promising material for the reviewer, but it is always a pleasure to welcome a new issue from the British Museum. The national collection of ancient jewellery began with the purchase of the Hamilton collection by Act of Parliament in 1772. Then followed—once the nucleus established—in rapid succession, the Townley collection, the Payne Knight Bequest, and that of Sir William Temple. The Museum purchased the gold ornaments discovered by Salzmann and Biliotti at Kameiros, and soon after (1867) some of the finest specimens were added from the Duc de Blacas collection. Then in 1872 and 1884 came the Castellani sales, a veritable mine of masterpieces, specially of Etruscan work. In more recent days came from "one of the Greek islands" the Mycenæan ornaments usually credited to Ægina. From the circumstances of their finding the veil of mystery has never been lifted. The last great gift of ancient jewellery to the nation was made by Sir A. W. Franks in 1897. It may be that in England the race of wealthy and learned amateurs is becoming extinct. A selection of the wonderful and beautiful gold ornaments found by Dr. D. G. Hogarth at Ephesus (1904-5) was ceded to the British Museum, but only when duplicates were found. The bulk of the jewellery is the property of the Museum at Constantinople.

We have nothing but praise for the catalogue. Mr. F. H. Marshall works with a fine tradition behind him, a tradition so settled and accomplished that it becomes almost automatic. The Bibliography is full, and well up to date. We note only one serious omission. In the references to the 'Orphic Tablets' there is no mention of Siebourg's 'Neue Goldblätchen mit Griechischen Aufschriften' which appeared in the *Archiv. f. Religionswissenschaft* for 1907.

The inclusion of these tablets in a catalogue of jewellery merely on the ground of their gold material is rather odd. It has, however, this advantage, it reminds us that in origin jewellery was probably rather magical than ornamental. The dead Orphic initiate hanging his tablet as an amulet round his neck is not the last exponent of such primitive thinking. The Cretan women of to-day, Dr. Evans tells us, wear pierced Minoan signet gems as milk charms.

EARLY CHINESE PAINTINGS, POTTERY, AND BRONZES.

DESPITE the attraction of the pottery and of some admirable statuettes, the interest of this exhibition at Mr. Paterson's Gallery centres upon the superb series of paintings. No other collection of equal beauty is to be seen just now in London art galleries, and, indeed, it offers to connoisseurs a fitting continuation of the display of Chinese work inaugurated a little while back at the British Museum. The standard of excellence is so even that it is difficult to select for special admiration the finest of these pictures. One of the most pleasing is the *River Scene with Boats* (24), which on a smaller scale has an attraction similar to that of the great 'Earthly Paradise' in the National Collection. In this mild twilight the figures have the transparency of pale flames. They glimmer here and there in enchanting groups like will-o'-the-wisps—subtle emanations from the earth which will vanish with the day. Without the aid of such obviously romantic subject-matter, No. 35, *Horse tied to a Tree and frightened by a Monkey*, and No. 18, *Golden Pheasants and Flowers*, are at least as fine, though in the latter we see just a trace of the slight jerkiness of line, the pleasure in contriving neat little shocks of surprise for the beholder, which characterize Japanese rather than Chinese art. Nevertheless this panel is in its way a masterpiece alike in its colour-scheme, and extraordinary delicacy of detail. The romantic *Landscape* (19) is again a technical marvel; never before, one is tempted to say, has water-colour been handled with such amazing confidence and delicacy. Line and tone-interval perhaps swagger just a little when compared with the perfect calm of the classic examples of Chinese painting wherein the tranquil curves are made up of elements scarcely visible as separate entities, but vaguely felt, like the quiet pulse of normal life. In No. 26, *The Gambler*, the error is in the other direction, as is more common in Chinese work; you can no longer trace the detailed structure of the curve as it moves from point to point, and the line, a little slippery, escapes control and becomes a trifle empty. In the best periods so slight a slip on either side of perfect draughtsmanship sufficed to bring about a reaction that, alongside of European models, the Chinese standard hardly seems to fluctuate.

The increasing interest displayed by the general public in Chinese art may be looked at as an encouraging sign of the times, if it be not merely a fashionable craze for what is rare and curious. Rare these old Chinese paintings certainly are, and becoming more so every day—such perishable stuff cannot often survive the centuries in such relatively good condition as the works now being considered; but the commercial competition for the possession of what is rare for the sake of its rarity is the lowest impulse of the collector, nor does love of the exotic as such necessarily indicate a highly cultivated taste. The attractions of a work of art are of two kinds: there is first its intrinsic beauty, the perfection with which its parts and processes are so related as to satisfy the most permanent desires of humanity; and secondly, there is its allusiveness, or what, in terms of current art-criticism, are called its illustrative qualities. The average man in England to-day is almost blind to the first quality. He is interested in art as a representation of actuality, and this interest is evidently most legitimate when the actuality represented is within his own

ken, so that he can appreciate truthful delineation and shrewd comment. To exchange illustration thus closely sympathetic for "quaint" representations of an alien and unfamiliar life is a shallow policy, and a good deal of the past European craze for Japanese art has somewhat deserved the derision of the Philistine on this ground, because it has implied a preference for a superficial view of the unfamiliar to a full and eloquent presentation of the familiar. This preference is the basis of sentimental globe-trotting and of the romance of "costume" pictures and "costume" plays. Japan has for many years disputed with the Italian Cinquecento the premier place among the "lubberlands delectable" of those who would shirk the claims of first-hand experience to be a typical representation of human life. Chinese art is less fully illustrative, and to the man who looks to it for the representation of actuality it is dull compared with that of Japan. A comparatively narrow range of subjects sufficed a school of painters with whom any subject was but an excuse for using materials in the most brilliant and tranquil and subtle manner possible. That each pigment used should make its entry and its exit noiselessly; that each process employed should seem naturally to arise out of the previous one, and lead imperceptibly into the next; that the perfect continuity of line and tone should yet consist in a gravely ordered series of successive movements, wash following upon wash, line upon line, like recurrent ripples on the shore—these were the preoccupations of a race of artists who have produced, on the whole, work more permanently satisfying than any other. Except the intrinsic beauty of their work, there is little in it to interest the average European, and the attention which is being given to it by amateurs must be a sign either of artistic insight or of the purely commercial competition for rarities proper to the stamp collector. In any case these exhibitions offer the finest possible education for artists.

OTHER EXHIBITIONS.

MR. W. ROTHENSTEIN'S collection of Indian studies at the Chenil Gallery represents him almost exclusively in what remains his most convincing part—that of a draughtsman. As a painter his determined acceptance of the literal Western outlook, while it is evidently sincere and born of a real distrust of stylistic convention, is never quite happy. As a draughtsman he consents to a bolder abstraction of essentials, and, whether from the atmosphere of Oriental art by which he was surrounded, or from the classic simplicity of costume of his sitters, we find him even more abstract than usual in these drawings, which are yet astonishingly intimate for the results of what, after all, was but a short sojourn. It is a record of prodigious industry, very varied and very serious in its outlook, and we await with interest the effect of the experience on the artist's method of approaching English subjects. Nos. 8, 11, 13, 27, and 36 are among those we specially noted for the beauty of their drawing. But, indeed, throughout we have evidence of a learned draughtsman moving among these Orientals as one at home. It is only in an occasional colour-study that we feel the clever tourist.

At the Baillie Gallery is a representative collection of the work of Mr. James Pryde, including many old acquaintances and one

little masterpiece—a prize fight in a setting of fantastic spaciousness. Mr. Pryde derives from the East his bold way of accommodating his themes to his pigments, instead of mixing his pigments to imitate the pitch of nature, and hence come a handsomeness of paint and a decorative quality which are very attractive. The *Prize Fight* has a thoroughness and subtlety of structure which mark a substantial advance in his always interesting talent. It is one of the first pictures he has shown which suggest that he might be disposed to allow his extraordinary natural gifts for painting the training they require to develop them to their full extent.

SALE.

MESSRS. CHRISTIE sold on Thursday, the 1st inst., the following pictures from various collections: L. de Jongh, Portrait of a Gentleman, in black coat and cap, with white linen collar, 304/. Reynolds, Robert Annot, Archbishop of York and Chaplain to George III., in robes, as Chancellor of the Order of the Garter, 220/. Gainsborough, Mrs. Woodward, in white dress, pulling on her glove, 273/. Romney, Portrait of a Girl, in white dress, with flowing hair, resting her chin upon her left hand, 210/.

Fine Art Gossip.

THE members of the St. George's Society announce the private view of their second exhibition next Thursday at the St. George's Gallery, 108, New Bond Street.

At the Carfax Gallery next Wednesday the first exhibition of the Camden Town Group will be open to private view.

DURING this month and the next an exhibition of lithographs and etchings will be on view at the City of Manchester Art Gallery.

MESSRS. W. & D. DOWNEY, the royal photographers, will show from the 12th to the 24th inst., at the Clavier Hall of the Arts and Dramatic Club, an exhibition of photographs which will include most of those they have taken of our reigning house for the past fifty years.

WE receive together the Annual Report of the Fitzwilliam Museum Syndicate for the year ending last December, and the Second Annual Report of the Friends of the Fitzwilliam Museum, whose generous help has been judiciously used. The advance of the Museum under the present management is obvious and gratifying.

THE firm of Georg Müller at Munich announce a new edition of Vasari's 'Lives,' edited by Dr. Karl Frey (one of the most learned and eminent of German art historians) from the original editions of 1550 and 1568. The first volume will appear on July 30th, the fourth centenary of Vasari's birth, and the whole work will consist of six to eight volumes. There can be little doubt that the publication will be indispensable to every serious student of Italian art. *The Athenæum* some months ago referred to the fact that Dr. Frey was to edit the Vasari MSS. from the archives of Count Rasponi Spinelli in Florence. This work, which is now approaching completion, will be issued in German and Italian by the same Munich firm.

THE Vicentini family of Rieti have placed in the Cathedral there the altarpiece which for many centuries adorned their chapel

in the church of S. Domenico. It was executed in 1528 in accordance with the terms of the will of one of the family, and represents the Madonna with angels and the patron saints of the family, SS. Vincent and Nicholas. The work, which is in very good condition, is by the Veronese painters Lorenzo and Bartolomeo Torresan. This attribution, which was first made by the painter and restorer Prof. Colarieti-Tosti, has been confirmed by documents not long since discovered and published by the Hon. Inspector of Works of Art at Rieti, Prof. Sacchetti-Sasseti.

SIGNORELLI'S altarpiece in the church of S. Croce at Umbertide has been restored by order of the Minister of Public Instruction. The work was carried out by Prof. Colarieti-Tosti.

EXHIBITIONS.

SAT. (JUNE 10).—A. W. Bahr Collection of Early Chinese Paintings and Pottery and Porcelain, Press View, Fine Art Society's Gallery.
— Romaine Brooks's Paintings, Goupil Gallery.

Musical Gossip.

HERR GUSTAV HAVEMANN, a pupil of Joachim, gave at an orchestral concert at Queen's Hall on Tuesday evening a first performance in England of a new Violin Concerto by the veteran composer Max Bruch. It consists of only two movements, an Allegro appassionata and an Adagio. Schubert's Symphony in B minor is properly described as "Unfinished," and the work now in question certainly creates the same impression. There is good and effective writing in the opening movement, while the short Adagio is smooth and very expressive. The theme appears to have been borrowed from 'The Little Red Lark of the Mountain,' the County Armagh version (No. 384) as given in Sir Charles Stanford's edition of the Petrie Collection of Irish Music. Max Bruch's great G minor Concerto has not been thrown into the shade, but this new work is pleasing, and gratefully written for the soloist. Herr Havemann gave a most refined, sympathetic rendering of it. We must take a later opportunity of noticing another novelty, Reger's 'Chaconne' for violin solo, which was placed almost at the end of a long programme. The orchestra was under the able direction of Mr. Lennox Clayton.

ON the following evening a young violinist, Miss Aimée Carvel, gave a recital in the same hall. She has evidently been carefully taught. Her technique is good, and so is her intonation. In various short pieces, also in Tartini's 'Trille du Diable Sonata,' her style of phrasing and interpretation showed that she has taste, judgment, and feeling.

FRAU JULIA CULP, an admirable singer, gave her last vocal recital this season at Bechstein Hall on Wednesday evening. Her well-selected programme included two groups of Brahms songs, another group being devoted to four songs by Chopin, whose name is rare in programmes of vocal recitals; and a fourth to Hugo Wolf. All these were ably interpreted, notably

Brahms's "Schwalbe sag' mir an," and Wolf's 'Weyla's Gesang' and "Und willst du deinen Liebsten sterben sehen?" Mr. Erich Wolff rendered good service at the piano.

TO-MORROW afternoon, at the Albert Hall, Madame Melba makes her last appearance at a London concert before her departure for Australia, where she will undertake an extensive operatic tour.

THE concert given by Madame Adelina Patti at the Royal Albert Hall on the 1st inst. for the benefit of Mr. Wilhelm Ganz, who has been disabled by an accident, drew a large audience. For the last forty years Mr. Ganz has been, at any rate at London concerts, her chief, possibly sole accompanist, and by this kind action Madame Patti has shown how much his services have been appreciated by her. Little notice as a rule is taken of accompanists, yet much of the success achieved by great singers depends upon the skill and watchfulness of such helpers. Mr. Ganz, now in his 78th year, has played an active part in the musical life of London during the last sixty years.

A CONCERT VERSION of Henry Purcell's 'The Fairy Queen' will be given this evening by the music students of Morley College at the Royal Victoria Hall, Waterloo Road, under the direction of Mr. Gustav von Holst. The play of 'The Fairy Queen,' originally produced in 1691, was Shakespeare's 'Midsummer Night's Dream' with some extraordinary changes and additions by an anonymous writer. It would be useless to revive this on the stage, and the fine incidental music on the concert platform loses little, and that only occasionally, of its point and charm. A short explanation of each act, to be provided by Dr. Vaughan Williams, will, however, help the audience to follow the story.

MR. BEECHAM announces a symphony concert of the works of Frederick Delius, to be given at Queen's Hall on Friday evening next. The programme will include the Symphonic Poem 'Paris, the Song of a Great City'; an Entr'acte from 'The Village Romeo and Juliet,' a work which, if not successful as an opera, contains much excellent music; 'Appalachia'; and a new cycle, entitled, 'Songs of Sunset' (words by E. Dowson), for soprano and baritone soli, chorus and orchestra, in which Madame Julia Culp, Mr. Rheinhold Warlich, and the Edward Mason Choir will take part.

THE LONDON TRIO, which has been carrying out its scheme of performing all Beethoven's Pianoforte Trios, will interpret the one in B flat (Op. 97) at its last concert on the 28th inst. at the Æolian Hall. Marked attention has been given this season to Beethoven's chamber music. Messrs. Ysaye and Pugno gave a series of the Sonatas for violin and pianoforte, while those for 'cello and pianoforte were performed by Messrs. Godowsky and Gerardy.

M. JOSEPH STRANSKY, who succeeds Gustav Mahler as conductor of the Philharmonic Concerts at New York, began his career, as did Mahler, at the National Theatre, Prague, under the direction of Angelo Neumann.

THE programme of the Worcester Musical Festival, which will be held September 12th-15th, includes three novelties: 'Sayings of Jesus,' by Dr. Walford Davies, an orchestral

work by Granville Bantock, and five Mystical Songs by Dr. Vaughan Williams. Sir Edward Elgar's new Symphony and Violin Concerto will also be performed.

PERFORMANCES NEXT WEEK.

SUN.	Special Concert, 3.30, Albert Hall.
—	National Sunday League, 7, Palladium.
MON.—SAT.	Royal Opera, Covent Garden.
MON.	Miss Violet Anderson's Vocal Recital, 3.15, Æolian Hall.

SAT.	Madame Clara Butt and Mr. Kennerley Rumford's Concert, 2.30, Albert Hall.
—	Queen's Hall Orchestra Endowment Fund Concert, 3, Queen's Hall.
—	Mlle. Susanne von Morvay's Pianoforte Recital, 3, Æolian Hall.

DRAMA

Three Plays by Brieux. With a Preface by Bernard Shaw. The English Versions by Mrs. Bernard Shaw, St. John Hankin, and John Pollock. (Fifield.)

BRIEUX, it is to be feared, is little more than a name to the average English theatre-goer. Only three plays of his in all have obtained public performance in this country, and they have been produced at such irregular intervals that our audiences have had small chance of getting used to his methods or grasping his point of view. One of these, moreover—the piece Sir Herbert Tree staged at His Majesty's as 'False Gods'—is a curiously pretentious and artificial drama, relying largely on spectacle, and in no sense representative of its author. Of the remaining pair, 'Les Hanneçons,' the comedy which illustrates so piquantly how a liaison may impose on a man far more heavy fetters than the unhappiest of marriages, shows M. Brieux in his brightest mood; but it had a hard struggle with our censorship, and was scarcely seen outside the suburban playhouses. Thus it was with 'La Robe Rouge' alone, when given some years ago at the Garrick, that the French dramatist had any opportunity of appealing to the London public. A single play of a foreign author, however characteristic it may be, leaves but a slight impression unless it is followed up by other work from his pen, and it happened that the two most famous examples of M. Brieux's art were never able to secure a licence from the Lord Chamberlain's office. Only at the Stage Society's private ventures have 'Maternité' and 'Les trois Filles de

Dupont' ever been acted on the English stage.

Now, no matter how strongly we may feel that Brieux the artist is too often sacrificed to Brieux the moralist, no matter how little this prophet may be esteemed by the eclectics of his own nation, it cannot be denied that the author of 'Maternité' is a playwright of international reputation. Since, then, we are not permitted to hear him at his best in the English theatre, it was time to make his acquaintance through the printing press. We can do so to-day, thanks to the enterprise of Mr. Fifield, who has published the two banned dramas in their Stage Society renderings along with a translation of 'Les Avariés,' and a new version of 'Maternité' corresponding with M. Brieux's revision of the original text. For the book thus constituted there should be a welcome, especially as it has the advantage of a preface from the hand of Mr. Bernard Shaw, who champions his colleague with all the enthusiasm one stage propagandist may be expected to feel for another.

The point of contact between the two men is obvious. Both no doubt have the craftsman's interest in the theatre and its craft, though M. Brieux has much more belief than "G. B. S." in the older conventions of dramatic technique. But both also are men with a mission, social reformers, satirists of the evils and lethargy of their time, who desire to give vent to their convictions on the largest of all possible platforms. M. Brieux, like his brother-author, uses the stage as a pulpit. But while there is no reason why we should not be glad to see moral fervour or a spirit of earnestness informing the drama, a risk always besets the path of the artist turned doctrinaire, and the Frenchman does not escape that peril. Mr. Shaw's very freakishness and wit happily prevent him from assuming an air of solemnity even when his intentions are most serious; his colleague has no such safeguard, and, instead of gaining, his art actually suffers from what seems at first sight likely to be a virtue—his passion for uniformity.

"G. B. S." talks of Brieux as giving slices of life in his plays, and of his so selecting and arranging the material of everyday experience that he introduces order and connexion into an apparent chaos. No doubt in such words he hits off the aim of the best sort of realism. But in art everything turns on the system of selection, and M. Brieux is too apt to piece together the exceptional and the abnormal, and ask us to accept them as the rule; he is too fond of grouping such a set of characters as shall serve to illustrate every conceivable phase of his theme. So if, as in 'Maternité,' he wishes to picture the harshness with which society treats the mother of an illegitimate child, he must lodge his heroine in the house of an official who is eloquent on the necessity of repopulating France; he must show this official forcing his wife to bear offspring with an alcoholic taint; he will

bring on to his stage peasants starving from the size of their families; he will introduce into one scene four women who for different reasons are sobbing simultaneously over the burdens of matrimony; and he will crowd into his last act a number of people all concerned in a series of illegal operations.

His plays, in fact, have a tendency to become dramatized sermons or tracts. That tendency appears in its crudest form in 'Les Avariés.' There you see in the first act an engaged man consulting a physician about a disease from which he is suffering, and being warned that he must not marry for years; in the second you learn that the patient has defied his doctor's instructions, and you watch all the evils that the specialist predicted befalling his wife and child with a tragic thoroughness; while the closing scene is just one long monologue of the physician's, in which he enlarges to a visitor on the ignorance in which the public is kept as to this special disease, and illustrates its effects by calling into his consulting-room one after another of its victims. That last act might figure as part of a medical pamphlet, and has about as much connexion as a pamphlet with art.

The subject, of course, is one tabooed in ordinary conversation, and would prevent the play from ever being acted over here except *in camera*. But, apart from the subject, the treatment is at fault; M. Brieux's ethical purpose runs away with him, and in the end he calmly bundles off the stage every one of the *dramatis personæ* except the spokesman of his own theories.

The situation thus produced is typical of the whole trend of M. Brieux's theatre; really he is a physician of the body politic who describes and exemplifies on the stage the ailments from which modern humanity is suffering—alcoholism, sex-disorders, unhappy marriages, and the stupidities of so-called justice. Unfortunately, he sees these symptoms almost everywhere, and does not sufficiently balance the decencies and joys of life and human nature against the evils and the afflictions. Neither he nor Mr. Shaw allows enough for the instinct in mankind that feels after beauty and romance; they are unwilling to let their characters shape their own lives, and want to give them a little shake this way or that to suit their schemes. Moreover, both men are rhetoricians, and sometimes do not scruple to put long speeches into the mouths of unlikely persons. Thus their plays on occasion prove only less mechanical than those of the old-fashioned sentimentalists whom it has been their object to expose. The Frenchman has one advantage over Mr. Shaw—that he has nearly always a story to tell as well as a moral to point. But when Mr. Shaw assures us that M. Brieux is the greatest writer in tragi-comedy France has produced since the days of 'Tartufe' and puts him on a pedestal beside Molière, it is difficult to speak respectfully of his critical judgment.

THE DRAMATIC CENSORSHIP IN AUSTRIA.

A PECULIAR case of censorship is that of the treatment applied to Karl Schönherr's "tragedy of a people," 'Faith and Home' ('Glaube und Heimat'), which has been running on the Vienna stage for several months, though its performance has been prohibited at Linz and in other Austrian towns. The play deals with the experiences of a village in "the Alpine districts of Austria," at the time of the Counter-reformation; in other words, its action turns on the expatriation, by means of a dragonade, of those members of the village community who have refused to abjure Protestantism. Before the turn of the sixteenth and seventeenth centuries, practically the whole of the population of Upper Austria, and a large proportion of that of Lower, had adopted the Augsburg Confession; and the history of religious persecution tells no more awful tale than that of the reconversion of the archduchy. In this peasants' tragedy the story of this phase of Habsburg policy and its results is mirrored with extraordinary force and heartrending pathos. Anzen-gruber and other writers have familiarized us with the character of the Austrian peasant—brave, laborious, and unsentimental, but attached to hearth and home as by links of iron. They have also familiarized us with the theatrical use of a dialect of the true Doric sort—broad, strong, and clipped, and singularly well adapted for conveying repressed emotion. The dramatic conflict here is precisely that announced in the title 'Faith and Home'; while the characters are the true peasant types—differentiated according to the everlasting rubrics of humanity. We have the peasant whose only care is to increase his holdings and leave one to each of his sons; the aged peasant, whose sole desire is to die where he was born, and the adventurous boy (*der Spatz*) to whom the whole world is a home; the peasant who is afraid of his enthusiastic wife, and the rest of them. But the question of conscience comes as a test to all, and the hero of the tragedy is the simple master of the homestead who is stronger than his wife's fears and stronger than his own, because he at last finds the courage to obey the "inside" voice.

It is questionable whether the author was judicious in introducing among his characters a paradoxical vagabond couple, of whom the purpose seems to be to show that they prove nothing; and he need hardly have anticipated the final effect of the moral collapse of the "wild horseman" who is the agent of the persecution by providing him with previous "human" moments. The remaining secondary characters are drawn with admirable humour; and the effect of the drama as a whole is so overwhelming as to make even its local prohibition inexplicable, except on grounds at which it is humiliating to guess. A. W. W.

Dramatic Gossip.

SCOTLAND has annexed its corner of the West-End stage, and though this does not amount so far to more than a small and preliminary share in the bill of the Playhouse Theatre, Mr. Graham Moffat's company of Scotch comedians strike so distinctive a note that they deserve a wider field for their activities.

THEY provide an entertainment that is characteristically Scotch—in setting, dialect, and character. One might almost add costume, for the little play in which they figure, a piece of Mr. Moffat's own invention, is supposed to date back seventy years, and even Glasgow dress of that time offers a picturesque as well as an individual aspect. The members of the company, too, convey the idea of knowing thoroughly the types they represent. All the angularities of temper, the dry and acid humour, the cunning reserves underlying apparent frankness, that are covered by such terms as "canny" and "pawky" are brought out with a quiet yet vivid realism that is refreshing.

YET the play itself, 'Till the Bells Ring,' has a conventional story, and merely show how middle-aged Janet Struthers hesitates about accepting the proposals of John Snodgrass, an elder of the kirk, because as a widower he has been "sair on wives," surviving two, and with miserly habits has generally married for money. As a matter of fact, it is his discovery in Janet's clock of a stockingful of money that has stimulated his ardour, and he has never had a chance of putting back his find till the 400*l.* is reported as missing. Then it is declared to be the dowry of Janet's young niece, and all sorts of trouble threaten him over the disappearance of bank-notes, the numbers of which are well known. In the end he purchases the young bride's silence by promising to be the best of husbands to her aunt.

It is the simplest of tales, though with a tang that is distinctly Scottish. Mr. and Mrs. Graham Moffat and their colleagues put that touch of tartness into their characterization which lends it verisimilitude. It would be interesting to see whether their efforts, which lend a pleasing variety to Mr. Cyril Maude's programme at the Playhouse, would carry as well in drama of ampler range.

ERRATUM.—In the last paragraph of Science Gossip, p. 634, for "The Berliner Astronomisches Jahrbuch for 1911" read "for 1913."

BOHN'S LIBRARIES.

"Messrs. Bell & Sons are still energetically pursuing their task of adding to and improving the famous series of Bohn's Libraries, which Thomas Carlyle pronounced to be 'the usefulest thing I know,' and.....are constantly adding to the Libraries, in the new and certainly pleasanter form, reprints of standard works which no gentleman's library should be without."

MR. FREDERIC HARRISON in the DAILY CHRONICLE.

RECENT ADDITIONS. BIOGRAPHIA EPISTOLARIS.

(Being the Supplement of Coleridge's 'Biographia Literaria'.)

Edited, with numerous additional Letters, by
ARTHUR TURNBULL.
2 vols. 3s. 6d. each.

"There is no doubt that Mr. Turnbull has placed the world of letters under a deep debt of gratitude by his well-arranged presentation of Coleridge's life. We see the very pulse of the machine in the letters, and the connecting links enable us to witness the evolution, maturity, and fluctuations of genius, while at the same time we get to know and sympathize with the man."—*Manchester Courier*.

THE ROMAN JOURNALS OF FERDINAND GREGOROVIVS (1852-1874).

Edited by FRIEDRICH ALTHAUS,
And Translated from the Second German Edition by
Mrs. GUSTAVUS W. HAMILTON. 3s. 6d.

THE POEMS OF JONATHAN SWIFT, D.D. Edited by WILLIAM ERNST BROWNING. 2 vols. 3s. 6d. each.

"Swift, indeed, is himself so vital a figure, whether in Irish politics or in English literature, that everything he wrote—even the most occasional verse—is worth eager reading, and Mr. Browning is to be thanked for so ably editing these volumes in the complete Bohn edition of Swift's works. The hundreds of skits, satires, epigrams, and friendly epistles which they contain are an indispensable aid to all who wish for a detailed and satisfactory portrait of Swift in his different and often conflicting aspects. They are expressive trifles of a great man." *Daily News*.

THE UTOPIA OF SIR THOMAS MORE.

Ralph Robinson's Translation with
Roper's Life of More, and some of his Letters.
Edited by GEORGE SAMPSON.

With an Introduction and full Bibliography by
A. GUTHKELCH, M.A. 5s.

"A very acceptable reprint....Mr. George S. Sampson has edited the volume with great care, his notes on More's phraseology being exactly what are wanted. Mr. A. Guthkelch's introduction runs only to a page or two, but in this he says exactly the right word and no more." *Yorkshire Post*.

A SPECIAL OFFER OF A SMALL STANDARD LIBRARY SELECTED AT WILL

from nearly 750 volumes without regard to the prices of individual volumes, which range from 3s. 6d. to 7s. 6d.

PRICES FOR CASH—

100 Volumes : : : £11 11s. net.

50 Volumes : : : £6 6s. net.

The published prices of the above would be respectively about £19 and £9 9s.

LITERATURE

The Collected Works of William Morris.
With Introductions by his Daughter,
May Morris. Vols. V.-VIII. (Longmans & Co.)

THIS instalment of William Morris's works contains the second half of 'The Earthly Paradise,' together with the firstfruits of his knowledge of Iceland and its literature. The part of the cycle now printed includes two of the most characteristic poems he wrote—'The Land East of the Sun and West of the Moon' and 'The Lovers of Gudrun.' The former seems to epitomize and foreshadow one whole side of his future work—the exquisite prose romances, dreams within dreams, quintessences of intangible fanciful beauty; the latter is a model of power, of passion, of tact, in which the matter-of-fact fierce tragedy of the Saga has been retold. No touch of poignant emotion has been lost in the telling—the movement of the tragedy is as swift, as direct, as inevitable, as in any of the masterpieces of the ancient world, though, as Miss Morris says, the wildest and grimmest of the touches are softened or discarded, and the poet has been forced to explain at length what the Icelandic historian could trust to the habit of mind of his audience to supply—the motives of thought and action.

In our notice on January 7th we referred to the relentless way in which Morris sacrificed fine things to the unity of his poems; the prefaces to the volumes before us supply additional evidence,

if any were needed, of this sacrifice to artistic considerations. A few of these fragments were, it is true, preserved in 'Poems by the Way,' but we believe it may be said that these were selected from material at hand while the volume was being prepared, and that much of the poet's old work was not considered. How conscientious a worker Morris was may be estimated from the history of 'The Hill of Venus,' which the editor has told in one of her invaluable prefaces.

The last of the tales in the book, it was written probably before the 'Jason,' and rewritten no fewer than four times, whole sections being sacrificed on each occasion, in one case twenty-five stanzas, between the third and the fourth rewriting. A part of it, and that not the least important, was written while the book was passing through the press. Indeed, Morris's afterthoughts, as we learn them from these prefaces, have added much to the charm of his poetry. It was a happy afterthought which gave us Gregory the Stargazer in 'The Land East of the Sun'; it was no less happy to close 'The Hill of Venus' not with the despairing return of Walter to the Venusberg, but with the hopeful and peaceful ending of the aged Pope. Opinions will differ as to the printing of unpublished works of dead masters, but we consider that the description of Venus reprinted on p. xxiv of Vol. IV. would alone justify the issue of a new edition, if no other reason existed, since by the nature of things it could not take a place in a volume of short pieces. We do not propose to extract it, but it ranks with Morris's best in this variety of his verse. Miss Morris gives us, too, some new verses for the months. Here is a stanza from an unrevised and rejected 'February':—

Nay, silence, and get ready for the Spring,
And meet her with your heart all free from care,
For in the woods wolfsbane is blossoming,
And faintly shows the primrose here and there,
And there is scent of new things in the air,
And by the south wind blown from place to place
Northward the longed-for Spring draws on apace.

The poem which superseded this,

Noon—and the north-west sweeps the empty road,
The rainwashed fields from hedge to hedge are bare,
Beneath the leafless elms some hind's abode
Looks small and void, and no smoke meets the air
From its poor hearth: one lonely rook doth dare
The gale, and beats above the unseen eorn,
Then turns, and whirling down the wind is borne,

is one of the most effective cameos in our literature; but the earlier poem is worthy to stand near it.

'The Fostering of Aslaug' and 'The Lovers of Gudrun' presented Icelandic stories in a modern setting; the 'Grettis Saga' and 'Volsunga Saga,' translated in 1869 and 1870 before Morris went to Iceland, were a close reproduction of the form of the original as well as its spirit. The translations were made while he was studying the language with Mr. Magnússon, who contributes to the preface some interesting reminiscences of the circumstances in which they came into being. 'Grettir the Strong' has never been popular—more, we believe, on

account of the ill-conditioned youth of the hero than from any difficulty in its language, which has not been found a hindrance in 'The Volsungs.' Mr. Magnússon is prepared to do battle on behalf of a style which in itself needs no defence except from its defenders. We feel sure that some qualification must have been in Morris's mind when he made the statement that "Teutonic was the poetic element in English, while the Romance element was that of law, practice, and business." We question after all whether there is a notable difference in the percentage of Teutonic words in fine poetry as compared with that in ordinary speech, though much would depend on the poet selected. As a matter of fact, English at its best is strong in short words, and short words are most often Teutonic. It is in this essentially English use of short words that dignity of style lies, not in the fact that they are Teutonic. "Shoe-swain," to take Mr. Magnússon's example, is Teutonic, but it is neither poetical nor dignified. That such compounds should be used in translating a literature which depends for its effects on their employment is a different matter; they are in that case indispensable elements of the work, though they cannot be considered as ornaments.

The Journals of the Icelandic tour will be read with deep interest, though Mr. Mackail had given us a number of extracts of the more striking passages from the Journal of the first tour in 1871, which had been written out at length before the second journey in 1873. Even if these records had never existed, the reader of Morris's later books must have seen how deeply the impressions he had received in Iceland had sunk into his being. But we do not feel that the Iceland he saw was a home of the soul to him: he had already found a truer Iceland in its literature. No man ever loved Nature more than William Morris, but he was English to the backbone, it was the Nature of this country of ours that he loved, whose every acre, every tree and hillock, were bound up with the lives of uncounted generations and spoke of their handiwork. These Journals emphasize the difference between his feelings of happy recognition of any haunt of man, however wild and rugged, and the chill desolation of spirit which fell upon him in the waste. The desert was an experience for which on his first journey he was entirely unprepared, though we can readily understand how "that thin thread of insight and imagination which comes so seldom, and is such a joy when it comes," heightened his pleasure when he came to some storied marvel or holy place of Iceland. In his second journey he sought to renew this experience:—

"One gets an impression that for the time he had shaken off his human sympathies . . . that he had withdrawn into a frame of mind in which he saw the wilderness in its real loneliness, awful, unlovable, and remote from human life—the elemental horrors had seized upon him."

One compensation in the midst of his oppression, to which his organization made him peculiarly subject, and by which his last work was deeply affected, was the delight in the glorious feast of colour which evening after evening was spread out before him, reproduced for us as only a painter could see or describe it.

Memoirs and Memories. By Mrs. C. W. Earle. (Smith, Elder & Co.)

MRS. EARLE, who is well known as the author of some pleasant books on gardening, here offers to us the history of her family extending over one hundred years. The early chapters are largely genealogical, and are of more interest to the family than to the mere outsider. To say the truth, it is hard for the reader to disentangle the numerous relationships set down, and to remember them if he succeeds in detaching them. However, Mrs. Earle's Preface acquaints us with the fact that she has collected these letters and written these memoirs for the edification of her grandchildren, which is as it should be. The author quotes Renan at the head of her opening chapter: "L'oubli et le silence sont la punition qu'on inflige à ce qu'on a trouvé laid ou commun dans la promenade à travers la vie." It would be practicable to contest this view, but for Mrs. Earle's purpose at any rate it is a good enough guide.

A great deal of her book is occupied with the records and correspondence of her parents and grandparents. She was fortunate in being born into a wide circle of leisured gentlefolk, and had many connexions of distinction, as, for example, her brother-in-law the late Lord Lytton, Sir George Cornwall Lewis, and Lord Normanby. The volume contains family letters from these and others which have a certain public interest as side-lights on well-known characters. The Villiers letter-box must have been carefully guarded. Here and there we find an interesting item. Mrs. Earle asked Charles Villiers and Monekton Milnes as to the "truth about Mrs. Norton," the reputed heroine of "Diana of the Crossways": "Uncle Charles said it [the sale of the secret] was absolutely true, that he was in the Cabinet at the time and knew it; and Monekton Milnes denied it vehemently as a wicked lie." Of these two witnesses, at least, it would seem as if the former were in a better position to judge. Mrs. Earle's frankness is infectious, and so one may deprecate her allusion to her mother's "third great love." This frankness, which has its engaging qualities, is perhaps excessive, particularly when she comes to her own engagement and marriage. We are informed that she was not allowed to marry the man she loved, and married her husband by what was tantamount to a misunderstanding. Perhaps it is possible to look back on these things with different and indifferent eyes at

seventy-five. Lady Clarendon, we read, "always said she thought an unhappy marriage was better than none for a woman," with which pronouncement the author expresses her agreement. We seem to have travelled a very long way since Early Victorian days.

It is interesting to read that Mrs. Earle's Whig relations considered "that the death of the Prince Consort was a solution of the difficulty which had arisen between the Court and the Government, which might have led to a serious crisis." Mrs. Earle elsewhere expresses her fealty to extreme Liberal views throughout her life. We like the bon mot attributed to Napoleon III., though it is not, we think, new:—

"'Papa,' said the Prince Imperial to the Emperor, 'what is the difference between accident and misfortune?' 'I will tell you, *mon enfant*,' said the Emperor. 'If the Prince Napoleon were to fall into the river, it would be an accident; but if any one were to pull him out, that would be a misfortune.'"

Mrs. Earle's liberality of views extended to friendliness with George Eliot and Lewes, though, it appears, Lord Lytton got into a scrape with his chief for taking the couple to the Embassy box at the opera in Vienna:—

"Talking to me afterwards, he said, 'My dear, what could be the harm? They were both so ugly.'"

Mrs. Earle acknowledges her indebtedness for instruction in art to the late Harry Quilter, which is rather a bold thing to advertise. The volume concludes with the death of the author's mother and of her husband, and will be entertaining to readers anxious to estimate and reconstruct the social conditions of a past day.

Ancient Italy: Historical and Geographical Investigations in Central Italy, Magna Græcia, Sicily, and Sardinia. By Ettore Pais. Translated from the Italian by C. Densmore Curtis. (University of Chicago.)

WE have before us, from the pen of that veteran scholar Prof. Pais, whose original and independent views on Italian history are well known, a collection of scattered essays, on all manner of Italic problems, which it is difficult to review in the space we can spare; for each of them shows a wealth of learning hardly equalled in our day—of learning in all that the classical authors, and scholiasts and commentators, have left us in Greek and Latin, on the early occupants of the famous peninsula. Prof. Pais refers constantly to his history of Rome, a work little known in this country, and well worth producing in an English garb; for all that he says here in illustration or amplification of it shows that he is bound by no modern authority; he follows no master, but thinks the matter out for himself. He is also far removed from journalistic tendencies such as impair the

value of his brilliant fellow-countryman's work on the Roman Empire. Prof. Pais thinks of nothing but getting at the truth, and, if his conclusions are often doubtful, there is no one more ready to confess it than he.

We do not think his essay on the date and composition of Strabo's 'Geography' is very pertinent to the rest of the work. He is most ingenious on the curious gap which appears between the composition of almost all the books of Strabo, and the allusions to events in the reign of Tiberius, which have misled earlier critics into a misdating of the geographer's real age—that is, the date of his *floruit*. The Professor's solution is that the work was written and finished for an Asianic princess, Pythodoris, Queen of Pontus, just as Nicolaus was the historiographer of Herod the Great, but that it was retouched here and there in Strabo's extreme old age, and so "brought up to date" in the reign of Tiberius. The theory is attractive, but not very important. We should prefer to have the Professor's view on the question whether Strabo, in all his travels from Rome to Asia Minor, ever visited Athens. In our opinion he did not, for (contrary to his usual habit of asserting autopsy) he only quotes panegyrics of the city at second-hand. But it does seem strange that an author such as he, passing through Greece at the isthmus of Corinth and treating of Athens in his survey, should never have turned aside so small a distance for so great an object. The riddle is perhaps solved by Prof. Pais's notion that Strabo's wanderings were "not those of a person travelling on his own account and for scientific purposes, but rather of a man who seized every favorable occasion that circumstances and the pleasure of others gave him the opportunity of knowing." Perhaps he was only able to travel at other people's expense, and therefore, on the voyages which they undertook, had no permission to leave his company.

We turn from this digression to the main teaching of the book—the attempt to analyze the influence of the various races that occupied Italy in early times. On the Etruscan, indeed, the author hardly spends a page, but on Iapygians, Ausonians, Sabellians, Campanians, &c., he has many curious things to tell us. The general outcome is that either there was a very curious mixture of many races there, or the several settlements of one or two Italic primitive populations were called by divers names. What difference there was between Oscans and Sabellians. Iapygians and Bruttians, we have not yet discovered, and probably we never shall. Ligurians, Etruscans, Latins, and the southern barbarians seem distinct, and that is all.

What pleases us far more is the treatment of the question how far early Roman history and culture were moulded by Sikeliot and Italiot influences, either directly, or through the intervening native tribes; for these terms, as is well known,

are confined to the Greek settlers in the "two Sicilies." Here Prof. Pais is at his best, and supplies most interesting information, from ritual, from legends, and from economics, about the early and potent effects of this Greek culture upon the whole frame of Roman life.

He rates the influence of Syracuse very high, and thinks that, both directly and through her stations on the coast (such as Ischia), Syracusan wares became quite familiar among the Romans. The emendation by which he makes the people of Ischia prosperous not through gold-mines, but through potteries (*χυτρείων* for *χρυσείων*), seems to us convincing. But it would have been still more interesting if he had told us whether this Ischian pottery was a close imitation of Attic or Syracusan, for much of the so-called Attic pottery found in Etruscan tombs might prove Sikeliot after all. He provides no analysis of the clay on the island. So much, however, does he attribute to early Greek influence on the laws and the military organization of Rome that we feel there is hardly any room left for the Etruscan models, which were thought so important by earlier historians of Rome. We wish that in one of his miscellaneous essays he had discussed the splendid archaic Greek chariot, found somewhere near Palestrina, which now adorns the Central Museum in New York; for that is an amazing instance of early Greek work found in the very heart of Latium.

Prof. Pais goes even further, and thinks that early Latin writers on the period before the Gauls captured Rome, and the archives were destroyed, actually copied passages from the life of Syracuse or Gela, and passed them off as genuine Roman annals. We think this a most hazardous path to tread, even though some encouragement for it is provided in the speculations of Mommsen. It is not at all good reasoning to say that, because there are many similar circumstances in two narratives, and even some similarity in names, therefore we have nothing before us but a duplicate account of a single transaction. Suppose, for example, that there were two secessions of the Roman plebs, is it not natural that the second should show features similar to the first, and that even the names of the principal actors might be inherited by the mutinous grandsons of mutinous grandfathers? Why not? We may further urge that the Syracusan events from which Prof. Pais thinks the Roman historians took their sham narrative differ in important features from the so-called copy; neither do the legends nor the names show any sufficient agreement. In this matter we therefore tax the author with having given way to the bad example of the most artificial German theorists. Here is his statement:—

"The first secession of the Roman plebs in 494-3 B.C. resembles in its essential features the secession of the Geomori of Syracuse in 487, with this difference, how-

ever, that at Syracuse it was the patricians, and at Rome the plebs, that abandoned the city."

But at Gela the plebs seceded, though the other features are unlike. What are we to make of such an argument?

The translator's work is by no means above criticism. "Livy, Ennius, and Pacuvius" is a curious way to disguise Livius Andronicus. There is a wrong date on p. 316 (466 for 446). The words "locate" and "location" are used with distressing frequency. But we will not trouble the reader with such trifles, and conclude by repeating the expression of our respect for Prof. Pais's scholarship.

Lollardy and the Reformation in England: an Historical Survey. By James Gairdner. Vol. III. (Macmillan & Co.)

IN an Introduction of singular modesty, Dr. Gairdner apologizes for various errors (mostly of a trifling character) in his first two volumes on 'Lollardy and the Reformation.' He goes so far as to supply two or three pages to take the place of certain leaves which he desires to cancel.

On one point we are sure he need not have troubled to make detailed corrections, namely, in his summary of what took place on the suppression of the monasteries and their general character; for it is recognized that Dr. Gairdner has long ago established a reputation for fair and unbiased dealing with the difficult problems of those days. Moreover, no other scholar has such a complete mastery at first hand of all the documents concerning those proceedings.

In continuing his subject in this third volume the author at once acknowledges that historians are right in seldom speaking of "Lollardy" after the days of Henry VIII. Another name, "the New Learning," had been invented for what was essentially an old thing:—

"Old Lollardy, in short, having helped Henry VIII. to put down the Pope, and having been unmuzzled for that very purpose, could not but get its own way in some things with the King's powerful protection. But it must not be called Lollardy or heresy any longer; it was a New Learning, different from that of the schools, for which the King and Cranmer bespoke a fair hearing. Under Edward VI., therefore, and also under Elizabeth, we have to see how this new learning comported itself, having authority so much in its favour."

The chapters of this volume are divided into two sections, to which the well-chosen titles of 'Juvenile Supremacy' and 'Lollardy and Power' are respectively applied. The death of Henry VIII. brought about a momentous crisis in the history of England both in Church and State. Many expected, and not a few desired, the restoration of the old papal sovereignty over the Church of England, when they saw the ecclesiastical supremacy transferred from a man of

powerful intellectual attainments and headstrong will to a sickly boy of little more than nine years of age, whose religious education had been precociously forced. Everything turned, in the eyes of sensible folk, not upon what this child would do, but upon what power would effectually surround the child-sovereign. Amongst the nobility, the Seymours were the nearest to the throne in blood-relationship. The only other great families who could claim relationship to the dead King were the Howards and the Parrs. Neither of them, however, was related in blood to his son Edward, and in both cases their relationship to King Henry had been singularly unfortunate. It therefore came about that political power naturally fell to the Seymours, and chiefly to Edward, Earl of Hertford, the elder of the young King's uncles. The Earl of Hertford and Lord Lisle had become prominent figures at Court about the time when Katharine Parr was promoting heresy whenever it was safe. These two lords did not hesitate to avow their hatred of bishops, and they were in the habit of using abusive language towards leading Catholics such as Bishop Gardiner and Chancellor Wriothesley. Hertford's claims to become Protector or Regent were naturally very strong, and by the exercise of considerable astuteness and cunning, in his dealing with Paget, the late King's secretary, he made his position at the outset almost impregnable. They contrived to keep the old King's death secret for three days, whilst the Earl repaired to the young Edward at Hertford and brought him up to London. Parliament was told of the death on January 31st, and during the day, the accession of Edward was proclaimed. On the morrow Henry VIII.'s remarkable will was read, and the sixteen executors made oath to the faithful observance of its provisions. By this will, made just four weeks before his death, Henry besought the prayers of the Blessed Virgin and the whole company of the saints, and made elaborate provision for continuous masses for his soul. As to the succession to the throne, he provided that it was first to go to his son Edward, and, in default of issue, in the next place to his daughter Mary, and subsequently to his daughter Elizabeth. The executors, with Archbishop Cranmer at their head, were to manage both the private affairs of young Edward and the public affairs of the realm until he had completed his eighteenth year.

Edward Seymour, through cajolery and bribes, soon succeeded in gaining almost complete control over his fifteen brother-executors. They permitted him to create himself Duke of Somerset, and to be styled "Protector of the Realm and of the King's person." No sooner had Somerset seized the reins of power than he deliberately abandoned the middle course of Anglo-Catholic policy which Henry had adopted, and threw himself completely into the hands of the Protestants. Dr. Gardiner shows considerable ability and a full mastery over a great variety of somewhat conflicting evidence in tracing the progress

of innovation, and the success which for the most part followed the suppression of the serious revolts against the definite upholding of the New Learning, and almost all outward forms of Catholicity. The relations between England and the Council of Trent are also set forth in an admirably clear style.

Under the general heading of 'Lollardy and Power,' the characters and acts of Warwick, Gardiner, and Cranmer are patiently discussed, with the result that Bishop Gardiner appears in a very different light from that in which he has been depicted by historians who have relied upon the descriptions of his bitterest enemies. The other chapters deal with 'The Episcopal Revolution and Bishop Hooper,' 'The Destroying of the "Altars of Baal,"' and 'The Great Conspiracy.' Under the last of these titles close examination is made of the elaborate *Reformatio* scheme of 1553.

It will, we believe, be readily admitted by all fair-minded persons that a considerable debt of gratitude is due to Dr. Gairdner for dealing so faithfully and conscientiously with the remarkable religious phases of the reign of the boy-king.

La Vie de Tolstoi. Par Romain Rolland.
(Hachette & Cie.)

Two great literary names have just signed appreciations of Tolstoy. Romain Rolland has published a volume on him as one of his series of "Vies des Hommes Illustres," and Mr. G. B. Shaw has written in *The Fabian News* an article on the Russian writer, founded on Mr. Aylmer Maude's 'Life of Tolstoy.' Mr. Shaw's misunderstanding of Tolstoy stands in the greatest contrast to the illuminating insight of Rolland. Mr. Shaw seems to have judged Tolstoy by the standards of suburban villadom, and his article might be called 'Tolstoy as a Failure.' Mr. Shaw apparently sees nothing but Tolstoy's inconsistencies, and the inconvenience caused to his wife and children by his spiritual development. All the drama of a great soul wrestling with itself, fighting its way step by step towards the light, stumbling, falling, but ever rising again to make another effort—all this Mr. Shaw has passed by, as though his eyes and ears were spiritually defective, and it is to the French writer that we must turn for understanding and explanation. Romain Rolland has in his former works given proof of his power to throw himself into the personalities he describes and to portray their inner life, but in dealing with Tolstoy he surpasses himself.

His literary criticism of Tolstoy as a novelist is well worthy of study. He is far from reproaching Tolstoy for the mass of detail which is so often criticized by European writers, but which gives the fullness and freshness of life to his work, and deepens the general impression:—

"To feel the power of 'War and Peace' you must realize its latent unity....must

rise to a certain height and get a view of the wide horizon, of the belts of forests and fields. Then you will see the Homeric nature of the work, the calm of eternal laws."

But it is not in literary criticism that the main value of the book lies, nor does the author divide Tolstoy the novelist from Tolstoy the moralist. Indeed, he condemns the habit critics have of speaking of two Tolstoys, "celui d'avant la crise, celui d'après la crise; l'un est le bon, l'autre ne l'est point." He goes on to say: "Pour nous, il n'y en avait qu'un, nous l'aimions tout entier, car nous sentions d'instinct que dans de telles âmes tout se tient, tout est lié."

Indeed, Tolstoy is remarkably one in his life and work. The germs that ripened gradually can be traced back to his infancy; in every book there are proofs of his chief characteristics—his capacity for freeing himself from modern influence and tradition; his combination of intense realism with the highest idealism; his feeling of brotherhood with all with whom he came into contact; and his optimistic faith in the inherent goodness of mankind.

It is with a delicate and restrained hand that Romain Rolland touches on the great struggle of Tolstoy's inner self and the difficulties of his family life that ensued.

Tolstoy was seeking for his God, and knew that the path was a lonely one: "You say it is easier to go together. How? To plough, to mow—yes. But one can only approach God alone." So he writes in a letter of 1901. He had not only to fight his way along in solitude; he had to suffer from the lack of comprehension and reproaches of his family, his friends, his critics, and it is in answer to these that he wrote one of his most beautiful letters:—

"I am dying of shame, I am worthy of contempt. Still, compare the life I led formerly with the one I lead to-day. You will see I am trying to live according to God's law. I have not done the thousandth part of what I should have done, and I am ashamed. But I have failed, not because I would not, but because I could not. Blame me; do not blame the path I follow. If I know the road that leads me home, and if I stumble along it as though I were drunk, does that show the road to be the wrong one? Either show me another road, or help me along this one, as I am ready to help you. But do not push me away, do not rejoice in my distress, do not cry out ecstatically: 'See! he says he is going home, and he falls into the ditch.' Do not rejoice, but help me, uphold me!... Help me! My heart is breaking with despair that we are all straying; and when I try to walk, at every stumble you point at me, you cry: 'See! he falls into the ditch with us!'"

Tolstoy devoted all his unrivalled powers to fighting the falsehoods and misconceptions of modern society, attacking all hypocrisies—of religion and State, of science and art, of Liberalism, Socialism, popular instruction, and charity. But the last thirty years of his life were spent in a harder fight than that against social

evil—that between the two greatest forces of his soul, Truth and Love. Truth was the queen of his art; he writes himself: "The heroine of all my writings, whom I love with all the strength of my soul—who always has been, is, and will be beautiful—is Truth."

But "the horrible truth" had not sufficed—Love had "supplanted it." It was "the natural state of his mind." Love is the "basis of energy, the reason for life"; love is the very essence of Tolstoy, matured by life.

It is this penetration of truth by love that is the most valuable side of Tolstoy in the eyes of his biographer. But it is difficult to maintain the union of the two great forces.

"Who," asks Rolland, "will say how much Tolstoy suffered from the continual discord during his last years between his pitiless eyes, which saw the horrors of reality, and his impassioned heart, which continued to expect and to affirm love?"

For those proud intellectuals who have found the solution of all the great enigmas of life Tolstoy is but a weak sentimentalist, and cannot serve as an example. "But," says Romain Rolland in concluding his admirable study,

"Tolstoy does not belong to a conceited élite, he belongs to no church. He is the highest type of free Christian who aspires all his life to an ideal which is always moving higher. Tolstoy does not speak to the aristocracy of thought, he speaks to ordinary men—*hominibus bonæ voluntatis*. He is our conscience; he expresses what we mediocre minds think, and what we are afraid to find in ourselves. And he is not a master full of pride, one of those haughty geniuses who are enthroned in their art and their intelligence above mankind. He is known by [what he liked to call himself in his letters] that sweetest and most beautiful name, 'our brother.'"

NEW NOVELS.

The School of Love. By Priscilla Craven.
(Werner Laurie.)

THE author of this story is no suffragist: indeed, her opinion of women seems almost worse than her views concerning men, whom she judges from too low a moral standpoint.

Most of her characters are smart conversationalists, but her fund of sparkling dialogue cannot always supply the resulting demand upon it. Commonplace, therefore, rubs shoulders with brightness, and certain flashes of wit, as well as the parodies of Scripture, which come from a famous but pietistical hostess, are in questionable taste.

The American heroine whose dollars are to renovate the ancestral home of Sir Burford Rees, is the daintiest "littlest creature," as he calls her. When she marries him she is not entirely ignorant of his past; but his citation an hour or so after the wedding as co-respondent in a divorce case is too much even for her philosophical upbringing. The incidents which follow must be left to readers.

The Pieces of Silver. By Nora Vynne. (A. Melrose.)

THIS clever and sanely conceived feminist novel would have been better from the point of view of literary art, and also of interest, had the author not fallen into the pit-fall of controversy. Her handling, although conscientious, is a little heavy, and much of the matter is better suited for a political tractate than the pages of a story. The heroine, who is a hard-working journalist and politician, is pleasantly drawn, and no reader will grudge her the eventual success and happiness she finds after the humiliation inflicted on her by a mercenary lover. Certain of the incidents are somewhat unconvincing, while there are *longueurs* that seem hardly necessary; moreover, the narrative suffers slightly from disjointedness, together with a too ponderous proximity. Apart from these defects it is an interesting book, sincerely and seriously written.

The Pawns of Fate. By M. A. Ross. (Harper & Brothers.)

THIS novel is mainly concerned with matrimonial alarms and excursions, mostly infelicitous, albeit with happy endings. There is, moreover, a glimpse of the half-world, with a dash of philanthropy to vary the programme. The characterization is negligible, but the plot shows some ingenuity, while the writing is crisp and easy, and gods descend from machines with opportune and commendable alacrity. On the whole, it may be recommended as a readable book for an idle hour.

A Woman of Small Account. By Mary E. Martens. (Walter Scott Publishing Company.)

As a picture of life in a Boer farmhouse in Natal this novel is decidedly interesting; but it loosens its hold on the reader when it deals with the heroine's crusade against the immorality caused by the attraction of the African native girl for the white man. The heroine is the wife of an English lawyer, and is introduced to us as the ruling female in the household of a despotic Boer widower, who takes for his third wife a Boer servant whom she dislikes, and who dislikes her. The novel contains an effective example of the bitter bit in the person of a lady-killer whose written dismissal of one of his victims is employed against him. The Boer characters are cleverly sketched and differentiated.

Zarya. By Dixon Scott. (John Long.)

THE author's description of ingenious cruelty is likely to haunt the mind of the "gentle reader" in this romance of the Caucasus; but his manipulation of local colour is so masterly, and

his power of suggesting the joys of art and love so considerable, that it would be unfair to class him among the purveyors of horror. His English hero is a clerk and a player on the piccolo, who falls in love with his Italian employer's daughter in a Caucasian town of which the Governors are, successively, an infamous rascal and a man of honour and courage. Part of the action concerns the antagonism between a band of worthy outlaws—capable of loyalty to a just government—and a band of expropriators whose abominable offences might have remained unpunished if their accomplice (the evil Governor) had not been killed in ambush. Verse and anecdote ornament the story, of which the heroic passages show that the author is on the side of St. Michael.

The Phantom of the Opera. By Gaston Leroux. Translated by A. T. de Mattos. (Mills & Boon.)

M. LEROUX is one of the most ingenious and spirited of mystery-makers, and his 'Secret of the Yellow Room' deserved its great success. His present effort, though excellently translated, does not please us so well. The style of the book is neat, and there are some ingenious surprises, but the whole story of the ghostly man who lives beneath the Paris Opera-House and bullies its managers into recognizing his right to a box seems to us rather laboured, while the details of his later nefarious doings are piled up to a mechanical plethora which does not convince us. We prefer M. Leroux when he makes wonders out of more ordinary surroundings.

AFRICA AND AUSTRALIA.

An Englishwoman's Twenty-Five Years in Tropical Africa: being the Biography of Gwen Elen Lewis, Missionary to the Cameroons and the Congo. By George Hawker. (Hodder & Stoughton.)—Twenty-five years ago the region which has acquired notoriety as the Congo State was almost an unknown country, associated chiefly with the adventurous explorations of Stanley, and (within a narrower circle) with the heavy death-roll of the Baptist and Livingstone Inland Missions. The former of these bodies has been long and honourably connected with West Africa, the work of Saker and Merrick in the Cameroons dating back to 1844. Mrs. Lewis, the subject of the Memoir before us, began her African career at the latter place, though she had previously looked forward to work on the Congo—had, indeed, been betrothed to one of the pioneers in that mission, John Hartland, who died in 1883, on the voyage home. The deaths which followed one another with such appalling swiftness in those early years must have been due chiefly to inexperience; a better understanding of the country and its conditions has certainly brought about an improvement in this respect. Mrs. Lewis, thanks to a splendid constitution and admirable common sense, worked on untiringly till 1909, and her husband still

survives; while Bentley and Grenfell died, one in 1905, and the other in 1906.

The biography, and the letters and diaries embodied in it, set before us a quiet, steadfast character, achieving success by conscientious care for details, not conspicuous, perhaps, for the more superficially attractive qualities, but one of those fixed stars of daily life round which its affairs naturally revolve in ordered progress. It may be thought that, to produce the effect which she undoubtedly did on the people among whom she worked so many years, Mrs. Lewis must have had more sympathetic charm than the author has succeeded in conveying in cold print. This may well be; but it must not be forgotten that the African, undemonstrative, as a rule, himself (contrary to the common opinion), does not look for, perhaps does not respect, a high degree of emotional excitability in his friends. The qualities he does value beyond all others are justice and dependableness, and the man or woman of whom he can always be sure—as was the case with Mrs. Lewis—can usually be sure of him.

Her influence with the women of São Salvador, in the twelve years during which she was attached to that station, proves this no less than the uphill work at Kibokolo, or the fruition of long-cherished hopes and patient labours (enjoyed, alas! for too short a time!) in the Kimpese Institute.

Apparently (and though she may have modified her views in later life, we have no indication to that effect), Mrs. Lewis shared the old-fashioned standpoint from which all "heathen" customs and institutions are necessarily evil and degrading. She writes from São Salvador in 1894:—

"...When we look around and see just our two selves and our fellow-missionary, with every other influence, in the place and about it for hundreds of miles, telling against truth and righteousness."

In 1903, at Kibokolo:—

"The old chief of this district came the other day, or rather sent to say that he was outside the station and wanted Tom [Mr. Lewis] to go to him, as he had 'eaten nkisi'.... Tom sent word that if he wanted him he must come in, as he had nothing to do with his nkisi palavers. So he and the other men came just inside, to where our new house is, and had a long talk; but there is no doing anything with these people. They wanted us to guarantee that no Makela man should come any nearer than Nkila nkosi's town."

They may have thought that a stranger, capable of setting aside, in such a high-handed way, the solemn obligations of *nkisi*, would be equal to any other demands made upon him. In any case, their coming in so readily is somewhat surprising, and perhaps, though it would be rash to dogmatize, justifies the stranger's attitude.

Mrs. Lewis does not seem to have seen any difference between lawlessness and violence, such as the natives themselves would recognize to be wrong (as in the case of the man referred to on p. 141), and such things as funeral rites (p. 166) or the Nkimba custom, which, however objectionable to our ideas, have their roots in the past and a sociological reason for their existence. It is not merely a misplaced zeal for science that would deprecate rash iconoclasm in this direction.

Against this, however, we must set the passage on p. 112, where the question of polygamy (*i.e.* of the baptism of women who are "plural wives") is wisely and temperately dealt with, and the practice of the Mission in this respect approved.

A minor matter, in comparison with the serious subjects above referred to, is the

curious fact that Mrs. Lewis appears to have been insensible to that glamour of Africa which casts its spell even over many incapable of giving it articulate expression. The ruins of the São Salvador Cathedral are "the only pretty thing in the place." Kongo is

"a very ugly language, I think, in sound and appearance. But Holman Bentley thinks it lovely....When he was here, I was wicked enough to remark that I thought it very unmusical, whereupon he replied, in severe tones, 'It has all the elements of a beautiful language.'"

This judgment—not Bentley's—on a Bantu tongue is passing strange. But the remark is not made in disparagement. It only illustrates the self-sacrifice, the plain devotion to duty, of a woman who neither had nor needed any illusions to help her along the pathway of life

My Journey from Rhodesia to Egypt, including an Ascent of Ruwenzori and a Short Account of the Route from Cape Town to Broken Hill, and Lado to Alexandria. By Theo. Kassner. (Hutchinson & Co.)—The object of Mr. Kassner's journey through Africa was twofold—"to ascertain what parts of the interior are suitable for white settlement, and calculated by climate and natural resources to furnish a livelihood for the pioneer," and "to collect specimens of geological, botanical, and zoological interest." With regard to the first point, he seems to have been fairly well satisfied with the possibilities of the Congo State, in a large part of which territory "the land is much better suited for white settlement than is the land of South Africa." A chapter is devoted to the administrative methods of that State, which are also discussed on pp. 37-42. But in rebutting the charges made against it, he makes no allusion to the two fundamental evils complained of—the system of concessions and the method of payment by results; his position being that individual delinquencies "were isolated acts of men elevated to an authority which they abused, and were in no sense a feature of administrative policy" (p. 266). Elsewhere (p. 38) he seems categorically to deny even these individual cases of cruelty, on the ground that the officials, all of whom are Europeans, "and most of them are gentlemen," would be incapable of such things—yet, a page or two later, he guards himself by saying that his "vindication....must not be taken on too wide an interpretation." The last chapter deals with the familiar theme of the idle native who cannot be "allowed to vegetate on a land whose resources he does nothing to exploit"—the author apparently forgetting that he has described the Wanyarunda as "energetic agriculturists," and accorded similar praise to at least two other tribes.

Some little-known areas were traversed—e.g., the Kundelungu Mountains, near Lake Mweru, and the country west of Tanganyika; but Mr. Kassner has little that is illuminating to the expert. His ethnology is somewhat vague, and he has an irritating habit of giving names both a Bantu and an English plural, as "the Balundus" (=Warundi?).

The book reads like a translation from the German, though there is no hint that such is the case. If it is an original effort in an acquired language, it must be owned that the result is highly creditable to the author; yet it seems odd that being, as we gather, something of a geological and mineralogical expert, he should persistently call the Rift Valley the "African Graben," and be unable to find an equivalent (p. 186) for "Schwefelwasserstoff." Some of the numerous photo-

graphs are artistic, others gruesome enough, though on too small a scale to produce their full effect. Finally, we owe Mr. Kassner a word of thanks for his moderation in the matter of big game: "I shot only for the pot, and to save and protect human life. The reader who looks for sporting adventures in the pages that follow will be disappointed."

Sunny Australia: Impressions of the Country and People. By Archibald Marshall. (Hodder & Stoughton.)—From the student's standpoint, or that of the serious searcher after knowledge regarding the island continent with which it deals, this book is curiously unsatisfying and ineffective. The reviewer, who has spent a good many years in different parts of Australia, read these pages perseveringly, in quest always of an illuminating phrase or thought which should really convey some definite picture or idea of Australia, or of some aspect of its life and development. The quest was vain; but many readers may thoroughly enjoy the volume. From first to last it consists of gossip. It is curiously personal; and some travel books possessing that quality have been delightful. A touch of genius or the influence of an exceptionally lovable personality has made them so.

"He does not profess to have a thorough knowledge of Australian agriculture, and contents himself with transferring to the printed page what he saw through the eye of a trained journalist,"

says Sir George Reid in the few kindly lines introducing the book. The author calls the first half of his work 'Recollections,' and the second half 'Impressions.' The 'Impressions,' we gather, were published in *The Daily Mail*, for which journal Mr. Marshall visited Australia in 1909 "to write about what he saw there." They are republished "in the form in which they were written." To be frank, the reviewer finds himself incapable of awarding praise to them in this form. The 'Recollections' mainly of the generous hospitality everywhere extended to their writer make agreeable reading for those who like this sort of personal gossip. Sir George Reid may be correct in his surmise that the book has qualities which will make it "a success both at home and abroad." We hope it may prove so, since anything which helps to stimulate and strengthen the interest of English people in the lands and lives of their kindred oversea is something to the good.

CORONATION LITERATURE.

The Great Solemnity of the Coronation of a King and Queen, according to the Use of the Church of England. By Douglas Maclean. (Allen & Co.)—The reissue of Canon Maclean's Coronation manual has given the learned author an opportunity of making several important alterations and improvements. Those who used the former edition in 1902 realized that the book was by far the clearest and most scholarly of the smaller treatises on the subject, but the poverty of the Index was a great drawback. That defect has now been adequately remedied. Among the new features are the Coronation Order of George V. and an account of the "hallowing to King" of Edward VII. There is also an excellent system of reference numbers in heavy type, connecting the various stages of the service with the historical and critical notes. These are admirable in their condensation of the most important facts.

The binding of this cheaper edition is neither so interesting nor so beautiful as that of its predecessor (described by Mr. Davenport), and one regrets to learn that part of the first edition was destroyed by fire. The accident has, however, been contributory to the remodelling of a valuable book. It is somewhat curious that a work of purely antiquarian and ecclesiastical interest should here and there come perilously near the tone of a High Church tract. It may thus, as the Bishop of Salisbury says in his Introduction, "serve a double purpose." We suspect a misprint in *leis* and *leys* for *lois* and *loys* in the transcript of the Plantagenet Oath, but the intention may be to reproduce a clerical error as it stands in the original.

The Coronation Book; or, The Hallowing of the Sovereigns of England. By the Rev. Jocelyn Perkins. (Pitman.)—The new edition of Canon Perkins's popular account of English coronations contains the text of 1902, unaltered, together with fresh material relating to the coronation of Edward VII. Regarding the earlier part of the volume there is not much to be said at this date. It contains little that is not familiar to those who have been called upon, by the exigencies of special study, or the interests of the moment, to master the authorities, chiefly the scholarly works of Mr. Wickham Legg, the minute and curious, if archaic 'Glory of Regality' by Taylor, and the copious farrago of Jones, although, of course, the author has consulted many others. But Canon Perkins appeals to the general reader, who will find given in a pleasantly selective and readable fashion all that he may desire to know. The coronation ritual is in itself of more than ordinary interest, and some understanding of its complex history and significance is a thing by no means to be despised at the present time. Without it, many of the none too accurate descriptions, allusions, and comments, now flooding the press, are puzzling, if not unintelligible. It might, however, have been advisable to make a few slight alterations in the existing text, as for example, in the chapter on the Regalia, in view of the recent resetting of Crown and Sceptre with portions of the Cullinan diamond. Under the heading of the Vestments, too, one would have preferred a little more clearness and order, so that the uninformed reader might understand precisely the three major changes: scarlet Parliament Robe worn on entering, Imperial Mantle of cloth of gold for the supreme moment, and purple royal robe for the Recess.

The new matter is chiefly valuable as the account of an eye-witness, and that eye-witness the Sacrist of Westminster himself. It is to such documents that the student of former coronations turns with most confidence in after years, and Canon Perkins's picturesque description of the Sacring of Edward VII. may in time to come take its place with Walpole's notes on the Coronation of George III., and Sir Walter Scott's on that of George IV. The writer emphasizes the manifestation of loyalty to the crown as that consummation devoutly wished for in Sydney Smith's sermon on the birth of Victoria. He keeps in view, too, the development of the Imperial ideal. There are six Appendixes, of which that on the Banquet of George IV. is not unfamiliar. The most interesting is the note of arrangements for the music at Queen Victoria's coronation.

Mrs. Temple Perkins contributes to the illustrations, which are numerous. Her best drawing is the little vignette of the

entrance to the Jerusalem Chamber, a study that escapes, better than the others, the betraying marks of the amateur.

The Coronation Record Number of *The Illustrated London News*, edited by Mr. Bruce S. Ingram, is well worthy of the traditions of the paper. There are twenty-four coloured plates, while the letterpress is of historical interest, and opens with an illumination from the 'Liber Regalis,' the Coronation Order of Richard II. A description and illustrations are given of the Coronation medals from Edward VI. to Edward VII., also of the golden eagle, the orb, and the bracelets. Among the portraits which appear round each page of letterpress are those of men associated with the government of Britain beyond the seas.

The Special Coronation Number of *The Sphere* is brightly and lavishly illustrated, and strong in its historical detail. The record of 'King George's Predecessors' includes effective reproductions of several notable pictures, while the details of next week's ceremony are well presented. We are pleased to see some pages by experts concerning the vigorous Britain beyond the British Isles.

The Sketch Coronation Souvenir Number is also full of coloured plates. The letterpress, as in *The Illustrated London News* and *The Sphere*, has its special features, and the article entitled 'The Lighter Side of a Great Solemnity' gives an illustrated account of a tight-rope performance during the progress of Edward VI. An illustration is also supplied of the last platform procession, that of George IV. Under Coronation Music a page is devoted to portraits of composers represented in the Abbey service.

The Coronation Number of *Punch* appears with the well-known cover in colours with a green-and-gold border. The general effect of this seems to us somewhat crude. The editor combines dignity and humour in his usual polished style in his introductory verses 'To the King.' The best of the other bards is "Dum-Dum" on 'The Coronation Chair.' Eminent Georges are neatly hit off as well as other notabilities, and comments on journalism are prominent, as usual.

The Ladies' Field Coronation Number is certainly well up to the average of others received, and possesses a distinctive feature in the reproduction of a number of National Anthems.

OUR LIBRARY TABLE.

Biographia Epistolaris: being the Biographical Supplement of Coleridge's Biographia Literaria. With Additional Letters, &c. Edited by A. Turnbull. 2 vols. (Bell & Sons.)—A collection of all Coleridge's copyright-expired correspondence would form a useful appendage to the invaluable 'Letters' of 1895, while even a selection, if thoroughly representative, could not fail to be interesting; but these volumes are neither one nor the other. The editor reprints the desultory 'Biographical Supplement' of 1847 ('Biogr. Lit.', 2nd ed., vol. ii.), and into this narrative he dovetails in order of date a good many, but (with all due respect) by no means "all the non-copy-right letters available from other sources" (Pref., p. vi). Cottle and Allsop are evis-

cerated, Davy's 'Fragmentary Remains' rifled, a batch of nine letters to Godwin taken from *Macmillan's*, and a few others addressed to Southey, or printed in his 'Life of Dr. Andrew Bell,' added, by Mr. Turnbull. But no attempt is made to relieve this familiar and sometimes ponderous material by inserting the fugitive letters which lie buried singly or in small groups in biographies and journals earlier than 1850, interesting though many of them are to the student of Coleridge's life and literary attitude. The small but important series addressed to Mudford, for instance, does not figure here—nay, is not so much as mentioned. Now Mr. Turnbull must surely have read Dykes Campbell's 'Life,' in which Mudford's name occurs more than once—he was, for a time, sub-editor of *The Courier*—and passages are cited from the series in question, printed by Mudford ("Geoffrey Oldecastle") in *The Canterbury Magazine*. How comes it then that the very name of Mudford does not once appear in these volumes? Again, the long letter on the ballads of Bürger written to, and printed in Robberds's 'Life' of William Taylor of Norwich—why has not Mr. Turnbull given us this? And where is the letter to George Dyer, printed in *The Mirror* of 1841; where that playful arraignment of Charles Lamb as author-suspect of the 'Odes and Addresses to Great People,' of the very existence of which, though printed in 'Hood's Own' (1839), and reproduced in the 'Memorials of Thomas Hood' (1860), Mr. Turnbull must yet, we suppose, be held unaware?—even as, for anything his pages show to the contrary, he may be ignorant of the existence of those intimate effusions, the Estlin Letters, privately printed by the Philobiblon Society.

As a repertory of the whole available correspondence then, these volumes simply belie the promise of the editor's Preface; as an assemblage of representative examples they are at once redundant and defective, omitting several letters of literary or biographical interest, while they include some which have no claim to figure in a representative selection. Coleridge's epistolary pen is not always happily or worthily employed; too often it is sorely exercised to frame a plausible excuse for the omission of a manifest and urgent duty. When, for example, in the course of an ingenious apology for his neglect to revise Dr. Bell's proof-sheets, he is led to exclaim, "O dear Dr. Bell, you are a great man! Never, never permit minds so inferior to your own, however high their artificial rank may be, to," &c., we hardly know whether to groan or laugh over the desperate shifts to which an invincible indolence may reduce the philosopher. At times he "doth protest too much"—as where he confides to Allsop, just then in the pride of recent paternity, that his "lips feel an appetite to kiss the baby."

It must be added that of Sara Coleridge's contribution to the 'Supplement' not a little—in particular, the gentle swordplay with De Quincey and the truculent Hazlitt—is of ephemeral interest. This, if reprinted at all, should have been supplemented with her elaborate 'Prolegomena' to the 'Biographia' of 1847. Of Mr. Turnbull's Introduction and occasional additions to the narrative it is impossible to speak favourably: what we desiderate for Coleridge is not apology, but the fullest, frankest, best informed criticism—such criticism as the student will find in the admirable chapters, all too brief, of M. Joseph Aynard's 'Vie d'un Poète' (Paris, 1907). One thing, indeed, Mr. Turnbull tells us which we cannot recall having seen elsewhere—that 'The

Picture; or, The Lover's Resolution' (*Morning Post*, Sept. 6, 1802), is "a paraphrase of one of Gessner's Idylls"—of which of them he does not say.

A DISTINCTION is made by Sir A. Conan Doyle between the contents of *The Last Galley* (Smith & Elder): he divides it into "Impressions" and "Tales." The tales declare their own character, but the impressions he describes as experiments, "trial flights" towards the imaginative handling of a large historical theme, in which the fascination should be in "the actual facts of history themselves" rather than in any one or more human beings. We are afraid that the human mind will continue to demand the human interest in fiction. But apart from that the "ideal" is not new, and has been undertaken by various writers in the past. Judged on their merits, these "impressions" are vivid and forcible, reimagined and refitted scenes from ancient history. One which is most obviously, and even ostentatiously, a parable deals with the downfall of the Carthaginian power—"de te, Britannia, fabula narratur." It is correct, but is vitiated by its design as a tractate. 'The Contest' is a slight excerpt from a possible life of Nero. 'Through the Veil,' which has its effectiveness, challenges comparison with Mr. Kipling's famous 'The Finest Story in the World,' relying as it does on the theory of reincarnation, and challenges in vain. Other pieces in this section are on the level indicated, both in conception and in execution. They stimulate curiosity as to what Sir Arthur will achieve on his large canvas.

The other tales are in his more characteristic vein, and are various in subject. One might have expected to find such a story as 'The Terror of Blue John Gap,' which reveals the author in his strength and weakness. 'The Silver Mirror' is hardly a success; and 'The Blighting of Sharkey' just falls short of the horror it should inspire. Our old friend the Brigadier Gerard turns up again in a sentimental episode. 'Out of the Running,' a story in which Sir Arthur employs modern average English materials, is entirely commonplace, as is also 'The Great Brown-Pericord Motor,' which has all the marks of popular acceptance in a popular magazine. 'De Profundis' is not a very arresting story of the quasi-supernatural. It is evident that Sir Arthur's own interest is mainly in his "impressions," the range and pitch of which are superior to those exhibited by the stories which with them compose this volume.

A Budget of Tares. By Austin Philips. (Smith, Elder & Co.)—If the evident facility with which he writes does not prove too dangerous a pitfall for Mr. Philips, we may presently be able to welcome him to the select band of English masters of short-story writing. The fifteen tales in the present volume all show ability, and some of them originality, and glimpses of the insight which makes, under discipline, for mastery. But there must be more of discipline yet, and of patient foundation-laying. There is promise in this book which should make the discipline well worth while, even though—as it surely would—it led to the sort of sacrifice which would have laid aside perhaps forty or fifty per cent of 'A Budget of Tares.' The stories have the merits of directness and simplicity.

The Position of Woman, Actual and Ideal. With a Preface by Sir Oliver Lodge. (Nisbet & Co.)—This well-intentioned

volume consists of a series of lectures, few of which are altogether solid enough to bear the test of reproduction. The authors—whose names, by the by, ought to have been given in the Table of Contents as well as on the book's paper cover—do not appear to speak from much direct personal investigation, and are consequently prone to those generalities which encourage prejudice and hamper clear thinking. Behind general statements, tacit assumptions are apt to lurk; and of fully half these papers the following assumptions form the basis: (1) That there exist marked inherent differences between men and women; (2) That these differences are beneficial and should be fostered; (3) That the prime object of all training for all women should be to fit them for family life; (4) That family life and "the home" must always retain their present form.

Of original thought there is scarcely any, except in the paper upon education by Miss Frances Melville, which makes a serious attempt to balance the value of the two elements—the domestic and the professional—in the education of women. She, unlike most of her colleagues, maintains that we do not know, and at present cannot know, what natural and inherent differences there are between men and women, nor whether, indeed, there are any. "We all know," she remarks, "how easily a custom of forty years' standing is held to be a law of nature"; and her perception that we cannot distinguish between real and artificial "laws of nature" draws from her the wise suggestion that we should avoid during school age "the making of bias in the direction of any particular life, by trying rather to make reason active, to cultivate its application to practice, to stimulate the imagination, to give the seeing eye and the trained muscle"—all desiderata in the education of boys no less than girls. Miss Phoebe Sheavyn, who writes on 'Professional Work,' would, on the contrary, import a sex-bias into education, apparently almost from infancy. "In my personal opinion," she says, "no period is too early in which it can be shown that special aptitudes exist and can be utilized or modified." One would like to catechize Miss Sheavyn as to how these special aptitudes are to "be shown" to exist; how she would decide concerning each whether it was a personal or a sex aptitude, and by what means she would distinguish which of them were evanescent aptitudes, such as appear in all intelligent children, and which of them were likely to be permanent.

The lady who deals with 'Woman in the Family' says, unhesitatingly: "It is, of course, very undesirable that a moneyed girl should take the bread from a girl who is wholly dependent on her employment." To the present writer this is unsatisfactory in view of the economic axiom that the more persons work for their living, the more bread there will be all round. Not the men and women who work for money so much as the men and women who consume without working are the people who "take the bread from" their fellows who work. The "moneyed girl" does not hurt her sister workers so much by following even the most overcrowded of callings as by living idly on the money that represents somebody else's labour. In regard to men these truths are fairly well recognized: nobody dreams of telling the "moneyed" youth that "of course it is very desirable" he should not work for remuneration; but the intellectually vicious habit of regarding women as creatures different from men makes it

possible even to suppose that their doings are subject to different economic laws.

Generalities again—and, it may be added, generalities not always accurate (as when it is roundly declared, "There are no records of women hermits or misers")—mark Dr. Clouston's paper upon 'Psychological Dangers' and Dr. Richard Lodge's closing address. These two essays suffer in an exaggerated degree from the trick of talking, not about women, but about woman. Women, as observers might perceive if they would but be content to notice facts, instead of enunciating generalities, are just as various as men.

Three Middle English Romances: King Horn, Havelok, and Beves of Hampton. Retold by Laura A. Hibbard. (Nutt.)—We have often remarked on the excellence of this series of mediæval tales, which has the merit of breaking new ground as well as repeating the familiar stories. Up to the present the greater part of the series has been concerned with Anglo-Norman and French tales: this volume presents three stories for which a Northern origin may be claimed with some plausibility, though curiously enough the most lasting popularity of one of them, 'Beves of Hampton,' is in Italy, where it is still a chapbook. The editor has done her duty well, and added a critical note likely to be of use to students. It is a pity, however, that she did not mention among modern versions of 'Havelok the Dane' William Morris's use of it as the foundation for his 'Child Christopher.' Boys, and girls too, will appreciate the stories as they are here told as much as their elders, and the appearance of the book is attractive.

The University Press, Oxford, is a booklet published by Mr. Henry Frowde for visitors at the Turin Exhibition. It might well have a wider currency, for with its illustrations it gives a good idea of the historic interest and achievements of the great Press, which holds what sportsmen call all sorts of "records."

TRINITY COLLEGE, DUBLIN, AND ITS NEW STATUTES.

THE ancient University of Dublin, commonly called (after its single house) Trin. Coll., Dub., has been governed for nearly 300 years by the Statutes of Laud and Stafford, only modified in details, such as salaries, by subsequent "Royal Letters." Its Corporation—the Provost, Fellows, and Scholars—has remained unchanged, thus excluding the Professoriate. The distinction of Senior and Junior Fellows; the absolute government by the Senior Fellows, however old and infirm; the election to Fellowship (a life post) by a single examination: all these things have remained unchanged, and, strange to say, the college has prospered under these obsolete laws, and may still be described as efficient. But to those who know it intimately, there are many growing signs of atrophy. A Governing Body of Provost and Seven Senior Fellows, whose combined ages amount to about 600 years, are surely not likely to keep abreast of the changing conditions of the times. Its members succeed to their posts not by merit, but by seniority. These and a dozen other "survivals" made it highly necessary to adopt some reforms, which, after a long and bitter conflict, have been embodied in the King's Letter (or Letters Patent) issued to the College last week.

Let us put the final clause first, as it is of far the greatest importance. In it the King gives back again to the College the right, assumed by King Charles I., of being the sole author of new Statutes. Henceforth the College can frame such Statutes for itself, subject to the mere approval of the Privy Council. Thus the hands of the reformers, long tied, are loosed. But there are also sundry special changes indicated which need not wait for further internal legislation. In the first place, the present Governing Body of eight is enlarged by the addition of two Junior Fellows and two Professors, who will not only infuse younger life into its discussions, but are also now entitled to be appointed to the important offices hitherto confined to the Senior Fellows. Moreover the election to Fellowship is no longer confined to its present arduous and often unpractical conditions. Professors may be elected Fellows, and other tests than the present enormous examination may be employed. Thus the College may hope to obtain young and brilliant Fellows, instead of the wearied out, and often second-rate, men, who now win the battle by sheer endurance.

There are also large changes in the government of the Divinity School, which will become formally what it had always been really, the training school for the (Episcopal) church of Ireland. The affairs of the school are no longer in the hands of the Governing Board of the College, who might be all laymen, and even indisposed (it was hinted) to attend to the interests of any church, but in the hands of a Council consisting of Fellows, Professors of the school, and even three Bishops—an innovation much criticized, as if three judges were to interfere with the management of the Law School. But the whole Statute bears on its face the features of a compromise, and it was carried through in spite of the bitter opposition of a very small minority. These gentlemen are even still taxing the resources of the law to hinder any expansion of the Corporation of which they are members.

Such, in barest outline, are the provisions of the new King's Letter. Its historical significance is enhanced by the fact that a recent Royal Commission recommended most of its changes, and that many English friends had exerted themselves very actively to protect the College from the destruction of its independence by the proposed Bryce Act. But they did this on the understanding that the College would undertake to reform itself, and not drift into the hands of an Executive Commission, which might have "emptied the child along with the bath-water," as the Germans say.

There is another serious danger ahead, which can only be met by an active and energetic Governing Body, and that is the danger of an Irish Parliament interfering with the liberties of Trinity College. So far as such a Parliament were under clerical influence, it would surely do so, for the independence of Roman Catholics in that College is much disliked by those who control the practice of all the other professional classes among their flocks.

If that danger be averted, there is still the longing for plunder not unknown to professional politicians, and there is some likelihood that the College would suffer financially in the interests of inferior bodies. In any case the majority of the College, in carrying through the present reforms—for the King could only accede to the expressed wishes of the great majority—has done its duty towards its loyal supporters, and towards the interests of liberal education in Ireland.

THE DILKE 'ENDYMION' AND MILTON.

46, Marlborough Hill, N.W., June 12, 1911.

It was not a grateful task that I had to perform when I endeavoured to put the question of the Dilke 'Endymion' on a sound footing; and I thank Mr. Hudson for the considerate manner in which, as Sir Charles Dilke's executor, he has replied. To speak the plain truth, I do not think Sir Charles up to the time when I first knew him had examined very closely the question of the handwriting in which the poems at the end of the 'Endymion' had been copied. I have already admitted Mr. Hudson's point that I did not at that time attribute the writing to Dilke, not having discovered the Navy Pay Office script. Nor do I dispute the position that Keats's friend was "a living catalogue" of his own library and was in a position to know whether the 'Endymion' and the Milton had belonged to Keats. But I do feel confident that Sir Charles had no such knowledge from his grandfather, and was not in those days even aware of what I would call the Dilke Milton.

When I expounded to Sir Charles the scheme of my edition he decided with characteristic promptitude and generosity to put his Keats collection bodily at my disposal, and leave me to decide what I would and what I would not use. In the discussion of the transcripts in the 'Endymion' he assuredly never cited his grandfather as his authority for calling the book Keats's copy; and, in regard to the Milton, only the copy given to his grandmother was forthcoming. His complete frankness in the whole affair makes it inconceivable to me that he would have withheld important knowledge about the two books.

Mr. Hudson is obviously right not to accept me or any other man as an infallible guide on questions of handwriting; and I willingly accept his assurance that the note about Keats's spelling is Sir Charles's, first because Mr. Hudson must in the nature of things know the late baronet's writing better than I or perhaps any other living man, and secondly because the words are much more like Sir Charles's style than his grandfather's.

The spelling, however, is not very important, because the responsibility would rest on the original writer, not on the transcriber; and I cannot recall that in that respect I gave greater textual weight to those transcripts in the Dilke 'Endymion' than to the many copies for which I was beholden to the industry and personal knowledge of Keats's brothers and Richard Woodhouse.

May I take this opportunity to recur to the letter to Taylor about the printing of 'Endymion,' which was in the Huth Collection, and was sold on Tuesday last for the unprecedented price of 520l.? Mr. Tom Hodge was kind enough to arrange for me to make a careful examination of it before the sale; and I found it even fuller of interest than the catalogue with its facsimile of the third page indicated. As long ago as 1848 this admirable letter was, so far as the personally interesting parts of it are concerned, included in the 'Life, Letters, and Literary Remains' (vol. i. pp. 129-30). Lord Houghton dated it April 27th, 1818, and edited it somewhat freely, beside eliminating the portions relative to and including the lists of errata. The true date of the letter is Friday, the 24th of April, 1818; for, though Keats stated only the day of the week, and the "Teignmouth" postmark has no date, there is another postmark dated

"27 Ap." That date was a Monday; and the pencilled "27 April, 1818," evidently added by the recipient, chronicles the day of arrival. Woodhouse records that 'Endymion' was published in April; and it is clear from this holograph letter that Keats had examined the printed book at Teignmouth by the 24th of that month, and had managed to get the astounding blunder about Tellus feeling the load of her own forehead instead of Ocean's set right by the single-line erratum leaf printed as a portion of the earliest copies of the book. As I have now, for the first time, had the opportunity to do the like service for the text of this letter, it seems desirable to print on this occasion a literal transcript of the document. The best textual emendation it affords is the word *cavalier*. I never could imagine what Keats meant by "I find earlier days are gone by"; but "I find cavalier days are gone by," which is what he wrote, makes excellent and characteristic sense. The next best is the word *well* instead of *better* in the expression of his hope to see both Tom Keats and Reynolds cured of their respective maladies. For the rest, it will be an agreeable exercise for those who are addicted to the collation of texts to compare this delightful letter, as now set out, with the previous versions issued and re-issued by Lord Houghton, and followed by myself in four editions and by Sir Sidney Colvin in his collection of Keats's Letters to his family and friends published by Messrs. Macmillan & Co.

In the last-named book appeared, I think, for the first time the few words of postscript "Pray remember me," &c.; Lord Houghton was probably responsible for the "Pray," though he did not print the postscript after transcribing it. Certainly Keats did not write the "Pray." Here is what he wrote, literally:—

Teignmouth Friday

MY DEAR TAYLOR,

I think I did very wrong to leave you to all the trouble of Endymion—but I could not help it then—another time I shall be more bent to all sort of troubles and disagreeables—young Men for some time have an idea that such a thing as happiness is to be had and therefore are extremely impatient under any unpleasant restraining—in time however, of such stuff is the world about them, they know better and instead of striving from Uneasiness greet it as an habitual sensation, a pannier which is to weigh upon them through life.

And in proportion to my disgust at the task is my sense of your kindness & anxiety—the book pleased me much—it is very free from faults; and although there are one or two words I should wish replaced, I see in many places an improvement greatly to the purpose.

I think those speeches which are related—those parts where the speaker repeats a speech—such as Glaucus' repetition of Circe's words, should have inverted commas to every line. In this there is a little confusion. If we divide the speeches into *identical* and *related*: and to the former put merely one inverted comma at the beginning and another at the end; and to the latter inverted commas before every line, the book will be better understood at the first glance. Look at pages 126 and 127 you will find in the 3[rd] line the beginning of a *related* speech marked thus "Ah! art awake—while at the same time in the next page the continuation of the *identical* speech is marked in the same manner "Young Man of Latmos—You will find on the other side all the parts which should have inverted commas to every line.

I was proposing to travel over the north this summer—there is but one thing to prevent me—I know nothing I have read nothing and I mean to follow Solomon's directions of 'get Wisdom—get understanding.' I find cavalier days are gone by—I find that I can have no enjoyment in the World but continual drinking of Knowledge—I find there is no worthy pursuit but the idea of doing some good for the world—some do it with their society—some with their wit—some with their benevolence—some with a sort of power of conferring pleasure and good humour on all they meet and in a thousand ways, all equally dutiful

to the command of Great Nature—there is but one way for me—the road lies through application study and thought. I will pursue it and to that end purpose retiring for some years. I have been hovering for some time between an exquisite sense of the luxurious and a love for Philosophy—were I calculated for the former I should be glad—but as I am not I shall turn my soul to the latter.

My Brother Tom is getting better and I hope I shall see both him and Reynolds well before I retire from the World. I shall see you soon and have some talk about what Books I shall take with me—

Your very sincere friend

JOHN KEATS

Remember me to Hessey—Woodhouse and Percy Street

Errata—

- Page 4 line 4 place the comma after *old*
 Page 60 line 12 for *head* read *bead* ×
 — 66 — 5 place a comma after *dim*
 — 88 — 13 for 'my kindest' read 'delicious'
 — 90 — 10 for 'honour' read 'horror' ×
 — 98 leave out the inverted commas in lines 12 and 14
 — 122 line 12 for 'utmost' read 'tiptop'
 Page 166 line 17 for 'is it' read 'is't'
 — 151 — 3 dele comma
 — 177 there should be a white space after the 5th line
 — 185 line 13 a note of exclam. after *longing* instead of the full stop
 — 205 — 6 dele inverted commas after *ha!* "

There is a great mistake in the 1st line page 195—it should read thus—

"Favour from thee and so I kisses gave
 To the void air &c."

Page 194 line 3 for not[e] of interrog. put not[e] of exclam

I cannot discover any other error—the preface is well without those things you have left out—*adieu*—

Parts that should have inverted commas to every line

- Page 47 from line 12 to line 7 in the next page
 — 126 — 3 — 17
 — 132 — the 4[th] from the bottom to line 5 in page 134

Those ab[b]reviations of *is't* of [*sic* for *for*] is it and *done't* for *done* it are of great consequence more last words

- Page 47 line 10 for *scene* read *serene*
 — 201 — 6 from the bottom for the note of exclam put a note of interrog.—
 — 90 — 3 for *done* it read *done't*

"Parts that should," &c., and "more last words" are on the top and bottom "doublings" respectively; and the address, standing of course on end between them when the letter is laid flat on its face, is

John Taylor Esq^r

Taylor & Hessey's

Booksellers &c

Fleet Street

The two crosses against *bead* and *horror* are in pencil, probably made by Taylor to indicate that those corrections at all events were to be included in the five-line Errata about to be printed, which in fact included also *screen* and *kisses gave* as well as the Tellus correction of the one-line Erratum.

With regard to the correction demanded in line 12 of p. 122, it should be noted that Keats cancelled it by striking the whole line through with his pen.

This abandonment of the correction is curious, though unassailable. The passage is (iii. 352-3):—

But the crown

Of all my life was utmost quietude:

Keats had written *tiptop quietude* in the MS. Taylor had printed *utmost quietude*. No sooner had the startled poet directed the restoration of his own word than it flashed upon him (presumably) that *tiptop* was too current a bit of slang to maintain. So he struck out his erratum; and Taylor's *utmost* remains accepted to this day, with other "improvements greatly to the purpose." There they should remain; and, if we ever find the full version of the second

and final preface, we must not venture to restore to the text passages omitted by Taylor—Keats having approved the omissions. It is curious to note how the indictment so delicately put forward in the first page grew as he went on looking over the printed book. At the end of his third page, on which he had made a pretty good list, he says he "cannot discover any other error"; but the examination still went on; and by the time he had listed the passages which were to have inverted commas before each line and dealt with the *is't* and *done't* question, he had discovered those shown in the bottom "doubling." If we had before us the copy which he had in hand when he sent the result of the scrutiny to Taylor, we should probably find this multitude of small corrections, including the inverted commas, punctiliously noted in it.

H. BUXTON FORMAN.

OLD SYRIAC GOSPELS.

Cambridge.

YOUR very kind review of my edition of the 'Old Syriac Gospels' in your issue of September 3rd, 1910, prompts me to make an important communication to you concerning it.

The wish has sometimes been expressed that an expert scholar might visit Mt. Sinai and settle the differences between Dr. Burkitt and myself. These amount to about 300 in number; and a list of them will be found in my Appendix I.

Dr. Arthur Hjelt, Professor of Hebrew in the University of Helsingfors, and author of 'Die altsyrische Evangelienübersetzung und Tatians Diatessaron,' has now returned from a visit to the Monastery, where he has made an examination of the points of difference between us. I summarize the result.

He finds that in 133 verses my reading is correct, and in 21 others possible. In 7 others Dr. Burkitt is correct, as against me, and in 11 others his reading is possible.

I do not, however, accept all these corrections to my own work. There are seven of them which I at first read as Dr. Burkitt and Dr. Hjelt have done. But a slight touch with the re-agent revealed to me an additional final letter, or syllable, which, in some instances, put the word in the plural, but has now faded away.

Forty of my words, which Dr. Hjelt endorses, were in the *editio princeps*, published in 1894 by the Cambridge University Press. They have therefore four witnesses in their favour: the original transcriber, myself, Mrs. Gibson (to whom I showed every doubtful word, both in 1902 and 1906), and Dr. Hjelt.

The 300 disputed words are, of course, only a small fraction of the whole text. But every syllable of an ancient version of the Gospels deserves to be weighed; and not a few of these words give us interesting readings. In John xi. 18, we learn that Bethany was then, as now, two miles (not parasangs), from Jerusalem; in John i. 41, that Andrew found his brother Simon and brought him to Jesus at the dawn of day; and from John vi. 19, that the disciples turned pale when they saw our Lord walking on the sea. These things and 130 others are no longer doubtful. Unfortunately Dr. Hjelt was not allowed to use the re-agent, so he could verify only about the half of my Appendix. It must be remembered that Dr. Burkitt has worked under the great disadvantage of having no

opportunity of reading quite one half of the manuscript. For reasons which I have explained in my book, the forty days which he spent at Sinai in 1893 were all too short for the decipherment of his own allotted portion; and those done by Dr. Rendel Harris at that time, and by myself in 1895, he cannot have seen, excepting chap. xvi. 1-8 of St. Mark's Gospel.

Messrs. Williams & Norgate are preparing a leaflet which will give a more detailed account of Dr. Hjelt's report. It will fit into the pocket which they have already placed in the binding at the end of my book; and may be had on application by post. I shall place the report in the hands of the Librarian of Westminster College, Cambridge, who will be pleased to show it to any one desiring further information.

AGNES SMITH LEWIS.

COMMERCE v. LITERATURE: A DISCLAIMER.

12, 13, and 14, Norris Street, Haymarket, June 13, 1911.

YOUR issue of the 3rd. inst. contains a letter from Miss Annesley Kenealy respecting her novel 'Thus Saith Mrs. Grundy,' published a fortnight ago by us.

In the second paragraph of that letter she puts forth as our statement a misleading one, and one that we never made, viz., "that the Libraries Association now requires all publishers to submit author's proofs of all forthcoming fiction to this Association."

The third paragraph, again, gives an entirely wrong impression. None of the circulating libraries, either individually or through their Association, has either blue-pencilled certain passages or suggested the rewriting of the book.

JOHN LONG, LIMITED.

HUTH AUTOGRAPHS.

ON Monday and Tuesday last Messrs. Sotheby sold the fine collection of autograph letters which formed part of the famous Huth Library. All letters and manuscripts are wholly in the handwriting of the person to whom they are attributed, except where in the following description the word "signed" is used, when the signature only is autograph. Among the chief prices were:—

Anne Boleyn, signed document addressed to Thomas Cromwell, March 8, [1534], 315*l*. Anne of Cleves, signed document, 1552, 101*l*. J. S. Bach, 4 pages of music, 41*l*. Sir Francis Bacon, signed letter to the Chancellor of the Exchequer, June 13, 1619, 41*l*. Beethoven, three-page letter, Nov. 1, 1808, to Count Oppersdorf, 40*l*; score of the song 'An die Hoffnung,' 205*l*. Burns, manuscript of 88 lines of 'The Jolly Beggars,' 490*l*. Byron, three-page letter to John Hunt, April 24, 1823, 35*l*. 10*s*. Calvin, Declaration of Faith, May 15, 1560, 62*l*. Las Casas, three-page letter to the President and Council, Oct. 22, 1545, 200*l*; signed letter, 10½ pages, 67*l*. Charles I., half page letter to Sir Edward Nicholas, July 27, 1647, 66*l*. Kitty Clive, three-page letter to David Garrick, Jan. 23, 1776, 55*l*. Defoe, one-page letter, Oct. 11, 1704, 295*l*. Diane de Poitiers, her household accounts, August, 1565, signed, 136*l*. Sir Francis Drake, signed letter to the Earl of Essex, Feb. 16, 1587, 100*l*. Dryden, one-page letter to Mrs. Stewart, Candlemass-Day, 1698, 200*l*. Edward IV. and Edmund, Duke of Rutland, signed letter in Latin to the Duke of Milan, Dec. 10, 1460, 130*l*. Queen Elizabeth, three-page letter in French to Henri IV., 365*l*. Leonora d'Este, signed letter to Alfonso, Duke of Ferrara, March 23, 1574, 39*l*. Gabrielle d'Estrées, deed of sale, 1599, signed four times, 32*l*. John Evelyn, letter of 1½ pages to Mr. Cooper, June 21, 1702, 34*l*. Fielding, the receipt for 600*l*. for the copyright of 'Tom Jones,' June 11, 1748, and the official ratification of this agreement, signed, March 25, 1749, 1,015*l*;

three-page letter to Mr. Nourse, July 9, 1739, 32*l*. Francis II., half-page letter to the King of Navarre, 195*l*. Frederick the Great, autograph verses addressed to Algarotti, July 20, 1740, 48*l*. Galileo, letter of 1½ pages, Feb. 21, 1635, 116*l*. Garrick, two-page letter to Mrs. Abington, 38*l*. Goethe, four-page letter to Prof. Oeser, Feb. 14, 1769, 82*l*. Goldsmith, letter of 2½ pages to Sir Joshua Reynolds, July 29 [1770], from Paris, 280*l*. Gray, one-page letter, Oct. 25, 1760, describing the death of George II., 33*l*. Nell Gwyn, signed receipt, 72*l*. John Hampden, signature to an assessment of taxation, Sept. 10, 1628, 31*l*. Henry VII., signed letter to Louis XII., August 12, 1506, 35*l*; another, Oct. 11, 30*l*. Henry, Prince of Wales, one-page letter to the Dauphin (afterwards Louis XIII.), Oct. 25, 1605, 41*l*. Hogarth, two-page letter to J. F. Reiffstein, April 18, 1757, 45*l*. Katharine of Arragon, three-page letter in Spanish to the Emperor Charles V., Feb. 8, 1534, 800*l*. Katharine Parr, signed letter to her brother the Lord Warden of the Marches, July 20, 1543, 175*l*. Keats, letter of 3½ pages to his publisher John Taylor, about the proof-sheets of 'Endymion,' April, 1818, 450*l*. Charles Lamb, manuscript of his essay 'Grace before Meat,' 455*l*; verses, eight lines, 30*l*. Robert Dudley, Earl of Leicester, two-page letter to John Ottomans, Nov. 2, 1584, 41*l*. Luther, letter of 1½ pages to John, Duke of Saxony, written "on the Thursday after St. Margaret, 1525," 495*l*. Machiavelli, three-page letter to the commissary Tebaldi, June 1, 1503, 35*l*. Queen Mary I., one-page letter in French to Charles V., Aug. 14, 1557, 420*l*; sign manual, 45*l*. Mary, Queen of Scots, one-page letter in French to Chasteauneuf, Jan. 31, 1586, 1,025*l*. Queen Mary II., one-page letter to Madame Overquerque, Feb. 25, 30*l*. 10*s*. Murillo, signed sketch, 53*l*. Cardinal Pole, three-page letter in Italian to Cardinal Morone, Jan. 14, 1555, 40*l*. Sir Walter Raleigh, one-page letter to Sir Walter Cope, Oct. 5, written from the Tower, 520*l*; another, ½ page, to Sir John Gilbert, July 14, 1597, 81*l*. Rubens, three-page letter in Italian, April 22, 1629, 56*l*. Schiller, four-page letter to Goethe, Aug. 31, 1794, 175*l*. Shelley, three-page letter to Joseph Severn about 'Adonais,' Nov. 29, 1821, 770*l*; another, to T. L. Peacock, Aug. 16, 1818, 85*l*. Sir Philip Sidney, one-page letter to Lord Burghley, Feb. 8, 1576, 69*l*. Henry Wriothesley, Earl of Southampton, one-page letter to Lord Spencer, 88*l*. Swift, letter of 3½ pages to John Temple, June 15, 1706, 51*l*. Tasso, one-page letter to Curtio Arditio, Dec. 13, 1582, 32*l*. Uhland, MS. of 'Der Rosengarten von Worms,' 35*l*. Paul Veronese, one-page letter, March 28, 1578, to Marcantonio Gaudini, 38*l*. Edmund Waller, one-page letter to John Evelyn, May 5, 1648, 94*l*. Washington, letter of 3½ pages to Sir Edward Newenham, Feb. 24, 1788, 71*l*. General Wolfe, one-page letter to Col. Warde, Dec. 20, 1758, 32*l*. Cardinal Wolsey, signed letter to Pope Leo X., June 3, 1516, 55*l*.

The total of the sale was 13,091*l*. 4*s*. 6*d*.

Juvenile Literature.

Stanger (Mrs. Henry Yorke), Fairy Stories, 3/6

With illustrations by Phyllis Peters.

Fiction.

Blundell (Madge), Katherine of the Barge, 1/6 net. An Italian story.

Collins (Colin), Four Millions a Year, 6/

"What would you do with the sum of four millions a year?" is the question the author sets out to answer.

Coloma (Luis), A True Hidalgo, 5/

The hero is a modern Spanish hidalgo, known to his intimates as "Boy," an English nickname which gave the title to the Spanish original which has been translated by Harold Binns.

Dickens Centenary Edition: Little Dorrit, 2 vols.; Reprinted Pieces, &c., 3/6 each volume.

Drury (Major W. P.), Long Bow and Broad Arrow, 3/6

Short stories with one poem.

Gerard (Louise), A Tropical Tangle, 6/

A story of West Africa.

Gillman (Gurner), The Ninth Duchess, 6/

As in 'Her Suburban Highness,' the author takes us to Garstein.

Halidom (M. Y.), The Poet's Curse, 6/

The curse is that promised to the mover of Shakespeare's bones, and the book shows how it worked on a San Francisco millionaire.

Heard (W. Nevill), Things of Time, 6/

The story of a man of means whom science and philosophy lead to doubts concerning religion. A broken engagement and the death of a friend lead him to go abroad, and he is lost at sea. The book is overcrowded with serious discussions.

Hunt (A. Knight), Until the Day Breaks, 6/

Written to show the value of the lessons of sorrow and hope.

Leighton (Marie Connor), Builders of Ships, 6/

A sensational story of love and mystery.

Luther (Mark Lee), The Sovereign Power, 6/

A story of aviation by an American writer, with 8 illustrations by Chase Emerson.

Naybard (Hugh), The Battle of Souls.

A story dealing with the strife between good and evil, and introducing the figure of Christ.

Mastering Flame, 6/

The anonymous author uses an exotic Eastern atmosphere and exuberance of adjective to emphasize the process of soul-awakening in the descendant of a long line of hot-headed Castilians, whose husband removes her from obscurity to luxurious surroundings.

Thorne (Guy), Divorce, 1/ net.

Begins with the education of a clergyman in the ways of the world.

Thurston (E. Temple), Mirage, 1/ net.

New edition.

White (Stewart Edward), Rules of the Game, 2/ net.

Another of the author's studies of life in the Far West.

Williamson (C. N. and A. M.), The Lightning Conductor: the Strange Adventures of a Motor-Car, 7d. net.

New edition.

General Literature.

Apear (Diana Agabeg), In His Name.

Comes from Yokohama, and states that the stories in the book are true to life, and present an unvarnished tale of Turkish atrocities perpetrated in 1909.

Fletcher (Jefferson Butler), The Religion of Beauty in Women, and other Essays on Platonic Love in Poetry and Society, 5/6 net.

Home University Library: Evolution, by Patrick Geddes and J. Arthur Thomson; Health and Disease, by W. Leslie Mackenzie; An Introduction to Mathematics, by A. N. Whitehead; Mohammedanism, by D. S. Margoliouth; and The Opening-Up of Africa, by Sir H. H. Johnston, 1/ net each.

Naval Pocket-Book, 1911, 7/6 net.

Nottingham, Annual Report of the Public Libraries and Natural History Museum Committee, 1910-11.

Pilley (J. J.), The Progress Book: an Illustrated Register of the Development of a Child from Birth to Coming of Age.

Intended to serve as a simple guide for registering the more interesting facts relating to the early infancy of a child, and later as a record of physical and mental growth.

Proportional Representation Society, Report for the Year 1910-11.

Royal Society of Literature, Academic Committee: Inaugural Address by the Viscount Haldane of Cloan, and Eulogy on Samuel Henry Butcher, by Prof. Gilbert Murray, 1/ net.

Soyer's Paper-Bag Cookery, by Nicolas Soyer, 1/ net.

The object of the book is to explain the new system of cooking by means of paper bags.

Steiner (Rudolf), *The Submerged Continents of Atlantis and Lemuria, their History and Civilization, being Chapters from the Akâshic Records*, 3/6 net.

Translated from the German.

Whytehead (Mrs. H. R.), *Mary: a Little Book for the Maries of England*, 1d.

Pamphlets.

Beney (F. W.), *The Compulsory Working of Letters Patent in its Imperial and Economic Aspects*, 3d.

King (Rev. James), *The Edwardian Walls and Elizabethan Ramparts of Berwick-on-Tweed*. An address given to the Northumberland County Association of the National Union of Teachers.

Rouse (W. H. D.), *The New Renaissance: an Answer to Sir E. Ray Lankester (Nineteenth Century, March)*, 3d.

FOREIGN.

Fine Art.

Rodin (A.), *L'Art*, 6fr.

Includes a number of unpublished designs by the author. The eleven chapters begin with 'Le Réalisme dans l'Art,' and end with 'L'Utilité des Grands Maîtres.'

Philosophy.

Busch[†] (K. A.), *William James als Religions-Philosoph*, 2m.

Political Economy.

Behrens (O.), *Die Bedeutung der Betriebs-Krankenkassen in der deutschen Krankenversicherung*, 3m.

Sorel (A. É.), *L'Écueil*, 3fr. 50.

The story of a young girl who has lost her fortune and has to earn her living.

General Literature.

Bazin (R.), *La Douce France*, 3fr. 50.

Written to interest French boys and girls in the story of their country, and illustrated by J. M. Breton.

Puau (R.), *Silhouettes Anglaises*.

Begins with Florence Nightingale and the Baroness Burdett-Coutts, and closes with the Whitechapel Art Gallery.

Thomas (Allen Burdett), *Moore en France: Contribution à l'Histoire de la Fortune des Œuvres de Thomas Moore dans la Littérature française, 1819-30*, 3fr. 50.

The author is a Doctor of the University of Lyons.

—and to each of them Lady Ritchie contributes an explanatory preface. In addition, the papers are illustrated by the author's drawings, hitherto unpublished, and facsimiles of his letters.

MRS. WARRE CORNISH writes on 'Thackeray and his Father's Family,' and includes some new letters concerning Thackeray's early life; while in 'Sylhet' Thackeray Mr. F. B. Bradley-Birt traces the career of the novelist's grandfather in the service of the East India Company. The answers to Sir Arthur Quiller-Couch's paper on Stevenson are given, and a new set of questions on Thackeray by Sir Algernon West.

AMONGST the articles in *Chambers's Journal* for July are 'The King and Queen at Home,' by Miss Mary Spencer Warren; 'Sir Walter Scott's First Country Cottage' by Mr. James Steuart; 'Some Scottish Songstresses,' by Prof. Hugh Walker; 'The Boy in War,' by Col. Hugh Pearse; and 'Migratory Birds in New Zealand,' by Mr. R. W. Reid.

AT the end of this month the Clarendon Press will publish the New Testament portion of the famous Codex Sinaiticus, reproduced in facsimile from photographs by Prof. and Mrs. Kirsopp Lake. The Professor is contributing an Introduction giving the date and history of the Codex, and a palæographical account in which an attempt is made to distinguish the scribes who worked on the MS.

THE Annual Report of the London Library was presented by the Committee last Wednesday. Mr. Frederic Harrison was in the chair, and read an interesting paper on some past eminent members of the Committee. Donations of books and the number of members both show an increase; and there has been a satisfactory sale of the Author and Subject Catalogues, which are, indeed, admirable for reference.

WE regret to record the death on Saturday last of Dr. Æneas Mackay, ex-Sheriff of Fife and Kinross. Dr. Mackay, who was in his 72nd year, devoted most of his leisure to literature, and was Professor of History in the University of Edinburgh from 1874 to 1881. He regarded his two volumes entitled 'Practice of the Court of Session' (1877-9) as his *magnum opus*; but mention should be made of his memoir of Lord Stair (1873), his edition of Pitscottie's 'Chronicle' for the Scottish Text Society (1899), and his admirable little volume on the counties of Fife and Kinross. Dr. Mackay was also a contributor to the 'Dictionary of National Biography' and to the 'Encyclopædia Britannica.' It has been truly said of him that, in an age of specialization, he did much to maintain the traditional alliance between law and letters.

It is proposed to issue an Index to the Cole MSS. in the British Museum, made by Mr. J. E. Foster and Mr. G. J. Gray, and an appeal is made to cover the cost of the work, subscriptions for which (15s. net) should be sent to Messrs. Bowes & Bowes, 1, Trinity Street, Cambridge. The MSS.

refer largely to Cambridge, but also to other parts of the country, and an index to them, as they are extensive, will be of great value to students of research and antiquaries.

THE death of the Rev. Dr. K. A. Mackenzie of Kingussie removes a figure well known in Scotch education. It was largely due to Dr. Mackenzie that the Highland Minute of the Education Act was drawn up, by which pupils in the Highlands could earn about six shillings per head in grants more than pupils in the south and east of Scotland. He was frequently consulted by those in authority on educational matters, and some of the changes effected in the last Scottish Education Act in its passage through Committee were due to his initiative.

THE REV. S. BARING-GOULD writes from Lew Trenchard:—

"Will you allow me through you to apologize to Sir C. Kinloch Cooke for using some of the information relative to Princess Mary of Teck from his book, in my 'Land of Teck,' without first obtaining his permission, though I did refer to his book in a foot note as my authority? No lack of courtesy was purposed, and the omission was not due to oversight, but to an accident."

'THE STORY GIRL' is the title of the new novel by Miss L. M. Montgomery, which Sir Isaac Pitman & Sons will publish shortly. Like its predecessors, this autobiographic study of imaginative girlhood has Prince Edward Island for background.

THE Académie Française has not this year awarded the Grand Prix de Littérature of 10,000fr., although M. Charles Péguy was at the head in each of the four ballots. M. Péguy has, however, received the quinquennial Prix Estrade-Delcros of 8,000fr. for his 'Mystère de la Charité de Jeanne d'Arc.' The Prix Alfred Née of 3,500fr., for the most original work, has been awarded to M. Louis Bertrand. Col. Barattier receives the Prix Vilet of 2,500fr. for his books on Africa; and M. Paul Renaudin the Prix Narcisse Michaut of 2,000fr. for his book 'Ce qui Demeure.'

THE Académie des Inscriptions has this year divided the Grand Prix d'Histoire Gobert into two, the first prize of 9,000fr. going to M. Ch. de la Roncière for his 'Histoire de la Marine Française,' and the second of 1,000fr. to M. Lizerand for his 'Clément V. et Philippe le Bel.'

THE yearly meeting of the Gutenberg-Gesellschaft will take place in Mayence on the 25th inst., and will include an address by Herr Hans Koegler on 'Die Buchillustrationen in den ersten Jahrzehnten des deutschen Buchdrucks.'

AMONG Parliamentary Papers just published we note: Education, Ireland, Commissioners' Report for 1910 (post free 6½d.); and Brasenose College, Oxford, Statute, 1911 (post free 1½d.).

NEXT week in consequence of the Coronation the *Athenæum* will be published on Wednesday.

Literary Gossip.

CELEBRATING the centenary of Thackeray's birth, *The Cornhill Magazine* for July opens with an anniversary poem by Mr. Austin Dobson, with which is given a new portrait of Thackeray. Two hitherto unpublished Thackeray MSS. are included in the number—'Cockney Travels' and 'The Knights of Borsellen'

SCIENCE

The Voyage of the Why Not? in the Antarctic: the Journal of the Second French South Polar Expedition, 1908-10. By Dr. Jean Charcot. English Version by Philip Walsh. Illustrated. (Hodder & Stoughton.)

IN our opinion the translator of this book has erred in anglicizing the two elementary words composing the ship's name—all the more since he has done this only in the title; in the text her French name is retained. Names, whatever their origin, are the property of the language in which they were first given. Dr. Charcot does not explain how the ship came by her curious name; we may suppose it due, as Sir. E. Shackleton has suggested, to "a dash of humour and a flash of hope."

The expedition whose fortunes are recorded in this splendid volume was originated under Government auspices, for the Chamber voted 28,000*l.* towards its cost. Dr. Charcot had established a claim to this national recognition by his previous expedition with the *Français* in 1903-5, which had to be undertaken with insufficient pecuniary resources. That ship was altogether too small for exploring so dangerous a region; and the wonder is that she was kept afloat two months after grounding on a reef in a high southern latitude. Good work was done, however, in spite of disadvantages; and when the commander began to plan another expedition to complete his work on the coast of Western Antarctica, he was able to raise a fund of nearly double the amount given for his first venture. The large sum of 16,000*l.* spent on the *Pourquoi Pas?* which was specially constructed for navigating the Antarctic pack, proved a wise expenditure. Like the *Français*, she struck on a submerged rock and sustained serious injury to her hull; but, although the risk of continuing her voyage was considerable, it was cheerfully faced, and she remained thirteen months longer in the Antarctic.

No part of the South Polar area is more interesting than that chosen by Dr. Charcot. A glance at the maps in Fricker's 'Antarctic Regions' (published in 1895) will show how enormously our knowledge of that quarter has grown in the last sixteen years. Before that date isolated patches of land, as Alexander I. Land, Peter I. and Adelaide Islands, and the Biscoe group, had been seen, mostly from a great distance; but their position with respect to lands much further north was entirely uncertain; and it was not really known whether what was vaguely termed "Graham Land" was a continuous tract or an archipelago of mountainous islands. The Belgian and Swedish expeditions between 1897 and 1903, and the two voyages of Dr. Charcot, have shed a flood of light on this region. We now

know that a narrow peninsula—widening considerably towards the south, and not pierced by any strait—extends southwards from near the sixty-third parallel for five and a half degrees of latitude, and perhaps further still; and the presumption is strengthened that it is part of an Antarctic continent. As the curtain has gradually lifted, the coasts of this "mainland," as it may fairly be called, have received various names from successive explorers.

On his first voyage Dr. Charcot discovered in 1905 a stretch of coast which he named Loubet Land, supposing it to be part of the mainland. His second voyage has convinced him that this is the land seen by Biscoe in 1832, and named by him Adelaide Island; but he found it to be ten times the length of seven miles given to it by Biscoe, and to be separated from the mainland only by a narrow channel. He has transferred the name Loubet Land to the mainland behind it, south of the Graham Land of Biscoe; and the coast for a hundred miles south of the island, which had never previously been seen, he has named Fallières Land. The mountainous tract seen forty miles off by the Russians in 1821, and named Alexander I. Land, had been sighted only four times in the interval, and always from a great distance. But in January, 1909, Dr. Charcot pushed his way through the flocs to within two miles of its fringe of ice-cliff; and a year later, approaching it from the north-westward in clear weather, he discovered new land to the west and south of it, which appeared to bend eastward towards Fallières Land. This is to be named Charcot Land—not after the explorer, but after his father, the scientific professor. Thus Dr. Charcot's first opinion that Alexander Land is an island was considerably shaken; though its northern coast is not continuous with that of Fallières Land, it may be separated from it by a deep gulf, and not by a strait.

Regardless of the injured condition of his ship, Dr. Charcot sailed westward from this point along the edge of the pack, and sighted Bellingshausen's Peter I. Island—the first land discovered south of the Antarctic circle—which had not been seen since its discovery in 1821. On this westward cruise he saw many indications of land to the south, and thought that he was only prevented from actually seeing it by continual mist and fog. A little further west he missed an opportunity, which many geographers will regret. On January 18th, 1910, he was in the longitude (106° 54' W.), and only forty miles north, of Cook's "Furthest South" (71° 10')—long called his "ne plus ultra"—in 1774. From Cook's description of what he saw at this point it has been generally supposed that he had before him the ice-clad fringe of the continent, but failed to recognize it as such. Dr. Charcot, apparently unaware of this high probability, merely says:—

"It would have been easy for us, pushing straight forward into the ice, to make some 60 miles, which would have allowed us to

say that we had beaten Cook's latitude; but this small satisfaction would have cost us a lot of time and still more coal."

Four days later, in about 124° W. long., the pack forced him to the north; and he therefore made for Punta Arenas in Magellan Straits, where he arrived in his sorely battered ship on February 11th, 1910.

Dr. Charcot possesses descriptive powers of a high order; and the interest of his narrative leads one to hope that the record of his first voyage, '*Le Français au Pôle Sud*,' may yet appear in an English dress. The present volume, like the former, consists mainly of extracts from his journal; and we are thus allowed an insight into the daily hopes and fears and anxieties which beset the commander of an Antarctic expedition. In January, 1909, he was naturally eager to find a safe winter harbour in the neighbourhood of his new discoveries. But the ironbound coast, infested with icebergs and sinking into great depths close to the shore, rendered his search abortive. Between the mainland and the southernmost point of Adelaide Island, which he named Cape Alexandra in compliment to the Queen-Mother, he moored his ship to the ice in a bay for several days; but the overturning of a large iceberg, which was split into a thousand fragments within 300 yards, convinced him of the danger of his position. A week earlier he had written:—

"Icebergs and ice-blocks are decidedly the curse of the region which we have chosen for our expedition. Great or small, they constitute a perpetual danger for the ship, which is never safe from them, whether she be under steam, at rest, or moored alongside a floe or in a cove. Almost always on the move, changing their course with surprising rapidity, according to the winds and currents, at times heading opposite ways, they give no opportunity for repose, even in the calmest of weather, and it needs the gift of philosophy and the indifference acquired by habit to anchor anywhere. Without risk of exaggeration, I may say that if we had been able to count those which we saw, even during the summer campaign, the figure would easily have mounted to over 10,000. Apart from the danger arising from their bulk, occasionally they break up, setting up great swelling waves which may bring danger too, and scattering over the ice-pack their fragments of blue ice as hard as rocks, against which the ship runs the risk of serious injury."

Eventually he found a cove in Petermann Island, at the southern end of Lemaire Channel, where he established himself for the winter of 1909. It was much further north than he wished, and only a few miles from his winter quarters of 1904; but even here he had to construct for his security an elaborate boom of chains and hawsers to prevent the intrusion of ice-blocks, so dangerous to the ship in a storm. But the spot had the advantage of being close to the mainland, the crossing of which to the eastern side was part of the programme. Unfortunately, the commander and one of his staff were afflicted during a relatively mild winter with a mysterious heart complaint, the symptoms of which bore close resemblance to scurvy. Several

attempts were made to scale the glaciated range of the mainland, but without success. On the last occasion, after being confined to their tents by a four days' snowstorm, the party reached the height of 3,500 feet, but then found themselves in an enormous cul-de-sac, which they called the Amphitheatre of the Avalanches, surrounded by inaccessible mountains. Dr. Charcot, like Capt. Scott, had some motor-sledges, but he does not speak favourably of them.

The lover of adventures, recounted modestly and without exaggeration, will find much to his taste in this charming volume. Dr. Charcot gives a vivid description of the Norwegian and Argentine whaling-fleets, which he twice visited in their head-quarters at Deception Island. On the second occasion he had his damaged ship examined by a diver, and was privately warned against returning to the south for another season's exploration—a warning which he kept to himself and totally disregarded. He is mistaken in calling the most easterly of the South Shetland group "King George I. Land"; on a later page it appears, with equal incorrectness, as "St. George Island." It was discovered in 1819 by William Smith (not "Williams," which was the name of his ship), and doubtless named after George III. The mistake has probably arisen from the "I." standing in some maps for "island." Generally, however, Dr. Charcot is well versed in the explorations of his predecessors, and shows a scrupulousness which is not too common in retaining the names given by the first discoverers.

The illustrations in the book, especially the panorama of winter quarters, are admirable; but it is disappointing to find no view of Alexander I. Land, since we are expressly told that, on the nearest approach to it, "all the cameras on board" were at work incessantly. The most conspicuous blot on the English version is the absence of a large-scale map of the discoveries; the small South Polar chart, which alone is supplied, does serious injustice to the results obtained. The translator has done his work in very capable fashion.

OUR LIBRARY TABLE.

The Progress of Physics during 33 Years. By Arthur Schuster. (Cambridge University Press.)—These lectures, delivered before the University of Calcutta three years ago, form excellent reading. In them the leading discoveries in physics, which is not now to be separated from mechanics and chemistry, are summarized in masterly fashion, and the lecturer gives more than one hint that is suggestive. On his own particular subject of magnetic storms, Dr. Schuster is still of opinion that the sun cannot be held directly responsible for their appearance, although he thinks that the centre of our system may indirectly bring them about, "either by direct radiation or by injection of particles which ionize the air through impact." These alternatives

are examined, with perhaps some leaning towards the latter, and Dr. Schuster then turns to consider the reason why the earth behaves like a magnet. The explanation that it is due to the masses of iron it contains he rejects, because iron loses its magnetism at the temperature and pressure that must exist in the centre of the earth; but he suggests that every rotating body may behave as a magnet, and experiments made even since he wrote lend much colour to this view. On the question of the cause of the earth's negative electric charge, he states his opinion, with some reserve, that it is atmospheric and not cosmical, and that the charge is not dissipated into space.

We wish we had room to dwell upon what is said with regard to scientific education, and why it is that the greatest and most far-reaching discoveries have seldom been the result of systematic laboratory work. On this point we should probably find ourselves in less close agreement with Dr. Schuster than in the rest of his admirably written book. The lectures have been well prepared for the press, although why the discoverers of radium should be called "Mr. and Mrs. Curie" we fail to see. The misplacing of a comma in the definition of action at a distance, at the beginning of Lecture II., makes the author say the reverse of what he intended.

The Silva of California. By Willis Linn Jepson. (Fisher Unwin.)—This volume, which is the second volume in the "Memoirs of the University of California," contains 283 pages of text, 85 full-page plates in black and white, and 3 large maps. Prof. Jepson has made an attempt to deal with the native trees of California in a manner befitting the importance of this region from the point of view of the arboriculturist. It has only to be remembered that California is the natural home of the Big tree (*Sequoia gigantea*) and the Redwood (*S. sempervirens*) to realize that the study of the Californian silva is as difficult as it is interesting. How hard it is to obtain trustworthy data respecting the age of such trees is shown by the many ill-considered statements made from time to time on the subject. Prof. Jepson gives us the best information it is possible to obtain, and he estimates the age of mature trees of *Sequoia gigantea* as from 500 to 2,300 years, but he explains that the data are still insufficient to warrant him in attempting to state the extreme age the species is capable of attaining. In comparison with these figures may be taken those relating to the allied species *S. sempervirens* (Redwood), mature trees of which are estimated to be from 300 to 1,500 years old. The Redwood timber, after but slight appreciation for many years, is now used extensively for posts, farm-buildings, finishing of houses, water tanks, wine-vats, telephone poles, railroad ties, roofing for freight cars, blocks for street-paving, and other purposes. But the Sequoias, though they claim the chief interest, are only some of the features of the Californian silva, which includes many fine pines and examples of Cupressus amongst the Gymnosperms, and a vast number of Dicotyledons amongst the Angiosperms.

Prof. Jepson's book can be unreservedly recommended to those who wish for authoritative information, and the plates will help the inexperienced to understand the principal characteristics of the different species.

RESEARCH NOTES.

In the *Compte Rendu* of the Académie des Sciences for last month is a communication from M. E. Henriot on the radio-activity of rubidium, which has already been the subject of experiment by, among others, Mr. Norman Campbell. Rubidium—which, it may be well to mention, is a metal of the alkaline group occupying a position midway between copper and silver—has, M. Henriot finds, a radio-activity which is to that of potassium as three to two. It possesses the peculiarity that its radiations, although more intense, have much less penetration than those of its neighbours in the group, which makes observation very difficult. Most of M. Henriot's experiments were made with the sulphate, which, like the sulphate of potassium, offers some advantage over the other salts in ease of working; but in order to be certain that the radio-activity was a property of the metal itself, he controlled these experiments by others with the chloride, iodide, nitrate, and the double salt of rubidium and aluminium. In each case he found the amount of radiation vary with the content of the metal, and he has therefore no doubt that the phenomenon is an atomic one, and is brought about, as in the case of the more highly radio-active bodies, by the disintegration of the atom. The number of substances thus exhibiting radio-activity is therefore gradually increasing, and, although we are still very far from proof that it is the property of all matter, there is more to be said in favour of this view than formerly.

In this connexion may be taken the ingenious paper by Prof. Harold Wilson (now of McGill University) which appears in *The Philosophical Magazine* for this month. Starting from Sir Joseph Thomson's assumption that atoms may be regarded as spheres of positive electricity containing negative electrons moving freely within them, he sets out to show how the number of electrons within the atom of any given substance ought to be deducible from its atomic weight. To get at this, he assumes the truth of Sir Joseph Thomson's theory that each element in a "series"—it is evident from the context that he means a group—of similar elements is derived from the one above it by the addition of a spherical layer of electrons together with the amount of positive electricity required to keep the atom neutral. He then shows that the tubes of force in such a system tend to become as short as possible, while their volumes remain constant. The effect of this, he says, will be to make the field round each electron as nearly spherical as possible, and to place the electron itself in the centre of the sphere. Arguing on this basis, he shows by mathematical reasoning that it is sufficient to find some means of dividing the sphere into a number of equal volumes, each as nearly spherical as possible and containing an electron at its centre, in order to determine their method of distribution, and that, when the number of electrons is large, they must be arranged like the centres of the shot in a pile of shot. In the example that he gives of thirteen electrons, he says we should expect to have one in the middle and the twelve others arranged round it at equal distances.

This, in its turn, suggests that the electrons arrange themselves within the atom on nearly spherical surfaces concentric with the surface of the sphere of positive electricity, or, in other words, like the successive skins of an onion. The fields of the electrons on the surface of the sphere will then form a layer, the cube of the thickness of which will

be approximately equal to the volume of the field of one electron. The calculations that he has made show that the number of the electrons in each atom actually comes out at about eight times the atomic weight in all cases, and this corresponds with estimates lately made on the scattering of radiation by different elements.

M. Pierre Weiss's discovery of the "magneton," which has been more than once alluded to in these Notes, is well explained by an anonymous writer in the current number of the *Revue Générale des Sciences*. Having collated all the magnetic moments that have hitherto been precisely measured, the Swiss scholar found that there seemed to be some sort of relation between them. Different specimens of iron, for instance, gave different values for the magnetic moment of each; but all these appeared to be multiples of one aliquot part. The examination of different specimens of nickel gave a similar result; and M. Weiss was not long in perceiving that these aliquot parts in the case of the most widely differing atoms were identical. The greatest common divisor of these magnetic moments was therefore evidently of extreme importance, and it is this which M. Weiss has named the *magneton*. He thinks he can show that the magneton exists in iron, nickel, cobalt, manganese, copper, mercury, uranium, and the metals of the rare earths; and the writer from which the above is quoted suggests that it may be a common constituent of all elementary substances. From this he makes the further suggestion that it may possibly be the explanation of chemical affinity, Wiedemann and Pascal having already noticed the correlation of magnetic phenomena and chemical properties. He would, in fact, liken the magnetons to valencies; and, although this does not seem to rest for the present on anything but conjecture, it may be as well to keep the analogy in view.

The Hon. Robert Strutt's *Bakerian Lecture on 'Chemically Active Nitrogen' is now in print, and appears in the current number of the Royal Society's *Proceedings*. Carrying further his experiments on the after-glow sometimes appearing in vacuum tubes recently subjected to an electric discharge—experiments which were noticed at the time in these Notes—Prof. Strutt discovered that nitrogen thus treated with the discharge of a jar with a spark-gap in circuit underwent a modification resembling that which converts oxygen into ozone. He further noticed that in this condition, from being one of the most chemically inert of gases, it displays great aptitude for combination. Thus he discovered that it acts freely upon ordinary phosphorus, turning it into red phosphorus, and also forming with it a nitride hitherto unknown. With silver and mercury it also combines, forming with the latter an explosive compound, and it attacks nitric oxide, part of which it converts, oddly enough, into the higher peroxide; while from acetylene and other halogen derivatives of the organic radicles it liberates the halogen, and combines with the carbon so as to form cyanogen. It should be noticed, however, that the existence of most of these compounds has been proved up till now by spectroscopic analysis only; and Prof. Strutt, in mentioning this, draws attention to the fact that the compounds of ozone have as yet received very little attention. His suggested explanation of the new phenomenon, to the effect that the glow is due to the recombination of the dissociated atoms, seems to be the only one which meets the circumstances.

M. A. Turpain has had the good fortune to obtain evidence of the formation of a huge fireball or sphere of globular lightning, which seems to have been brought about from a flash of forked lightning striking a post equipped with an antenna set up by him for the purpose of registering electric storms. The formation of the fireball was witnessed by many spectators, one of the curious circumstances attending it being that the roof of the building where it fell was instantly swept clear of all dust, leaves, and other light substances, as if by the passage of a mighty wind. He thinks that the fireball was produced by the sudden fusing of the antenna, which made it necessary for the electric discharge to find a new path nearly at right angles to its former one; and he proposes to set up at Mauroc, on property belonging to the University of Poitiers, a post similarly equipped with an antenna bent at a sharp angle, and to see whether the phenomenon is reproduced. It is to be hoped that his experiments will be productive of some result, for the nature of ball lightning has till now remained a mystery, which has only been experimentally investigated, so far as one is aware, by Dr. Gustave Le Bon. M. Turpain's own discussion of the affair appears in the current number of the *Journal de Physique*, while photographs of the occurrence can be found in *La Nature* for April 22nd.

On the question of the determination of sex, mentioned in these Notes for last month, M. R. Robinson communicates to the *Compte Rendu* above quoted his theory that the sex of the infant is determined by the activity of the supra-renal capsules in the mother, females who are in what he describes as a state of "insuffisance surrenale" always producing female children. This, he says, he has observed in fifteen cases, and no exception to the rule has yet come under his notice. Hence, he argues, that carefully prescribed doses of adrenaline should produce male infants, and he promises to go further into the subject, stating at the same time that he puts forward the theory with great reserve. The difficulties in the way of effective experiment on the subject are considerable; but in the meantime it should be noticed that the supra-renal capsules have, as M. Robinson notes, before been recognized as the cause of the nutritive and digestive troubles frequently attending pregnancy, and that these have often yielded to the administration of adrenaline. M. Robinson quotes Dr. O. Schwarz (of Vienna) for proof that adrenaline added to a mixture of glucose and yeast increases the production of carbonic acid by fifty per cent. This, he says, is due to the transformation of the glycogen of the yeast into sugar by the adrenaline, and he thinks that in the same manner it increases the quantity of lipoids in the blood.

In the same *Compte Rendu* M. Pierre Bouvier states that, in his opinion, many aeroplane accidents are due to the sudden vertigo, and even paralysis, which is likely to affect the aviator from the difficulty which the organism has in preserving the equilibrium between its own internal pressure and the constantly varying pressure of the external atmosphere. The organs charged with the maintenance of this he declares to be certain manostatic centres in the medulla oblongata, and he has found their sensitiveness much increased by slight cauterization of the mucous membrane of the nose. He says he has used the same remedy with effect in arterio-sclerosis, and he quotes the case of a young aviator whose arterial tension was lowered by it from 22 to 16, with the result that whereas he formerly always

suffered severely from oppressed circulation and vertigo on returning to earth after flight, he has had no such symptoms for four months.

A new mode of attacking the Anopheles mosquito, which is now admitted to be the most active agent in the propagation of malarial fever, is announced. In the valley of the Po, where malaria is fearfully prevalent, the paraffining of the pools and ditches is found to be impracticable, as it has a deleterious effect on the rice fields which nourish the chief industry of the district. In these circumstances it occurred to the inhabitants, according to the *Bulletin* of the International Institute of Agriculture, to stock the ditches with fish in the hope that they would prey upon the larvæ of the mosquito. The scheme succeeded beyond expectation, the more so that the carp used for the purpose thrived exceedingly upon the diet thus provided for them, and increased so as to afford in their turn an increase in the food supply. F. L.

SOCIETIES.

ROYAL.—June 1.—Sir Archibald Geikie, President, in the chair.—The following papers were read: 'Experiments on the Restoration of Paralyzed Muscles by means of Nerve Anastomosis,' by Dr. R. Kennedy, 'The Morphology of *Trypanosoma evansi* (Steel),' by Col. Sir David Bruce, 'The Pathogenic Agent in a Case of Human Trypanosomiasis in Nyasaland,' by Mr. Hugh S. Stannus and Dr. W. Yorke, 'The Experimental Transmission of Goitre from man to Animals,' by Capt. R. McCarrison, 'The Action of Radium Radiations upon some of the Main Constituents of Normal Blood,' by Miss Helen Chambers, M.D., and Dr. S. Russ, 'The Mechanism of Carbon Assimilation,' Part III., by Messrs. Francis L. Usher and J. H. Priestley, 'A Contribution to our Knowledge of the Protozoa of the Soil,' by Mr. T. Goodey, and 'On the Anode and Cathode Spectra of Various Gases and Vapours,' by Mr. G. Stead.

SOCIETY OF ANTIQUARIES.—June 1.—The following were elected: as Ordinary Fellows, the Rev. James Davenport, the Rev. H. P. Stokes, and Messrs. S. H. Capper, A. O. Carle, F. C. Frost, H. R. H. Hall, G. E. Halliday, and J. H. Marshall; and as an Honorary Fellow, Mr. John Pierpont Morgan.

ROYAL INSTITUTION.—June 12.—The Duke of Northumberland, President, in the chair.—Miss A. Carthew and Lieut.-Col. A. W. H. Hornsby Drake were elected Members.—The Chairman reported the decease of the Dowager Duchess of Northumberland, and a resolution of condolence with the family was passed.

MATHEMATICAL.—June 8.—Dr. H. F. Baker, President, and temporarily Mr. J. E. Campbell, V.P., in the chair.—Mr. T. H. Gardner was elected a Member. Mr. S. Chapman was admitted into the Society.—The President announced that the De Morgan Medal for 1911 had been awarded by the Council to Prof. H. Lamb in recognition of his researches in mathematical physics.

The following papers were communicated: 'On the Roots of Multiple Theta Functions,' by Dr. H. F. Baker, 'On the Multiplication of Dirichlet's Series,' by Mr. G. H. Hardy, 'On the Range of Borel's Method of Summation of Series,' by Messrs. G. H. Hardy and J. E. Littlewood, 'On the Convergence of Fourier Series and of the Allied Series,' by Dr. W. H. Young, 'On some Two-Dimensional Problems in Electrostatics and Hydrodynamics,' by Mr. W. M. Page, 'The Determination of all Groups of Rational Linear Substitutions of Finite Order which contain the Symmetric Group in the Variables,' by Prof. W. Burnside, and 'On the Nature of the

Successions formed by the Coefficients of a Fourier Series,' by Dr. W. H. Young.

Informal communications were made as follows: 'Note on Mersenne's Numbers,' by Lieut.-Col. A. Cunningham, and 'On the Conditions that a Homogeneous Strain may be reducible to a Plane Strain and an Extension at Right Angles to the Plane,' by Prof. A. E. H. Love and Dr. T. J. I'A. Bromwich.

MEETINGS NEXT WEEK.

Mon. Surveyors' Institution, 8.—Discussion on 'The Position of Tenant Farmers in England and Wales on the Occasion of any Change in the Ownership of their Holdings.'

Tues. Statistical, 5.—Annual Meeting.

Science Gossip.

THE Medical Report of the Local Government Board has been issued as a Parliamentary Paper (post free 5d.).

TWENTY-TWO variable stars (four of which are of the Algol type) were discovered by Miss Cannon during examinations of the Harvard Map No. 52. Nine are situated in the constellation Ara. The range of variability is in most cases small, and no star at its brightest exceeds the eighth magnitude. The last (which will be reckoned in a general list as var. 45, 1911, Telescopii) was found independently by the late Mrs. Fleming by means of its spectrum, which she classified on a plate taken on September 30th, 1909.

ENCKE'S periodical comet is again approaching perihelion, which, according to Dr. Backlund's calculation, it will probably reach on August 19th. At the last return, in 1908, it was only observed (photographically) at the Cape of Good Hope; but this may have been due to its position with regard to the earth. If seen in Europe at the present return, it will probably be during next month, early in which it will be situated in the constellation Taurus, to the north-east of the Pleiades.

THE fourth number of vol. xl. of the *Memorie di Astrofisica ed Astronomia* of the Società degli Spettroscopisti Italiani has appeared, containing principally a paper by Prof. Riccò on solar protuberances observed on the 28th of last April, a note by Signor Carnera on reference-stars in the Catania photographic catalogue, and a continuation of the spectroscopical images of the sun's limb observed at Rome, Palermo, and Kalocsa from the 22nd of September, 1883, to the 22nd of August, 1887.

ANOTHER small planet was discovered photographically by Prof. Max Wolf at the Königstuhl Observatory, Heidelberg, on the 22nd ult.

FINE ARTS

A *History of Painting in Italy—Umbria, Florence, and Siena—from the Second to the Sixteenth Century*. By J. A. Crowe and G. B. Cavalcaselle. Edited by Langton Douglas, assisted by G. de Nicola. — Vol. IV. *Florentine Masters of the Fifteenth Century*. (John Murray.)

A NOTE by the publisher in this fourth volume of the new edition of Crowe and Cavalcaselle refers apologetically to the fact that seven years have elapsed since

the date when its publication was promised, and holds out the hope that the remaining volumes will be issued in the course of the next twelve months. The news will be welcome to those who some years ago, with a choice of editions, preferred that which was to contain the latest revisions of the authors, together with notes embodying the results of more recent research. The magnitude of the latter part of the task is in itself almost sufficient to account for the delay. Since Crowe and Cavalcaselle wrote, the literature of Italian painting has become very extensive. Many of the most important contributions to it have appeared in foreign periodicals, and the references to these in the present edition are numerous.

The notes serve to show how well for the most part the judgments of the authors have stood the test of time. In more than one instance, as the editors point out, they have anticipated the path of modern discovery by their verdict. The qualities of the book in its original form are too well known to need description. A passing reference may, however, be made to the marked avoidance of fine writing, the sparing use of analogy or picturesque description, and the combination of documentary and stylistic evidence to serve each as check upon the other. As compared with certain other writers on Italian art, Crowe and Cavalcaselle are mechanical, but if infinite capacity for taking pains be genius, then they had it or something very nearly approaching it; as a consequence, they have written what bids fair to become a classic of reference.

The division of the new edition into six volumes causes each to possess considerably greater unity than was possible before. Whereas the record passed abruptly from Florence to Siena, and from Siena to Umbria, the volume before us deals exclusively with the work of Florentine masters of the fifteenth century. It therefore treats of Florentine art at what is undoubtedly the most interesting stage of its development. The preceding century, dominated by the genius of Giotto, had closed in the comparative stagnation of derived impulse. The ensuing stage was one of spontaneity and growth along many lines of development. As in 'The Progress of Poesy,' "a thousand rills their mazy progress take." The streams flow without break or barrier, with ever-increasing current, into the high sea of the Renaissance.

The names of painters which form the titles of the various chapters of this volume are a witness of this rich diversity. Of only two can it be said that their art is essentially imitative with no independent standpoint of theory. The others reveal Florentine art in its amazing vitality, gaining new power of representation by closer study of the laws of structure, of perspective and light and shade, of the nature of pigments and the relation of colours, and manifesting at the same time an unremitting devotion to

the spirit of beauty. To the results of this almost inexhaustible variety of effort Crowe and Cavalcaselle did more even-handed justice than any other writers by careful study of record and temperate measure of appreciation. A few of their conclusions have become invalidated; others need restatement, or must be supplemented on account of more recent discoveries.

Scientific criticism has achieved some of its most signal triumphs with regard to pictures which were formerly either assigned to Botticelli or classed as school pieces under his name, and here the quality of the editing may be tested. As an instance of this we may take the case of Jacopo del Sellaio, who is mentioned by Crowe and Cavalcaselle, on the authority of Vasari, as one of Fra Filippo's assistants of whom no works were known. The present work provides an admirable summary of the present state of critical knowledge, as based on documents and the art of the connoisseur, respecting this eclectic painter, whose personality was first revealed by the researches of Dr. Mackowsky, who ascribes to him no fewer than fifty pictures. Another of the same group is Francesco di Giovanni Botticini, to whom many works which formerly passed under the name of Botticelli are now assigned, including the Palmieri 'Assumption of the Virgin' in the National Gallery, which is referred to by Crowe and Cavalcaselle as one of Botticelli's loveliest and most remarkable productions. Botticini is now treated with sufficient detail to show the various influences to which he was subjected in the course of his artistic life.

In a less sympathetic vein is the reference to that more elusive creation of modern criticism known as "Amico di Sandro," against the homogeneity of whose artistic output, as defined by his sponsor, the editors deliver one well-directed blow, the effectiveness of which is perhaps a little marred by a cavil at the attempt at nomenclature on just the lines foreseen by the author at the christening.

The work of the editors is less effective in those few cases where the position taken up by Crowe and Cavalcaselle is directly at variance with the conclusions of modern criticism. It was necessary to respect the integrity of the original text and to separate the editorial additions, but the short foot-notes which are intended apparently to undermine and render untenable the authors' position at various points of their statement are more distracting to the attention of the reader than successful in their purpose. They scarcely do justice to the full strength of the case for revision of judgment as to the authorship of the frescoes at S. Clemente at Rome and some of those in the Brancacci chapel in the Carmine at Florence, which the authors ascribed to Masaccio, and which later critics with singular unanimity have assigned to Masolino. Crowe and Cavalcaselle, always

cautious and sure-footed, seem to have recognized the stylistic resemblances between the more primitive of the work in the Brancacci chapel (such as 'The Raising of Tabitha'), the frescoes at S. Clemente, and those at Castiglione d'Olona which bear Masolino's signature, and of which the authorship has never been held in doubt. But they were tied up in a maze of chronological difficulties, partly of their own creation, and these prevented them from solving the question in the most natural manner, namely, by rejecting Vasari's unsupported statement as to Masaccio's authorship of the works at S. Clemente, and then by attributing these works to Masolino together with certain of the frescoes at the Brancacci chapel, where we know Masolino to have worked, on the evidence both of Vasari and of Albertini. These attributions rest primarily on the basis of the strong stylistic similarity existing between these works and the signed work at Castiglione d'Olona, which apparently was not known to Vasari.

The editors' notes reveal a wide range of connoisseurship. The unduly polemical tone in which some of the conclusions were presented in former volumes has not escaped comment. The reproach is still in some cases deserved. It is desirable on many grounds that the editing of a classic should be carried out in as impersonal a manner as is consistent with the renewed vitality which is the aim of the publication. Of this renewal at all events there can be no question, but there is some unnecessary raking of embers, of which in conclusion we present an instance. Crowe and Cavalcaselle ascribe to Fra Filippo Lippi a picture in the Maitland Collection of St. Peter and St. John healing the lame man. A note states that this predella picture is now in the Berlin Gallery, having been previously in the possession of Mr. Langton Douglas, who attributed it to Francesco di Giorgio, and that, like other works of Francesco di Giorgio, it reveals very strongly the influence of Girolamo da Cremona. This is an entirely pertinent revision of the statement of the authors both as regards the place and origin of the picture. The note goes on, however, to say that the editor was the first to point out several years ago the intimate connexion that existed between Francesco di Giorgio and Girolamo da Cremona, and that Mr. Berenson, writing more recently, has treated this connexion as though it were a new discovery, and that Mr. Berenson gives another part of the same predella to Girolamo, with which opinion Mr. Langton Douglas does not agree, and therefore marshals a number of arguments of a not very cogent character why both parts ought to be assigned to Francesco. The work of confuting another critic is apparently so absorbing that we are not even told where this other part of the predella is or what is its subject, and the omission is the more noteworthy because this picture is not mentioned by Crowe and Cavalcaselle.

OUR LIBRARY TABLE.

Art in France. By Louis Hourticq. (Heinemann.)—No more useful book of reference, both to artists and amateurs in art, can be imagined than this new volume of the "Ars Una" series. The 850 illustrations, too small for purposes of study, are sufficient to recall to memory works of art which have been already seen, and even to give some idea of an unknown picture to a student familiar with the bulk of the artist's output. The account of French art is, as might be expected from the official position held by the author, accurate and full, though compressed; and his personal opinions on matters of taste, if they can be suspected, are never obtrusive. The translation is adequate, though it loses the graces of style in the attempt to render the original literally.

We do not propose to enter on a criticism of M. Hourticq's catalogue of French art, but some of his dicta seem to reflect a certain narrow-mindedness open to question. He distinguishes, for example, France from the rest of the world by saying: "No one would hesitate to say which was the Golden Age of Greece, Italy, Spain, England, or Flanders. In France it is impossible to pronounce without scruple." This is merely to say that M. Hourticq knows a good deal about French art, and less about that of the other countries. To pronounce upon Greek art is easy, since so many of its products have been destroyed: we have no conspectus of Greek paintings, or the work of whole schools. But what Englishman could hope for general acceptance in pronouncing any period the Golden Age of English art? The ages of Van Eyck and of Rembrandt in Flanders are predominant now; a while ago Rubens held the field. We can fix a Golden Age for Italy now; a century ago the Golden Age was quite other. Even for France the cosmopolitan critic wonders at the bias of French experts, who lay so much stress on the national achievement in painting, while they attach little importance to the surpassing excellence of their sculpture, in which they have produced a succession of masterpieces in the unbroken tradition of classic art. M. Hourticq cannot be charged with neglecting this side of his subject; indeed, as things go, he has devoted a large amount of space to it, and we suppose even the bad art he has had to illustrate has its public. Anyway, his volume is an excellent handbook.

The English Staircase: an Historical Account of its Characteristic Types to the End of the Eighteenth Century. By Walter H. Godfrey. (Batsford.)—The story of stone staircases from Norman to Tudor days is given in outline by Mr. Godfrey, but he reserves his special attention for the comparison and description of "the new methods of the Early Renaissance, the massive splendour of the Jacobean type, and the quiet dignity of the Later Renaissance." The pierced panels of flowing foliage, characteristic of the Carolean staircase, which for a time put the turned baluster out of fashion; the graceful elegance of the Georgian stair, and the ingenious application of wrought ironwork in the designs of the close of the seventeenth and of the eighteenth century are all carefully discussed and classified.

The staircase appeals specially to the architectural student. Its evolution presents an almost bewildering diversity of methods. So soon as the newel or circular form was abandoned, the running of the

staircase in an oblique direction from floor to floor formed an almost continuous puzzle both to the later Gothic and the Classic designers, and remains to the present day one of the chief difficulties that confront the ambitious young architect of either domestic or public buildings of any pretensions. This volume, therefore, cannot fail to be of particular value to architects, especially as the illustrations are not only numerous, but also of genuine merit. The fifty-one plates, specially photographed, have been well reproduced by the collotype process, whilst in the text occur fifty-five illustrations from measured drawings of complete stairs or their salient details.

Mr. Godfrey draws attention to the fact that the newel stairway was not the only English form in mediæval days. A plain straight flight of stone steps between two walls was now and again employed when required for the daily use of many people, and there is a fine example of this in the Norman keep of Castle Rising. Religious houses, too, afford certain instances; thus a straight flight leads to the refectory on the first floor of the Vicars' Close at Wells; and a good flight, with a stepped parapet on the outer side, leading to the canons' dormitory, forms a notable feature of the priory church of Hexham. The entrance to the keep of Farnham Castle affords another well-known example, though not cited by Mr. Godfrey.

The plates illustrate admirably the richness and variety of work so soon as domestic staircases began to be constructed of wood. Several of them present fairly well-known instances, such as the stairways of the Commandery, Worcester; Hatfield House, 1610; Aston Hall, Warwickshire; and Ham House, Richmond. But the majority are examples which have seldom, if ever, been previously pictured. Amongst these may be mentioned Oakwell Hall, 1583; the Talbot Inn, Oundle; and Dawtry Mansion, Petworth. There are two good plates of the staircase erected for the Duke of Chandos in 1715 at Canons, and moved to Chesterfield House, Mayfair, some thirty-five years later, when the vast mansion was pulled down; the iron balustrades are a fine achievement. It is a pleasure to find a picture of the simple but graceful Georgian balusters of 44, Great Ormond Street. This street was a fashionable quarter in the latter half of the eighteenth century, and it was from Lord Chancellor Thurlow's residence in Great Ormond Street that the Great Seal was stolen in 1784. Several houses, in addition to No. 44, retain graceful staircases and chimney pieces.

It is a little surprising not to see either a description or illustration of the fine bold staircase of Milton Court, Dorking, circa 1600; it is somewhat peculiar, for it runs from the basement to the top of the house in an annexe of its own. The dignity of this staircase was the chief cause of the preservation of the house when it had been doomed to destruction. Another staircase that we miss, from a much smaller house, is curiously enough of a like name. Milton Manor, near Northampton, has beautiful Carolean pierced foliage designs in the place of balustrades. But Mr. Godfrey supplies excellent plates of this style from Dunster Castle and from a house in the High Street, Guildford. He might have strengthened his statements as to the introduction and use of the spiral baluster by reference to altar-rails of that description, the dates of several of which are exactly or approximately known.

If a further edition of this handsome and informing volume is called for, the author might devote a little attention to certain

west-gallery staircases still surviving in churches, for they are sometimes of uncommon design. The staircases in Odiham Church of 1632 are notable, and so too, in a different style, are those of the double-tiered west gallery of Cowley Church, Middlesex, erected in 1780. Under the tower of Whitchurch, Hampshire, is a well-carved fifteenth-century oak casing to a flight of newel stairs of single blocks of wood; and in a similar position at Oxted is an interesting tower staircase of much later date. It might, too, be well to note pulpit stairs. Some of those of Georgian days were graceful in design.

The Castles and Walled Towns of England. By Alfred Harvey. (Methuen & Co.)—Mr. Harvey, in these useful and attractive pages, considers the subject of English castles in the broad acceptance of the term, that is to say, masonry structures intended for the purpose of residence and defence, whether purely or preponderatingly military, or whether more important as residences than as fortresses. With this scheme he has associated an account of the mural defences of towns, a subject upon which little has hitherto been written, except in the cases of the walls of York, Chester, Southampton, and one or two other prominent instances. To ensure accuracy in this much-neglected field of historical archaeology, Mr. Harvey

"has made a perambulation not only of every town known to have been walled in the Middle Ages, but of every town which it appeared to him should or might have been—a task involving some little labour and the occasional penetration of insalubrious localities, but a method of exploring an unknown town, whether at home or abroad, which well repays the trouble."

In dealing with the large subject of the castles of England, a system of classification has been adopted which has the advantage, with a few exceptions, of following a chronological order. The whole series is divided into two main types, namely, "Castles with Keeps" and "Keepless Castles." Each of these types presents three well-marked varieties. The castles with keeps are subdivided into those with rectangular, shell, and circular keeps. The keepless castles also divide themselves into three groups, namely (1) castles in which the keep was discarded, and its place taken by a main ward of no great area, surrounded by a lofty wall flanked with mural towers; (2) the true Edwardian or concentric castles, in which the main ward is surrounded by a second and sometimes by a third line of defence; and (3) the later castles, wherein the idea of defence was more or less subordinate to that of domestic comfort.

The chapter which deals with the geographical and topographical position of English castles is of no small interest and value. Castles are by no means uniformly distributed, though they are to be found in every county of England and Wales. When their military importance is considered, it is only natural that they should be found with great frequency on the Welsh and Scottish frontiers, and also on or near the coast of the south-eastern group of counties, where the landing of a Continental foe was most to be dreaded. They also abounded in the district round London, which would be the objective of any foreign invasion or domestic rising. London itself had not only the Tower but also Baynard's Castle, just outside the walled city, the last traces of which have disappeared during recent years.

Between London and the English Channel castles are of most frequent occurrence; the county of Kent alone had at least thirty-

eight, the majority of which still remain. The chief highway to the Continent, always crowded with travellers, lay through Rochester and Canterbury, terminating at Dover, and each of the three possesses one of the finest Norman keeps. On the south coast, in addition to Dover, there were the castles of Folkestone, Saltwood, and Romney; whilst the entrance to the Medway was guarded by a powerful castle at Queenborough. It was also on the shores of Kent that a large proportion of Henry VIII.'s coast castles were erected, among which those of Walmer and Deal are prominent. Surrey on the contrary, described here as "a county of poor soil and sparse population," possessed but few castles, the only two of importance being the royal castle of Guildford and the episcopal castle of Farnham. The Midlands were but scantily provided with fortresses, chiefly because they were at a safe distance from both seaboard and land frontiers, but partly no doubt, as Mr. Harvey shrewdly surmises, because these counties were usually the property of a few great lords.

In discussing the question of Norman castles with rectangular keeps, three examples are wisely chosen for special description and illustration, namely, those of Hedingham, Middleham, and Richmond. Durham, Berkeley, and Totnes are selected as examples of shell-keep castles; whilst we find illustrations of the circular keep in Conisborough, Oxford, Pembroke, Caldecott, Skenthroft, Launceston, and Odiham. Of the keepless castles particular attention is given to the Edwardian examples of Harlech, Kidwelly, Caerphilly, Conway, Beaumaris, and Ludlow. Of the later castles Bolton and Ashby-de-la-Zouch are well described and illustrated.

The section on the defences of walled towns is notable, and for the most part original. Plans are included of the mediæval walling of Leicester, Southampton, and Conway. A valuable appendix supplies a list of castles in England and Wales existing or known to have existed. They are arranged under counties, and distinguishing marks show whether there are remains of great or small extent, or whether the site is now marked only by earthworks. This is the first time that such a thorough list has been attempted, and it is complete and accurate, except in a few cases of trifling moment.

The book is remarkably well illustrated, both by plates and drawings in the text. It was a good idea to give several illustrations of castles from borough arms or seals.

A CENTURY OF ART AT THE GRAFTON GALLERY.

THE attempt of the International Society to illustrate by this collection "the major tendencies of the last hundred years of effort and development in England and France" has resulted in such a prodigious variety show that a neophyte might well gasp at the prospect of trying to understand the artistic movement of a period in which even the more important currents were so numerous, so diverse, so apparently unrelated. In part this impression is misleading, resulting from the unscientific habit of cataloguing works of art under the names of the men who produced them. The organizers of the exhibition have thus striven to get together examples of most of the artists who have had any important part in moulding the movement of the period in question. These are many, and, in

reaction from an ideal of uniformity, obviously diverse in character; but the diversities are often superficial, and add nothing essential to the value of the work. If we were in the habit of classifying pictures as we classify other organisms, by their structure and functions, we should recognize that a relatively restricted number of technical ideals—of kinds of vision—sufficed to satisfy even this restless period by their combination in varied proportions. Mathematicians know how rapidly the possible combinations of a few elements mount up. The nineteenth-century artist was particularly keen to discover for himself some fresh one, and so to disguise it with extraneous oddity as to make it appear an entirely fresh departure unrelated to the practice of other artists. To some minds this was pleasant—to others disturbing, and the would-be originals exhausted themselves in sarcasm at the expense of the critics, who, they averred, rejected any genius they could not pigeon-hole. Yet, after all, a taste for unity and sequence is more of the essence of æsthetics than the thirst for surprise and disorganizing novelty.

This apology for the Philistine of yesterday will seem reasonable to any one who suddenly returns from the study of Oriental art, with its firm hold on the essentials of design, to the atmosphere of petty differences, the febrile effervescence, of European art in the nineteenth century. The activity is wonderful, but what a waste of energy! How large a percentage of the substance of each innovation is mere change for the sake of change!—a purposeless departure from the normal aims of art, which in its turn will provoke reactionary excesses in another direction. Two landscapes, *Seascape and Cliffs* (5) by J. Crome and *Waterfall* (16) by John Sell Cotman, date from the beginning of the century 1810–1910, and contrast with the more typical work of the period because they are examples of contented pre-occupation with beauty of a familiar sort, claiming no particular originality. They differ but slightly from the best landscape paintings of the seventeenth and eighteenth centuries, and, after all, are more permanently satisfying than most of the experiments which followed. Something doubtless has been gained by those experiments, but much more has been lost, although the complete absence of Impressionist work (somewhat strange in an exhibition claiming to represent the activity of the nineteenth century) puts the later developments of landscape art really outside our subject. The English Pre-Raphaelite movement is perhaps, on the other hand, given more than its proper importance. It is finely represented by Holman Hunt's *Hireling Shepherd* (42), wherein the draughtsmanship, which feels its way over surfaces, never losing touch with matter that it may the more subtly measure space, is to some extent justified because the artist deals with a moment when nature is bursting with vitality and every inch of surface radiates life and heat. The equally well-known early Millais, *Ferdinand lured by Ariel* (48), has not the same justification, and we are wearied by the trivial multiplicity of detail which has neither the intrinsic significance of that of 'The Hireling Shepherd' nor the symbolic value which belongs to detail in those classical paintings least directly inspired by nature, and which comes from severe subordination to the general structure of the picture. The old academic commonplace which enjoins variety within unity as a fundamental necessity of art is rather strengthened than otherwise by the sight of so many artists straining now this way, now that, from the norm which their predecessors

strove to keep to. Whistler is from this point of view the natural response to Holman Hunt, and the choice of the charming *Cremorne Nocturne* No. 2 (87), with its great stress on unity even—we might say above all—of an obvious sort, and its rather emasculate and empty characterization, as representing Whistler's art, seems to mark the determination of the selecting committee to show both the extremes of the period illustrated, and their own catholicity of admiration, which ranges from the 'Cremorne Nocturne' to *The Light of the World* (53).

The latter picture, egregiously common when judged as painting, marks, as do many of the Rossettis in the present show, the use of a literary motive which was so noticeable a feature of the work of the latter half of this period in England. The severely literal delineation of the superficial which characterized the English Pre-Raphaelites had not often in Rossetti the splendid illustrative force of 'The Hireling Shepherd' (the *Girl at the Window*, 62, is a rare exception, and more typical of Hunt than of Rossetti); and if, on the other hand, he never sinks to the level of 'The Light of the World,' the reason is that, alongside of the perfunctory adherence to fact which he carried as a dead weight, in obedience perhaps to Ruskin, he commanded a line not so literal as it appeared to be, but composed with great dramatic power. This, the fertile element in his rather miscellaneous production, is what saves his otherwise bad picture *The Return of Tibullus to Delia* (38). Here, and indeed usually, it is weakened by his pretence at realism and his mania for picturesque accessories, just as with Burne-Jones a power of design rather less dramatic is blunted by a nerveless characterization and perpetual softening of transitions akin to Whistler's on his weaker side. In this respect the two panels *St. Frideswide in the Pigstye* (39) and *The Death of St. Frideswide* (52), are not quite a choice typical of Burne-Jones, but rather represents an attempt to disentangle his formative from his disintegrating influence. Had this been done more frequently in the show, we might have had an exhibition presenting fewer personal idiosyncrasies, but a simpler statement of the vital forces of the time.

We do not mean by this criticism to imply that the show at the Grafton Gallery is not well worth a visit, or many visits. Indeed, so long as we are destitute even of names for the main impulses which have animated artistic activity for the last century, the usual classification by artists, and, if fuller classification is attempted, by date, is perhaps inevitable. Certainly, however, the arrangement does not make for simplicity. Even such a relatively simple branch of art as black-and-white drawing, when illustrated in this fashion, makes demands on the adaptability of the visitor which are somewhat fatiguing.

In dealing with black-and-white, in which, works being more or less of a size, their disposition does not present such insurmountable difficulties as is the case with pictures, some rough classification according to the kind of vision seems possible. At the outset of the period in question Rowlandson (123, 124) for all his calligraphic ease of line, represents the plastic conception of drawing; Fuseli (119-121) and Blake (125-129), the more abstract use of line. Men like Stevens and Delacroix obviously group with the first, grading imperceptibly through Wilkie and the like to colourless imitation, through Millot and Daumier to

an art almost as abstract as that of Blake. Beardsley is obviously of the other family, which again shades off through Rossetti and Millais towards literalism. M. Rodin as a draughtsman coquettes between the two modes. Keene designs in plastic fashion, but with a certain raggedness which calls for his overlay of colour-suggestion and the witchery of mysterious lighting to trim his work into compactness.

One of the best features of the show is a small but admirably representative collection of the work of the President, M. Rodin.

THE GOUPIL GALLERY.

THE exhibition of the work of Mr. Tom Mostyn is the more important of the new arrivals at the Goupil Gallery. Mr. Mostyn has a natural gift of imagination, but has never had the severe mental training necessary to enable him to sustain a flight of the imagination coherently in the same strain, and to maintain every element in his picture—draughtsmanship, illumination, the treatment of local colour—at a consistent degree of abstraction. For this he is hardly to be blamed, for there was and is little enough of such training to be had. One can imagine a painter of vaguely romantic aspirations (sensible enough to know that these aspirations do not suffice to fit him out as an artist) seeking in the ordinary Academies of our day instruction in the principles of his art. He obtains at such institutions a certain education in the practice of realistic painting, and Mr. Mostyn's figure pictures suggest the quality of the instruction to be gained. Here he seems in despair to give free rein to fancy, trusting entirely to his instinct for improvisation. It is a lesser mistake than a literal painstaking copying of nature for such a temperament as Mr. Mostyn's, but we miss the greater refinement he might have won with more insight into the nature of artistic conventions and more respect for the massive structure of his paint. The minor rhythms lure him from his main theme. He is prone to overtrim with spangles and lacework a design not forcible enough in its main contrasts to carry such adornments. He works by means of light, but does not show sufficient consistency in maintaining it at a given angle to make it a convincing revealer of form. In his use of line and colour alike he frequently drops into mere easy picturesqueness, and forgets that in imaginative work above all it is fatal if the exceptions obscure the rule.

We thus see an undoubtedly genuine inspiration falling short of full realization for want of such a grasp of the principles of the rhetoric of painting as any student of Poussin would probably have received.

One painting by Mr. Romaine Brooks has a theme of obvious chiaroscuro which the artist is content to utilize frankly for what it is worth. No. 4, *Pink Dress and Turkey*, is a satisfactory study, the sequence of planes from light to shadow, and the two or three similar notes of colour being well observed. The other works, however, are inferior, the light effects being so subtle that their structure has escaped the artist's perception, and left him with empty hands and enormous canvases to furnish.

SALES.

MESSRS. CHRISTIE sold on Friday, the 9th inst., the following works, the property of Mr. J. D. Charrington. Drawings: Rosa Bonheur, *Landes Peasants going to Market*, 220*l.* C. Fielding, *A View of Culver Cliffs from Bembridge, Isle of Wight*, 325*l.* Birket Foster, *Turnberry Castle, Ayrshire, the early home of Robert Bruce, 131*l.**; *The Rialto, Venice*, 115*l.* J. Israëls, *The Treat*, 441*l.* Pictures: J. Linnell, *The Mill*, 430*l.* R. Madrazo, *The Music Lesson*, 262*l.* J. Phillip, *Meal Time*; or, *Turn about is Fair Play*, 262*l.*

The remainder were from various properties. Drawings: E. M. Wimperis, *The Ferry*, 162*l.* J. Maris, *The Barge Horse*, 225*l.* C. Fielding, *A River Scene, with classical buildings, boats, and figures: sunset*, 178*l.* Sir E. Burne-Jones, *Venus Epithalamia*, 304*l.* Pictures: Sir E. Burne-Jones, *The King's Daughter: Story of St. George and the Dragon*, 273*l.* F. Holl, *General Viscount Wolseley*, 304*l.* T. Paed, *A Gipsy Mother and Child*, 257*l.*

The same firm sold on Monday last the following prints and engravings: *Cottagers, after Morland*, by W. Ward, with title in etched letters, 54*l.* *A Visit to the Boarding School, and Visit to the Child at Nurse, after and by the same (a pair)*, printed in colours, 178*l.* *The Affectionate Brothers, after Reynolds*, by F. Bartolozzi, printed in colours, 110*l.* *Lady Smyth and Children, after and by the same*, printed in colours, 336*l.* *Miss Farren, after Lawrence*, by F. Bartolozzi, printed in colours, 399*l.* *The Fortune Teller, after Owen*, by C. Turner, printed in colours, 60*l.* *Countess Gower and Daughter, after Lawrence*, by S. Cousins, first state, 152*l.* *Lady Louisa Manners, after Hoppner*, by C. Turner, 173*l.* *Blind-Man's Buff, after Morland*, by W. Ward, printed in colours, 60*l.* *The Angler's Repast, after and by the same*, printed in colours, 94*l.* *Cottager, and Villager, by P. W. Tomkins (a pair)*, printed in colours, 115*l.*

On Thursday and Friday in last week Messrs. Sotheby sold the following prints: J. R. Smith, *Narcissa and Flirtilla*, 58*l.* J. Hogg, *after W. Peters, Sophia*, in brown, 47*l.* F. Bartolozzi, *after Reynolds, Lady Elizabeth Foster*, 47*l.* J. R. Smith, *after H. Walton, The Fruit Barrow*, 46*l.* S. Cousins, *after Lawrence, Master Lambton*, 120*l.* Sir F. Seymour-Haden, *Études à l'Eau-forte*, 210*l.* D. Y. Cameron, *Notre Dame, interior*, 65*l.*

Fine Art Gossip.

WE congratulate Prof. Lanciani, our learned correspondent from Rome for many years, on being raised to the rank of Senator, and receiving at the same time from the King of Italy the Commandership of the Ordine des SS. Maurizio e Lazaro.

THE committee of the Association Taylor has awarded the Prix Galimard-Jaubert, of the annual value of 1,200 francs for four years, to Mlle. Marchal for her plaster group 'Parmi les Roses,' exhibited in this year's Salon.

THE death at the age of 71 is announced from Berlin of Prof. Johannes Otzen, the architect. He studied at Hanover under Hase, and devoted his talents to adapting the Gothic style to the requirements of modern church architecture. Several of the principal churches in Berlin, Hamburg, and other important towns were his work. He was for many years Professor at the Technical College in Charlottenburg, and Director of the chief Studio of Architecture in the Berlin Academy of Art.

CRITICS will shortly have a chance to examine the Jan van Eyck portrait in the Bruckenthal Collection at Hermannstadt, which is to be lent to the Munich Gallery.

To the same Gallery, according to the *Ciccone*, some of the finest pictures in the Nemes Collection at Budapest are to be

lent for some months. This will be welcome news to many, as the collection is one of the most remarkable among the private galleries which have been formed in recent years. The arrangement is due to the initiative of the energetic Director at Munich, Herr von Tschudi.

EXHIBITIONS.

SAT. (JUNE 17).—Mr. William Brock's Water-Colours of Normandy, Carroll Gallery.
—Early Persian Ceramics, 123, New Bond Street.
—M. Lucien Frank's Works, Rowley Gallery.
—Mr. F. F. Ogilvie's Water-Colours of Egypt, Modern Gallery.
—Water-Colours by Mr. A. Romilly Fedden, Mrs. Eastlake, and Mr. C. H. Eastlake, and Drawings by Aubrey Beardsley, Baillie Gallery.

MUSIC

THE WEEK.

COVENT GARDEN.—*Samson et Dalila*.
Roméo et Juliette. *Aida*.

AN exceptionally fine performance was given of Saint-Saëns's 'Samson et Dalila' on Wednesday in last week. M. Franz impersonated Samson, and by his effective singing and dignified acting created a deep impression. Madame Kirkby Lunn, who has been the Dalila since the opera was first produced here, also felt his influence.

On the Friday Gounod's 'Roméo et Juliette' was heard for the first time since 1906. Madame Melba has long been associated with the opera, and in the music assigned to Juliette she has many opportunities of displaying her beautiful voice to advantage. Again in this work M. Franz, though occasionally his intonation was not quite true, proved an excellent Roméo. The performance generally was very good, and the orchestral playing, under the direction of Mr. Panizzi, most satisfactory.

There is nothing new to say about Mesdames Destinn and Kirkby Lunn as Aida and the Princess in Verdi's opera, nor of Messrs. Martin and Gilly, who as Radames and Amonasro distinguished themselves; but mention must be made of a Russian artist, M. Sibiriakoff, who last Saturday impersonated Ramfis. The part is only small, but the singer displayed a genuine basso voice, and is evidently an experienced actor. He will no doubt appear in parts which will enable him more fully to display his gifts.

QUEEN'S HALL.—*Recitals by Rosenthal and Paderewski*.

MORIZ ROSENTHAL AND IGNAZ PADEREWSKI are two of the most notable pianists of the day, and both have recently given recitals. The former yesterday week played Beethoven's Sonata in E (Op. 109), and while admiring his beautiful tone, perfect technique, and thoughtful reading of the music, we could not but notice a lack of emotion. In Schumann's 'Carnaval' it was different. With this he seemed in fuller sympathy, displaying character, colour, and warmth. The technical difficulties here are greater than in the Sonata, and, as we have often noticed, it is only music which brings Rosenthal's executive powers into full play that makes

a really strong appeal to him. Some of the numbers were perhaps taken at too rapid a rate, and in the concluding March certain effects were concessions to public taste. Liszt and Rubinstein, the two greatest pianists of the past, yielded occasionally in the same manner to the public love for sensation. Such considerations do not affect Rosenthal as a rule, except when he is interpreting music of a purely virtuosic character.

M. Paderewski, who has not appeared in London for several seasons, gave a recital on Wednesday afternoon. The pianist, like all great artists, has days when he feels specially in the vein, and on Wednesday his renderings of the first three numbers of his programme were remarkable for intellectual grasp of the music breadth, strong emotion, superb technique, and fine gradations of tone. He first played the Brahms Variations on a Handel Theme, and there was a sense of bigness all through the performance. Next came Beethoven's comparatively early Sonata in D minor, Op. 31, No. 2, yet one of his most poetical. Of this M. Paderewski's reading was truly classical, though full of life, feeling, and warmth. This was followed by Schumann's Sonata in F sharp minor, Op. 11, a work full of earnest thought and romantic feeling. The pianist gave so glowing a rendering of the music as to make one forget that all of it is not equally inspired. The only other pianist who could be compared with him was Clara Schumann, but she had neither the strength of finger nor the commanding technique which he displays. The conception of the music with both was, however, almost identical.

Some Chopin solos followed, and there was, of course, some very clever, beautiful, delicate playing, but nothing to equal what had gone before.

Massenet and his Operas. By H. T. Finck. —*Franz Liszt and his Music.* By Arthur Hervey. (John Lane.)—Mr. Finck describes the success of Massenet as one of the puzzling phenomena of modern musical history, yet he himself gives a satisfactory explanation of it. He admires Massenet's music, partly because of its refined orchestral colouring and piquant harmonization, partly because of its frank and ingratiating melodiousness; and those are the very qualities which attract the general public. Our author also refers to the great success of four of the operas ('Le Jongleur de Notre Dame,' 'Hérodiade,' 'Sapho,' and 'Griséidis') in New York. But those performances were given with fine casts, an additional and strong attraction.

Massenet's operas 'Le Roi de Lahore,' 'Hérodiade' (under the title of 'Salomé'), 'Manon,' 'Le Cid,' 'Werther,' 'La Navarraise,' and 'Le Jongleur' have all been produced at Covent Garden, but not one of these has achieved popularity—not even 'Manon,' which is still occasionally given. This is strange. Wagner, Verdi, and Puccini have certainly proved powerful rivals, but their works are also admired in America. 'Le Jongleur de Notre Dame' is a really beautiful work, and unique of its

kind; and we believe that if, as with 'Pelléas et Mélisande,' the Syndicate had persevered with it in spite of the cold manner in which it was received, its merits would at last have been recognized. Like Debussy's work, it is very different from ordinary operas; hence, we presume, it caused disappointment.

Mr. Finck's book is welcome as a first attempt to describe Massenet's art-work. Moreover it comes at an opportune moment, since 'Thaïs' is to be produced at Covent Garden during the present season. Mr. Hammerstein also is likely to give prominence to Massenet's operas when his Kingsway house opens in the autumn. The volume contains many illustrations, also an excellent portrait of the composer.

Liszt and his art-work have been fully described and discussed by Lina Ramaan in her great biography, but Mr. Arthur Hervey's new book is most acceptable, for he owes little or nothing to the work just named, and, as he justly remarks in his Introduction, "comparatively little has been written in England about Liszt, outside the pages of biographical dictionaries and histories of music." The forthcoming centenary of Liszt's birth is an event which naturally suggests a review of one who "occupies a unique place in the musical Pantheon." Liszt virtually discovered Wagner, and in many ways helped him to mature his great gifts, and produce the works which have immortalized his name. For this, and for many kind acts Mr. Hervey's praise of the man is fully justified. The opinions expressed with regard to Liszt as a composer may, however, appear to many, as they do to us, too eulogistic. Every serious musician recognizes Liszt as a gifted pioneer, but many would not endorse the high opinions expressed with regard to him as a creative artist. For example, of the Sonata in B minor we read: "In point of originality of conception, thematic invention, depth of thought, and emotional feeling, it has not been surpassed by any other in the entire range of pianoforte literature." Again, Mr. Hervey's admiration of the Symphonies and Symphonic Poems seems excessive.

There is, however, much in the volume which is not only interesting, but will also appeal to all musicians who have an open mind. Mr. Hervey reminds his readers that "Liszt's larger and more important works are persistently ignored," such as the sacred works; and this is perfectly true. He says that "no composer perhaps has been more misunderstood and more misjudged," and there is also truth in this. Moreover, though pianoforte pieces by Liszt are constantly being played, Mr. Hervey mentions early sets of pieces ('Les Années de Pèlerinage') which Liszt wrote for the few, not, as he said himself, for the crowd, and which are rarely heard.

Musical Gossip.

MR. JOSEPH BENNETT, who died last Monday in his native village, Berkeley, Gloucestershire, at the ripe age of 79, was one of the best known musical critics in this country. He was connected with *The Daily Telegraph* from 1870 to 1905, and during the first half of that long period the cause of Wagner was fought. Mr. Bennett recognized his genius, but was not in sympathy with the form—or, as he thought, formlessness—especially of the later music-dramas; and, as all who have studied this period are aware, that opinion was then held by the majority of critics. Bennett's sincerity,

however, was never called in question. After all, there have always been Bennetts—men whose reverence for the masters of the past prevented them from rendering full justice to coming masters.

ONE of Mr. Bennett's great merits was his encouragement of native art. Many composers—Dr. F. H. Cowen, Sir Alexander Mackenzie, Sir Hubert Parry, Sir Charles Stanford, and others—owe much to the prominent notices he gave of their works. He provided libretti especially for the first two, but also for other musicians.

UP to 1865 Mr. Bennett was a schoolmaster, although also engaged as organist of various chapels. For three years (1855-7) he was master of the school attached to Dr. Allon's Union Chapel at Islington, of which chapel, by the way, Prout, our former critic, was for many years organist. Mr. Bennett published his reminiscences under the title 'Forty Years of Music,' reviewed in these columns on November 14th, 1908.

MISS LEILA DOUBLEDAY, an Australian by birth, who studied at Melbourne, and afterwards under Prof. Rosé at Vienna, gave an orchestral concert at Queen's Hall yesterday week. She played the Max Bruch Violin Concerto in G minor with good technique, taste, and refinement, and, as she is still in her teens, promises well both as a player and an artist. Her tone was not very full, but nervousness may have been to some extent the cause.

THE IMPERIAL RUSSIAN BALLET will make its first appearance in England at Covent Garden next Wednesday in 'Le Pavillon d'Armide,' a Ballet Fantastique, music by Tchernepnin.

THE death is announced of John Severin Svensden, the Norwegian composer. He was born at Christiania in 1840, and was for a time a bandmaster, but at twenty-three went and studied at the Leipsic Conservatorium. After that he travelled a good deal. He visited London in 1878, when his Quartet, Quintet, and Octet, all for strings, were performed; and again in 1888, when he conducted his Symphony in D at a Philharmonic Concert. His music is clever, refined, and characteristic.

PERFORMANCES NEXT WEEK.

SUN.	Special Concert, 3.30, Albert Hall.
—	National Sunday League Concert, 7, Palladium.
MON.—WED.	and SAT. Royal Italian Opera, Covent Garden.
MON.	Miss Irene St. Clair's Vocal Recital, 3, Aeolian Hall.
—	Mr. Robert Lortat's Pianoforte Recital, 3.15, Bechstein Hall.
—	Cherniavski Trio and Miss Alice Tristram's Concert, 8, Aeolian Hall.
—	Max Paier's Pianoforte Recital, 8, Bechstein Hall.
—	Coronation Concert, 8.15, Steinway Hall.
TUES.	Madame Balthy and M. Henri Leon's Concert, 3, Bechstein Hall.
—	Miss Maggie Teyte's Vocal Recital, 3.15, Aeolian Hall.
—	London String Quartet Chamber Concert, 8, Bechstein Hall.
—	Mr. J. O'Connell McInnes's Song Recital, 8.45, Aeolian Hall.
WED.	Mr. René Bohet's Violin Recital, 3, Bechstein Hall.
SAT.	Mischa Elman's Recital, 3, Bechstein Hall.
—	Mr. Felix Salmond's Cello Recital, 3, Bechstein Hall.

DRAMA

THE WEEK.

COMEDY.—*The Crucible: a Play in Three Acts.* By Edward G. Hemmerde and Francis Neilson.

THE promptings of charity suggest that 'The Crucible' must be an earlier work of its authors than 'The Butterfly on the Wheel'; otherwise it is hard to explain, except as the result of a happy fluke or inspiration, the immense superiority of

the piece now being played at the Globe. That play has not a great deal of merit apart from its big act; three-quarters of its material is conventional enough; but the trial scene at any rate can be unreservedly commended, because there technical knowledge is skilfully used to produce an effect of drama that is wholly legitimate as well as exciting. Alas! there is no such redeeming trait in 'The Crucible.' Here the collaborators seem to have relied on their reminiscences of current plays and stock types, stage legends as to the morality and manners of the "smart set," and their own flights of fancy. The result would have been poor enough had they shown as much stage craft and regard for colloquial speech as heretofore; but this time they employ the most ingenuous devices for getting their characters on and off the stage, they display a singular awkwardness in expounding their plot, and they put at times into the mouths of their hero and heroine rhetoric so high-flown that it is difficult to restrain a smile.

Once more the plutocrat of humble origin and iron will is forced to do duty as protagonist, yet we are told next to nothing of his business; are in the dark as to his relations with his right-hand man, clerk or partner, whichever he is; and are to suppose, in these days when rank runs after wealth, that the millionaire feels crushed in the presence of high-born people, and has had trouble in making good his social footing. Once more, as in 'The Walls of Jericho' and kindred plays, we see thrown into the company of this rich plebeian a girl of refinement and breeding, and all we learn about her is that she is extravagant in dress, and heavily in debt to a male acquaintance, till she suddenly makes the startling announcement that her desire is to be a mother of men—men who will do great things in the world, &c. The plot is rather like a modern version of 'Measure for Measure.' Mary Shrawardine is placed in somewhat of the position of Isabella. Her brother, on the strength of a letter of introduction which does not give the name of the bearer, calmly asks Mark Melstrode the millionaire for the loan of 20,000l.; unless he obtains it at once, he must either take his life or go to prison. Melstrode, whose opinion of the lady he loves is so low that he suspects her to be maintained by her creditor, decides that he can now test Mary's virtue; so he suggests that she shall be not his wife, but his mistress. If, rather than sacrifice her honour, she lets her brother face the penalties of the law, then and not till then, he argues, will he believe her spotless. She persists in rejecting his proposal; he helps the boy; and the play ends with Mary's exposition of her maternal ambitions.

Unsatisfactory as a picture of high finance or high society, the play is not melodramatically impressive. The authors bungle what might have been strong situations, and break up into two acts what should have been one. Capable players such as Mr. Beveridge and Mrs. Russ Whytal try to put

individuality into the thinnest of parts. Miss Mary Rorke gives a charming sketch of a dowager of the old school, and Mr. Owen Nares has some fine moments of emotion as Mary's distracted brother. Mr. Ainley works hard to convey an impression of a strong man, and Miss Evelyn D'Alroy rather underplays the heroine's scenes in the wish to be natural. But no amount of clever acting could get over the fact that 'The Crucible' is an unsatisfactory piece of work.

THE 'AGAMEMNON' AT BRADFIELD.

ONCE more the Bradfield boys have given the 'Agamemnon' in their picturesque Greek theatre, and, if the performance brought out no actor of remarkable gifts, at least it compared favourably with the efforts of former years. The rehearsals had been unusually prolonged, as the play was postponed from last year on account of King Edward's death. To the over-familiarity of much practice may be due the tendency of one or two players to rattle through their parts. Even the greatest have no immunity from this failing. One remembers how Coquelin galloped 'Cyrano' in the later days of the piece, and how the characterization suffered thereby.

Apart from this, the Bradfield 'Agamemnon' was altogether successful, and both actors and he who "taught the piece" were justified of their toil. It is no small triumph to interpret Æschylus in such a way as to hold a modern audience spell-bound for two hours. The feat is more considerable when the play is the 'Agamemnon,' where the dramatic effect depends, for its last subtleties, on ironies of phrase rather than on incident. As an acting play in the modern sense, the Bradfield boys' 'Agamemnon' is far less powerful than their 'Alcestis,' which remains one of our most cherished memories; but in view of the "limitations" of Æschylus (the phrase is used reverently) under present-day conditions, the mere stage-effects had enough of drama to carry conviction to the hearers. As in 1900, the Choral Odes were set to music written in the modern scale, and this concession to the ear is also a help. The simplicity of the melodies and the elementary harmonies had sufficient suggestion of the antique to save anachronism. One recalls, with less pleasure, a former experiment in strict ancient modes. Nowadays it is perhaps well to use full harmonies boldly. Sir Hubert Parry's setting of 'The Birds' at Cambridge seemed to add a new beauty to the verse of Aristophanes, particularly in the Parabasis; but the aim of Bradfield College is to carry us back to the theatre of Dionysus as literally as possible, and we must therefore be content with artless song, lightly supported on the murmur of lyres and the low breathing of flutes. It is certainly very pleasant to hear on a warm summer afternoon.

One doubted at times the fitness of certain pieces of action on the part of the Chorus, but "the knee pressed in the dust" was a good foot-note in pantomime. We liked less the "oarage of wings." The final arrest of the Chorus was frankly an error of stage-management, and some of the young old gentlemen of Argos doddered too much. Of the actors, who did well one and all, the chief honours lay with D. W. Ll. Jones, as Cassandra. His passion was very real.

As usual, the play has been translated into English verse by the Sixth Form. We are now familiar with these Bradfield

versions, which frequently show promise. But this year we saw something that looked like real accomplishment in the passages signed K. L. F. Armitage. Closer examination of Mr. Armitage's work brought no disappointment. He knows how to transmute his Æschylus into poetical English form, without licence and without stiffness. His renderings of *ἔστιν θάλασσα* and of *τίπτει μοι τόδ' ἐμπέδως* would bear quotation, did space permit. Mr. Armitage has now gone to Oriel College, and is likely to adorn the poetical laurels of that Society. In the translation generally one hoped for chance new lights on old difficulties, but that was perhaps asking too much. Even the play on the word "Helen" has not moved young wit to supersede Browning's pun.

J. D. S.

Dramatic Gossip.

THE Irish players, who have begun their annual season at the Court, presented last week a couple of new dramas which had some interesting features. Both have the merit of marked local colour, and work out an idea of some moment with care and sincerity; both contain sketches of character which give the impression of being strikingly true, as well as dialogue that has the stamp of naturalness; both end tragically, though only in one case does the tragedy come as more or less of a foregone conclusion.

ONE of the plays is Mr. St. John Irvine's 'Mixed Marriage,' in which the scene is a lower middle class household in a street of Belfast, and the theme a young Protestant's desire to take a Catholic girl to wife. His father, the most reasonable of men in all other ways, but harsh and bigoted in matters of faith, strongly opposes the boy's proposal, is all for turning him out of doors, and threatens him with a father's curse in this world, and hell in the life to come. On one side—and this side is emphasized by the hero's younger brother, who complains of always being suppressed at home—Mr. Irvine's work illustrates the conflict of age and youth. On the other, it illustrates only too realistically the violence of religious prejudice and militant faction in the north of Ireland. Against the father, who is a characteristic example of intolerance, is set the engaging figure of his wife, a woman full of common sense and racy humour, who tries hard to keep the peace among her men-folk and preserve an atmosphere of conciliation and sweet temper. One feels that hers ought to be the prevailing influence in a play that lingers long on the level of comedy. But suddenly the note is changed to melodrama: a riot breaks out in the street and the unwelcome young bride rushes out of doors, to be shot dead by a policeman's bullet on the threshold. In this violent way does Mr. Irvine cut the knot of his problem, and, though the piece is admirably interpreted, notably by Miss Maire O'Neill as the sharp-tongued but amiable mother of the family, it cannot be said to have a convincing end.

THE other work, 'Birthright,' written by Mr. T. C. Murray, tells a story as old as that of Esau and Jacob, or even Cain and Abel, though it opens as if it portended a battle between a peasant father and a son of antipathetic temperament. Virtually there are only four characters in this sombre little play—father and mother and their two boys—yet somehow it conveys the idea of being packed with incident, emotion, and drama. Each parent has a favourite. The mother inclines to the elder lad, who is something of

a scholar, loves field sports, and is not too fond of farm-work. Moreover he is sociably inclined, and ready to lift a glass in company. She forgives him his weakness for the sake of his cheery and affectionate moods, and is always resourceful in finding excuses for his absences. His morose father at last disinherits him in favour of the younger son, a boy who is more industrious and reticent. This drudge is even preparing to emigrate to America for a while to re-establish the family fortunes, when the old man insists that his heir shall be banished instead. High words pass between father and son, but it is his brother whom Shane believes to be at the bottom of the plot for his exile. Reproaches are followed by blows which the poor mother cannot check, a fratricidal fight ensues, and soon her darling is killed. The simplicity and directness, the impressiveness of the drama, so ghastly in its climax, cannot be indicated by mere verbal description; nor can words well express the perfect ensemble of acting produced by Mr. Sydney Morgan and Miss O'Doherty as the old people, and Mr. Donovan and Mr. Kerrigan as the brothers. As for the fight, it was almost too horrible in its suggestion of reality.

MR. CYRIL MAUDE will produce on the 29th a comedy of 1805 called 'Pomander Walk,' by Mr. Louis N. Parker.

THE death in his 74th year is announced from Rostock of the well-known dramatist and novelist Adolf Wilbrandt. The son of the Professor of Æsthetics and Literature at Rostock, he had a University education, and devoted some years to journalism before he published the work that first made his name, the biography of Heinrich von Kleist. In 1881 he was appointed Director of the Hofburgtheater in Vienna, where he had taken up his residence for many years, and written some of his best plays. He also wrote a number of novels, among them 'Meister Amor,' 'Die Rotenburger,' 'Hermann Ifinger,' and 'Die Osterinsel'; but it is as a dramatist that his name will be remembered. His best-known pieces are 'Der Meister von Palmyra,' 'Arria und Messalina,' 'Die Tochter des Herrn Fabricius,' and 'Jugendliebe.'

A SELECTED LIST OF

MESSRS. BELL'S

HISTORICAL BOOKS.

WORKS BY DR. J. HOLLAND ROSE.

WILLIAM PITT AND NATIONAL REVIVAL. Medium 8vo, xii-632 pages. Illustrated. 16s. net. [Just published.]

THE LIFE OF NAPOLEON I. Including New Materials from the British Official Records. Fifth Edition. With many Maps and Plans and numerous Illustrations. In 2 vols. large post 8vo, 18s. net. Also a Cheaper Edition, without the Illustrations, 2 vols. 10s. net.

NAPOLEONIC STUDIES. Second Edition, Revised. Post 8vo, 5s. net.

THE HANOVERIAN QUEENS OF ENGLAND. By ALICE DRAYTON GREEN WOOD. With Portrait and Map. 2 vols. 8vo, 10s. 6d. net each.

Vol. I. (now ready). SOPHIA DOROTHEA (wife of George I.) and CAROLINE OF ANSBACH (Queen of George II.). Vol. II. (in preparation).

HISTORY OF THE POPES. Their Church and State, and especially of their Conflicts with Protestantism in the Sixteenth and Seventeenth Centuries. Mrs. FOSTER'S Translation. Revised by G. R. DENNIS, B.A. With 3 Portraits. 3 vols. 3s. 6d. each. [Bohn's Standard Library.]

Also a Thin Paper Pocket Edition, 3 vols. cloth, 2s. net; or leather, 3s. net each.

HISTORY OF THE LATIN AND TEUTONIC NATIONS (1494-1514). By LEOPOLD VON RANKE. A Revised Translation by G. R. DENNIS, B.A. With an Introduction by EDWARD ARMSTRONG, M.A. Crown 8vo, 6s. net.

A LADY OF THE OLD RÉGIME. By ERNEST F. HENDERSON, M.A. Ph.D. With numerous Illustrations. 8vo, 10s. net.

An account of Elizabeth Charlotte, daughter of the Elector Charles Louis and granddaughter of the Winter King. She married the Duke of Orleans, brother of Louis XIV.

THE FOUNDATIONS OF MODERN EUROPE. Twelve Lectures delivered in the University of London, by EMIL REICH, Doctor Juris. Post 8vo, 5s. net.

THE ROMAN JOURNALS OF FERDINAND GREGOROVIVUS (1852-1874). Edited by FRIEDRICH ALTHAUS, and Translated from the Second German Edition by Mrs. GUSTAVUS W. HAMILTON. 3s. 6d. [Bohn's Standard Library.]

WORKS BY THE RIGHT REV. ABBOT GASQUET, D.D. O.S.B.

HENRY III. AND THE CHURCH. A Study of his Ecclesiastical Policy, and of the Relations between England and Rome. Demy 8vo, 12s. net.

HENRY VIII. AND THE ENGLISH MONASTERIES. Sixth and Cheaper Edition, with new Preface. Demy 8vo, 8s. 6d. net.

THE EYE OF THE REFORMATION. Studies in the Religious Life and Thought of the English People in the Period preceding the Rejection of the Roman Jurisdiction. Fourth Edition. Crown 8vo, 6s. net.

LITERATURE

Some Problems of Philosophy: a Beginning of an Introduction to Philosophy. By William James. (Longmans & Co.)

As William James speaks to us in this unfinished sketch—for we have it on his own authority that it is "fragmentary and unrevised"—we listen to the accustomed voice, vibrant as ever, with its force and freshness and lyric passion in no wise impaired or abated, until suddenly there is a break in the music, and silence. Not otherwise should the philosopher cease, the body failing, not the mind. Better if Plato had not survived to write the 'Laws.'

Here, then, we are brought into intimate relation with the mind of William James as it pursued, always tentatively, yet with increasing sense of definite direction, its latest interest, namely, metaphysics: "I propose in this book to take philosophy in the narrow sense of metaphysics, and to let both religion and the results of the sciences alone."

Now there are those who would say that precisely in the field of metaphysics James, with all his genius, was bound to fail. Religion and science, notably psychological science, they would admit, are subjects out of which he had again and again struck fire, as notably in 'The Varieties of Religious Experience' and 'The Principles of Psychology.' But they profess themselves incapable of imagining the philosophic experiments of James ever taking shape in a metaphysical system. And so far as they dis-

believe in James as a system-builder, they are right. They are profoundly wrong, however, if they can find no room in the class of metaphysicians for another type of thinker. James is an empiricist. As he says of himself, "the author of this volume is weakly endowed on the rationalist side." Not for him are those triumphs of conceptual architecture, all purporting alike to represent the structure of the eternal truth of things, yet each so manifestly different from the rest. Finality is foreign to his philosophic disposition. He builds on such facts as lie within his reach, and is willing to be sceptical about any conclusions reached by his pragmatic method in a given time. He aims in no sense at completeness, but at most is concerned to be accurate in details:—

"The serious work of metaphysics is done over the separate single questions. If these should get cleared up, talk of metaphysics as a unified science might properly begin. This book proposes to handle only a few separate problems, leaving others untouched."

We start with the most difficult problem of all—the problem of Being. Why is there anything at all? James has a short way with the "mystery of fact." He accepts it. What is more, he accepts it at its face value. The ordinary, one might almost say orthodox, view that "the waxing and waning of our phenomenal experiences must be treated as surface appearances which leave the deeps untouched," which mask a real reality that is always the same, is thrust aside as a pious prejudice. Fact or Being, as it actually occurs, is shown to be, so far at any rate as our intellect is concerned, a matter of chance. The conditions of its appearance are uncertain, being unforeseeable when future, and when past elusive. Phenomena come and go. There are novelties; there are losses. The world makes itself somehow—that is the brute fact. James concludes that our business is far more with its What? than with its Whence? or Why?

Thus we pass on to the problem of the connexion between what for James are the two fundamental constituents of Being, namely, things and thoughts, or, as he generally prefers to call them, percepts and concepts. Does the whole import of the world of concepts lie in its relation to perceptual experience, or is it also an independent revelation of reality? Going back to psychological origins, he finds that thought proper must have had at first an exclusively practical use. Its function was, by conceptual translation of the perceptual flux, and consequent widening of the mental panorama, to promote the handling of it by meeting it at some more or less distant point ahead of the present. All thought of an advanced kind, it is thereupon contended, is but a further prolongation of this perspective of practical consequences. The map of relations is made in order to enable us to steer. It is freely admitted, however, that the map, once made, is a delight for its own sake and, further, that it deepens

the values of life by the very eternalization which it lends, or seems to lend, to the process of our passing adjustments. A higher order—a mathematical scheme of the world—comes within our ken, and a new loyalty becomes possible in regard to it—a loyalty towards the ideal.

Yet there is such a thing as the abuse of concepts. To take it as the better part to understand life, without entering its turmoil—to take refuge, like Plato's philosopher, under the lee of the wall, and watch the crowd drift along, caught in the work-a-day welter of onrushing life—is both vanity of mind and cowardice of heart. There is a sort of understanding to be got by way of concepts; yet, since they omit, being abstract, they likewise to that extent falsify. There is a fuller understanding that only concrete life—only the flux itself—can yield:—

"Conceptual knowledge is forever inadequate to the fulness of the reality to be known. Reality consists of existential particulars as well as of essences and universals and class-names, and of existential particulars we become aware only in the perceptual flux. The flux can never be superseded. We must carry it with us to the bitter end of our cognitive business, keeping it in the midst of the translation even when the latter proves illuminating, and falling back on it alone when the translation gives out. 'The insuperability of sensation' would be a short expression of my thesis."

The proof to which James trusts for the validation of this thesis is precisely that endless series of paradoxes which result from taking your concepts seriously, and then, with their aid, making nonsense of all that is given in perceptual experience—whether it be motion, change, and resemblance in outer nature, or knowledge, judgment, and personal identity itself in the inner life. In short, the inadequacy of conceptualism is, for James, established by a *reductio ad Bradley*. As regards the stock objection of the "intellectualists," that it is self-contradictory to use concepts to undermine the credit of conception in general, James's reply is that "the best way to show that a knife will not cut is to try to cut with it."

So far the argument has proceeded mainly on negative or critical lines, such as have been in recent years pursued by various philosophers, some of whom own no formal allegiance to "the pragmatic rule," the most conspicuous of these being M. Bergson. We reach the more constructive side of James's philosophy when pluralism is defended as against the monism which provides a sort of cosmic solvent that melts away all finite individuality as so much illusion. Pluralism is asserted to have certain great advantages. Thus, it is more scientific, since it ties down oneness to the meaning of a universe of discourse, a connexion amongst things which does not exclude the possibility of their being different from another point of view and in another way. Pluralism, in short, finds room for every kind of unity except the sort which is transcendent and indescribable, whereas

monism has to deny the reality of any disconnectedness whatsoever. Again, it agrees better with the moral and dramatic expressiveness of life—with tryings and clashings, with work done and things decided here and now; whereas the natural affinity of monism is with a quietism of the religious type—a faith that “sees the All-Good in the All-Real,” and glories in a world that was unconditionally saved before ever it could sin.

Apart from this test of abstract preferability, a concrete and “pragmatic” criterion of the truth of pluralism is proposed in the fact that it can explain novelty, whilst monism is impotent to do so. Evolution is the constant budding-out of new reality. This is nowhere more manifest than in the realm of our own subjective experience, which no amount of conceptual sophistication can lead the man of common sense to regard as a mere redistribution of the unchanged atoms of some primal fire-dust or corresponding mind-dust.

The rest of the work is concerned with the upholding of the reality of novelty as against “logical” difficulties connected with the infinite, or, again, with causation. The suggestion is that we may witness in our own personal experience, especially when it is at its most free and creative, the essential process of cosmic creation. Thus from first to last James remains true to his resolve to take Being at its face-value as perceptual experience, and explain its What? by following the analogies that it directly suggests.

The book ends with the syllabus of an introductory course of philosophy, in which James’s whole position is admirably summed up. His is a “melioristic” universe. It is conceived after a social analogy, as a pluralism of independent powers. It will succeed just in proportion as we work together for its success. “If none work, it will assuredly fail. If each does its best, it will not fail.” Thus its destiny hangs on an *if*. Individually we take risks, for the other factors must do their share. At least, however, we can meet the world half way by trusting the other powers to do their best; and in the mean time must do our best, in spite of the *if*.

To face facts, and be brave and loyal—such is the philosophy of William James in epitome. And, if ever a man lived his philosophy, it was he.

The Family and Heirs of Sir Francis Drake. By Lady Elliott-Drake. 2 vols. (Smith, Elder & Co.)

THIS is a book to rejoice the heart of every Devonian. The men, and not less the women, of Devon have reason to thank God for giving them “a guid conceit of themselves,” and Lady Elliott-Drake evidently shares the traditional pride of the county. Indeed, the general reader who has not the luck to be of the West

Country may consider that there is a superfluity of insignificant detail in these two sumptuous volumes. But to the true Devonian there can be “nothing common or unclean” in the family history of his county, and accordingly we find here a minute account of the doings and interests, the expenditure, allowances, wills, and inheritances, not only of the Drakes, but also of the families connected with them, and sometimes even of those who merely enjoyed the happy fate of bordering upon Drake lands. The book is full of information about the Bamfields, Pollexfens, Strodes, Pymys, Bullers, Carews, Grenvilles, Chudleighs, Fitzes of Fitzford, Fortescues, Crymes, and a number of other West-Country folk of ancient degree, and Prince’s ‘Worthies of Devon’ has found an appreciative commentator who adds much to his records. It is true that some of the materials for the Drake family history, and notably the very interesting ‘Memoranda’ of Lady Drake, *tempore Gul. et Mar.*, were privately printed some years ago by the Rev. William Harvey, a descendant of one branch of the family; but Lady Elliott-Drake has added an immense amount of new matter from private correspondence and from State papers and the Reports of the Historical MSS. Commission. The result is a family history of singular completeness, admirably written, despite a tendency to diffuseness and divagation, and rather too much of the political history of the times. It possesses the charm which always belongs to a picture of local life, lived with distinction and refinement, in a state of society widely different from that of the present day.

That the life of the Drakes was essentially local seems curiously paradoxical when it is recalled that the one great Drake of history was the circumnavigator of the globe. It is true that two of his successors—he had no descendants—were admirals of some note, but they were the exceptions. It is also true that many Drakes were members of Parliament, for comfortable pocket boroughs as a rule, supporting first the Parliament and their kinsman Pym, and afterwards staunch to Whig interests and the Protestant succession. But there is little recorded of their life in London or in the wars, and the part they played in politics was usually subordinate to a Strode or some other Devonian leader, and it is evident that their hearts were in the country, in their homes at Buckland Abbey, Nutwell Court, or Meavy High House. The Drakes, in fact, were essentially country gentlemen ever since the name appears at Tiverton in the reign of Henry III.

The first of the branch which gloried in the production of Sir Francis was Simon Drake of Nutwell Court, who held of the Abbot of St. Rumon’s, and died in 1534. According to the pedigree given by Lady Elliott-Drake, this Simon’s brother was the great-grandfather of the famous admiral; but, as Sir Francis was born in 1542–3, it seems difficult to squeeze

in the intervening generations, unless Simon’s brother was very much his elder. The early ancestors of the Drakes appear to need further research, and we may add that, when the family historian deals with questions of tenure by knight service and the like, it is somewhat rash to rely upon Coke and other ancient authorities without consulting the researches of Prof. Maitland and Mr. J. H. Round. However, Lady Elliott-Drake is not inaccurate in the main; her notes on feudal tenures will be new to some readers; and the account she gives of the heavy drain upon landed inheritors caused by the exactions of the Court of Wards and Liveries shows that the present Chancellor of the Exchequer is not original in his raid upon territorial “henroosts.”

Of Sir Francis Drake himself we have little in these volumes: the author rightly decided that his life had already been sufficiently written. But we must not forget to thank her for reproducing Isaak Oliver’s delightful miniature of the great captain, which seems a living likeness, in curious contrast with the stiff portrait which serves as a frontispiece. Besides this, a very interesting document relating to him is here printed for the first time. It is a translation of a letter from Don Francisco de Zarate, the owner and commander of a Spanish ship from which Drake “took a falcon of gold with a great emerald in the breast thereof,” as Hakluyt records. Don Francisco describes his captor, who let him off very lightly:—

“This English General is a cousin of John Hawkins; he is the same who about five years ago took the port of Nombre de Dios; he is called Francis Drake; a man of some five-and-thirty years, small of stature and red-bearded, one of the greatest sailors on the sea, both from skill and power of commanding. His ship carried about 400 tons, is swift of sail, and of a hundred men, all skilled and in their prime, and all as much experienced in warfare as if they were old soldiers of Italy. Each one in particular takes great pains to keep his arms clean; he treats them with affection, and they treat him with respect; he brings with him nine or ten gentlemen, the younger sons of English noblemen. These are his council, and he calls them on every occasion, however unimportant; he is not bound by their advice, but hears what they have to say, and afterwards gives his orders; he has no favourite. These of whom I speak sit at his table....His service is of silver, richly gilded and marked with his arms; he brings all the luxuries and perfumes possible; many of them, he said, were given him by the Queen....He dines and sups to the music of violins....I believe that all the crew received wages, for when our vessel was plundered, none dared take anything without his leave; he was very gracious to them, but punished the smallest fault....I endeavoured to find out whether the General was liked, and every one told me he was adored.”

The original of this letter to the Viceroy of New Spain was discovered among the documents at Simancas, like the two papers printed in the Appendix, in

Spanish and in English translation, and now preserved in the Archivo General de Indias at Seville. The first of these is an account of Drake's voyage to the South Seas by the Straits of Magellan in 1577, written by his nephew Capt. John Drake at Santa Fé in 1584; the other is John Drake's deposition before the Holy Office at Los Reyes in 1587—a valuable document for the history of the family. Both were well worth printing.

The kinsmen who inherited Sir Francis Drake's lands and the lands of his collaterals did nothing very remarkable. Some were fine specimens of the country gentleman of former days, others were much the reverse, as even loyal Lady Elliott-Drake frankly admits. They were too apt to go to law and fight over their lands and fishing rights and what-not, and they made curious complicated wills, and dealt rather stingily sometimes with charges and portions. But they were not a rich family, and the Civil War was a disastrous drain upon their resources. It is not so much in their personalities as in their local life that the interest of these volumes consists, and it was the more worth recording since that kind of life is utterly vanished. As Lady Elliott-Drake says, commenting on a list of the householders of the parish of Yarcombe nearly three hundred years ago,

"Men of the same names are farmers there now. It is not the yeomen, but the class above, that has disappeared.... The same change may be observed in almost every part of Devonshire.... The sixteenth and seventeenth century owners of these places were not wealthy people; their homes were not pretentious, but they were well and solidly built, and had for the most part handsome entrances and square-headed mullion windows of dressed granite or Ham Hill stone.... Most of these old houses are snugly tucked under the shelter of a wooded hill, but although they rarely command an extensive view—for that was the last thing their builders thought of, water and a 'lew-place' being the chief considerations in selecting a site for a residence—there is a picturesque charm about them and the quiet dignity of perfect appropriateness which we miss in modern buildings of the same class. A great many, altered and spoilt, are now farmhouses; but some, such as Sheafhayne, remain much in their ancient condition, and, by showing us what the homes of the lesser country gentry were like, give us an idea of their way of living. Younger sons of good families settled down on these small bartons, farmed their own lands, married their sons and daughters to their near neighbours, and carefully recorded their coat-armour and alliances every time the Heralds made their visitation."

One of the most charming features of these volumes is the way in which delightful pictures in words are introduced: we could wish for more illustrations like that of Buckland Abbey—of the country houses and bartons of the Devonshire squires. The author knows them all, and describes their beauty and their peculiarities, and also, alas! their disfigurements and "restorations," with the deep sympathy of a true lover of old houses.

Among the excellent illustrations are portraits of six Drakes and an equal number of wives, who, we realize, were wooed for other and possibly higher reasons than physical attractions. Dorothea Bamfield, the wife of the third baronet, has a strangely "haunting" face, however; and if the other Dorothea, daughter of John Pym, has not the same spiritual look, she is clearly her father's own daughter. The full Index has been carefully prepared.

The Religious Experience of the Roman People from the Earliest Times to the Age of Augustus. By W. Warde Fowler. (Macmillan & Co.)

IF Lord Gifford had gained no other fruit from his bequest than the present course of lectures, the admirable volume before us should suffice to satisfy his *Manes*. For here we have a study which must rank as the best that has been produced on Roman religion for many years, and one which can only be superseded by the discovery of new materials. There are, of course, many problematical judgments, which may or may not be verified by future discoveries; but even here Mr. Warde Fowler contrasts most favourably with the majority of those to whom he makes generous acknowledgments, in that he does not despise logic, and does not give us a series of guesses for a series of arguments. From this vice of the folklorists he is remarkably free. His style, too, is clear, and often eloquent, especially in his beautiful chapter on Virgil, whose supreme position among the Roman poets he justly maintains. We say this in view of some Latin scholars who would place their Roman Burns higher than their Roman Milton. Nevertheless, in the midst of this high writing on high topics, we come occasionally upon colloquial phrases, which seem out of place. We need only cite "leave them for good" (i.e., finally), a study is admirably staffed (provided with a staff), "if they come by the chance." "Birds and other animals" is perhaps defensible, though odd; and the frequent use of the word "glint" does not please us in sober prose writing. To these trifles we will add the complaint that Mr. Fowler has not given his references and illustrations (which are not voluminous) as foot-notes, but in an appendix to each chapter, so that we must turn back and forward to find each reference. It is not easy to invent a simpler and yet more effective device to annoy a serious reader, and we trust it will be abandoned in the next edition of the book.

Let us now seek to penetrate deeper into the author's great subject and his treatment of it. He is at pains to trace the earliest growth of Roman religion from the magic and the fetish worship of primitive man, and this must be done, not by the light of any clear evidence, but by inferences from the mental con-

dition of modern savages, and from the survivals which are to be found in the Roman religion of history. The various will-o'-the-wisps which flicker over the great swamp of facts collected as folklore have not misled him, but we think he has perhaps drawn the distinction between magic and religion too definitely, though he has not failed to tell us that the one is a sort of protoplasm of the other. Irrational magic or incantation survives in the most advanced creeds. Nor are we quite satisfied with his carefully worded definition of religion as "the effective desire to be in right relations with the Power manifesting itself in the Universe." There is religion in human beings in whom the conception of the Universe is not yet born, and also among those who have not yet recognized the unseen Power to be one. The definition can of course be corrected verbally to meet these objections. But there is to us a graver defect—that Mr. Fowler has not considered the passage from magic to religion as determined by the change in the object of propitiation. The unseen Power that frightens the savage, and gives rise to magical rites, is almost always a malevolent Power; it is, however, not beyond the control of human forces; the savage hopes to coerce this malevolent spirit, by putting on him certain bonds and shackles which the medicine-man provides. Moreover, this spirit is regarded as only local, not as inhabiting the whole world, still less the Universe. But with the advance of man the conception of this unseen Power becomes purified. Its strength is such that coercion by man is out of the question, and with this approach to omnipotence, its malevolence falls into the background, and the idea of a God, partially at least benevolent, and to be propitiated only by sacrifice and other devotion, takes its place. Wherever this change has taken place, we have religion instead of magic.

Not that the attribute of benevolence becomes necessary to the God of a religion among men. The Deity of the Calvinist Puritans, three centuries ago, in Europe and America might be regarded not only as a malevolent, but even as a malignant Being, for with absolute power and foreknowledge He creates millions of men for His own glory, and condemns the great majority of them to eternal tortures for manifesting the imperfections with which He had deliberately shackled them. Still, even in that terrible creed there was not a little said about the justice and mercy of God, nor could His predestination of man's fate be coerced by magic, or even propitiated by sacrifice. In this way, to speak generally, it is owing to the variation in the concept formed of the unseen Powers that we may expect to find the variations in primitive creeds.

We are thus led, by natural transition, to speak of another factor in the Roman religion, to which Mr. Warde Fowler has devoted no attention. The word *gravitas*, as expressing the most remarkable feature in the character of that race, occurs only

once, we think, in his whole book. Nevertheless this dominant quality must have stood in close relation to Roman religion, even if that religion was not moral in the sense that modern creeds are. The Roman patrician went about his home, and also throughout the Greek world, much as the English gentleman did in the early part of the last century. He was a superior animal, both in his wealth and his appointments, also in the staid, sober way of his life, his calmness, his dislike of fuss and ostentation—above all, in his hatred of displaying emotion. The Roman *gravitas* seems to us similar, but more exaggerated, since Cicero wonders at a great Scipio unbending to play with his friends at throwing shells and pebbles for sport on the shore at his country villa. So foreign was it to the Greeks that when Aristotle tries to paint for us the “grandee” in his ‘Ethics,’ this “high-souled” person is no more than a very pompous prig. We have reason to think that it also distinguished the Roman from the other races in Italy. The Sabines and Latins may have shared in it, but not the more distant neighbours of Rome. It was a quality far too deep and solid to have been developed by empire—nay, rather, empire soon marred and spoilt it. We put it to Mr. Fowler to let us know in what relation this *gravitas* stood to the peculiar character of the Roman creed. Are they cause and effect? and if so, which is the cause? It seems hardly possible that they can be collateral and concomitant, without acting and reacting perpetually.

This distinctive quality of *gravitas* seems to us elsewhere of great help in explaining what our author justly feels to be a great difficulty. How could a personage like Augustus—not a revival preacher or a missionary, but a calm politician—possibly impose on his people a restoration of their ancient faith? It had been invaded by Greek scepticism, Oriental mysticism, strange and attractive cults that afforded variety and excitement; it had been attacked by the poets, undermined by the philosophers; it was torn to shreds, yet the efforts of Augustus rehabilitated it for a couple of centuries. This our author has taken pains to establish. He justly gives to Virgil a great part in promoting the revival, though Horace appears as the poet laureate of the festival which inaugurated the reform. But would Virgil or Augustus or any one else ever have succeeded in turning back the hands of the clock, had there not been in respectable Roman society a great fund of that *gravitas*, that seriousness of life, which gave its weighty support to the movement? We conceive that, as there are at present in the English aristocracy a large number of serious men and women, of the kind that make no fuss, nor even proclaim their disgust at the conduct of the objectionable members of their class, so there was at Rome a large body of serious opinion which hailed the revival as the only possible salvation from national ruin. In like manner the Evangelical movement of the early nine-

teenth century in England routed the fashionable Deism or infidelity of the eighteenth, and restored a society that seemed to have abandoned its faith to a new and better life based on the old Gospel.

In addition to the noble chapters on Virgil, we are much taken with the author's preference of Livy as an historian to Polybius. From his point of view, he is certainly right; for Livy felt a deep interest in the religious phenomena of Roman history, whereas Polybius regarded such things as the mere devices of statesmen to manage the vulgar. The former is the truer attitude for an historian, and supplies explanations where selfish interests are not the real cause of a nation's virtues or defects.

Not only is Mr. Warde Fowler most learned in the literature of his subject, but also he quotes too many opinions of other authors in their words, which he could have expressed more harmoniously in his own. We may suggest to him that in speaking of those who have gilded Epicureanism with decency and refined taste, he should have mentioned Pater and his ‘Marius.’ Writing on Cicero and the Greeks he shows no knowledge of Prof. Mahaffy's chapter on that subject in his ‘Greeks under Roman Sway.’ Both these books would have added flavour to his learning, and afforded him some colour in his solid and careful contribution to Roman history.

The Letters and Journal (1848-49) of Count Charles Leiningen-Westerburg. Edited, with an Introduction, by Henry Marczali. (Duckworth & Co.)

THE publication of Count Leiningen's literary remains has raised a good deal of controversy in Austria-Hungary, recalling as they do the fierce passions of the Revolution of 1848. Excellently translated into English by Mr. Yolland, Professor of English Literature in the University of Budapest, they deserve to be widely read in this country, though their human interest will inevitably be found to be more powerful than their political. Written for the most part in prison and under the shadow of the scaffold, they carry with them the compelling appeal of the memoirs of Madame Roland and other victims of the Terror. Brief entries in Leiningen's journal record his hopes and fears, his indignation against fate, and his resignation to the decrees of Providence. His letters of farewell to his wife and relatives are so touching in the simplicity of their honour that it is impossible to peruse them without emotion.

But Leiningen's ‘Letters and Journal’ deserve attention in other respects than their appeal to primitive sentiment. His position on the outbreak of the Revolution was unusually difficult, even for an inhabitant of Eastern Europe with its ragout of races. He was a German by birth, and his aspirations were German.

Though he was not clear whether Austria or Prussia would take the lead, he wrote to his wife: “If monarchic principles obtain the upper hand at the popular assembly at Frankfort, my beloved fatherland can hope for a fulfilment of all its demands.” Yet he had married a Magyar; his wife's estates were in Hungary; and when the crisis came, he threw in his lot with the Hungarian cause, though his brother and cousin were fighting in the Austrian ranks. Even so, as an aristocrat and moderate reformer, he had little sympathy with that cause in the republican and cosmopolitan shape it assumed under the guidance of Kossuth. His contempt for the “noise-makers” at Pest, his distrust of Kossuth, “a great party leader, but no great statesman,” and “a proletarian,” were pronounced. Thus it was Leiningen's fate to take up arms against an Emperor to whom he was devotedly attached, and to die a martyr for beliefs which he did not entertain to the full.

At the outset we find Leiningen loyally accepting the abolition of the feudal duties, though conscious of the economic difficulties that were sure to follow overhasty emancipation:—

“From a distance, equality, popular representation, and franchise, on the broadest possible basis, look very specious indeed; but a nearer view of the elements which have suddenly emerged from a state of absolute dependence and even bondage into the possession of the fullest personal and political freedom, must fill us with the most serious misgivings. Here at Beece there is no doubt that the peasants will reap no advantage from their liberation, for, when there is no one to force them to work, their innate idleness and indolence will lead them to fall a prey to speculation. The landowners, on the other hand, are in the greatest dilemma owing to the haste with which the reforms are being carried out.”

When hostilities broke out Leiningen offered his services to Mészáros, the Hungarian War Minister, and asked to be sent to the army fighting against the Rascians or Serbs, who had seized the opportunity to pay off old scores against the Magyars. He had actually to learn the Hungarian words of command. The Government at first regarded him with distrust, and opened his letters. His chivalrous nature revolted, besides, against the horrors of the partisan warfare in which he found himself engaged. His *honvéds* or foot soldiers had no discipline; they looted, and shot prisoners. The enemy committed every kind of treachery. Here is one of the many scenes described by Leiningen's graphic pen:—

“Every day, several carts full of Rascians (mostly women and children) approach our outposts; and the miserable wretches beg and pray to be taken prisoners, as to stay in the Rascian camp means starvation. Pale, reduced to mere skeletons, they ask the soldiers for a bit of bread, which they devour like so many ravenous wolves. The military commanders offer these poor fugitives refuge; but the civil authorities would exterminate them if they could. Innumerable Rascians have been hanged; three were executed to-day. It is no business of mine

to inquire whether this is the best mode of subjugating them; for my part, the very sight of such measures is revolting."

But Leiningen soon came to appreciate the good qualities of the *honvéds*, and they followed him through the hottest fire. In his excellent Introduction Dr. Marczali, Professor of History in the University of Budapest, becomes ecstatic over Leiningen's descriptions of battles. They are, indeed, uncommonly good; nor does it detract from their literary value that, as his readers will quickly perceive, the affairs were rather disorderly scrambles than organized engagements.

Leiningen succeeds no less with individuals than with the evolutions of war. We get portrait after portrait of Hungarian generals: some, like Vécsey's and Vetter's, mere thumbnail sketches; others, like Damjanich's, elaborated with minute deliberation. His masterpiece is a character of the gallant and ill-fated Görgey, who, from the moment of their meeting, becomes Leiningen's hero of heroes. By that time the Hungarians had to fight not merely the Serb irregulars, but the Austrian army. Leiningen had decided to remain with the troops, partly because he did not wish to be branded as a coward and a renegade, and partly, as he ingenuously confessed, because "in the other camp my reception would not have been a whit more favourable—in fact, several who returned in full penitence to their old colours had been punished by Windischgrätz with all the rigour of the law." At such a juncture it must have been a great relief to meet one who, like himself, was an aristocrat and moderate reformer, and who hated Kossuth, by no means without cause. Leiningen surrendered himself absolutely to the personal magnetism of Görgey, and regarded him with the unstinted admiration bestowed by Thucydides on Nicias. At the end of a brilliant panegyric, occupying one-fifth of the *Journal*, he exclaims:—

"Such was Görgey, with all his virtues and his failings a man, in the best sense of the word, a hero. Such he was to me at least; and though here in prison I daily hear the bitterest charges laid to his door, such will he remain. God grant that even in my last hours, I may be able to bless the 26th of March as my lucky day!"

Dr. Marczali has little difficulty in demonstrating that Görgey's surrender to the Russians at Világos was no act of treachery, though such Kossuth, when safe on Turkish soil, proclaimed it to be. After being persistently superseded and thwarted, Görgey was sent to accomplish impossibilities. Leiningen jotted down brief notes during the heroic but futile campaign against the Austrians and Russians, with such significant entries as—"sad days in Komárom. Quarrels and intrigues. Limbs without a head. Klapka temporarily commander-in-chief; irresolute." The capitulation was to Leiningen the saddest day of his life. As Dr. Marczali points out, Görgey deliberately surrendered to the Russians rather

than the Austrians. The same feeling of military punctilio prompted our officers at Yorktown to salute the French while they ignored the Americans. But the proceedings justified Paskievitch's famous dispatch, "Hungary lies vanquished at the feet of the Czar," and drove the Austrians to stern reprisals. Of the thirteen *honvéd* generals sentenced to death, four were, by special favour, shot; nine, Leiningen among them, were hanged. He might have escaped by Russian connivance, but he declined to desert his comrades.

Leiningen met his fate with piety and fortitude. In prison he read 'Vanity Fair,' and wrote his most interesting *Journal*. At his court-martial he passionately defended himself from the baseless charge of having caused seventeen Austrian officers to be shot after they had been taken prisoners, and repeated his protestations on the scaffold. No drop of bitterness was missing from his cup, since he learnt that his wife's estates had been sequestered. But he begged her to settle all his liabilities, that the honour of his name might be untainted, and resolved to meet his death in the faith of his forefathers—he was a Lutheran—and "with the courage of a Leiningen." It is rather disappointing to find that his "darling Lizzie" was married again—to one of his companions in arms, however.

NEW NOVELS.

Gentleman Roger. By M. E. Francis. (Sands & Co.)

MRS. BLUNDELL has a pretty way of depicting pastoral life as it ought to be; her rustics are almost as idyllic as those of George Sand and the graceful world of operetta; she has also a lively wit, and a sense of atmosphere that is always pleasing and often romantic. Here she tells how a young man of gentle birth, despoiled of his inheritance, goes to work on a Lancashire farm, and falls in love with a Lancashire lass, his master's daughter. The usual obstacles intervene, but the hero's unfailing versatility and high courage, together with the timely assistance of a species of fairy godfather who appears on the scene in the concluding chapter, carry the day. The whole forms an agreeable comedietta which might well have been cast in dramatic mould for a curtain-raiser.

Oliver's Kind Women. By Philip Gibbs. (Herbert & Daniel.)

MR. GIBBS has already proved, particularly in 'The Street of Adventure,' that he possesses considerable gifts for fiction. Ease in narrative, observation, a sense of character, an agreeable touch of humour—all these qualities are displayed in his latest novel, in which the profes-

sional vicissitudes and personal conquests of an ambitious, selfish, commonplace young journalist are chronicled in vivid fashion. Oliver Lumley, the son of a struggling City clerk, who finds adoring women to flatter and assist him at every turn of his chequered career, is not a convincing figure. His character, which is drawn in full detail, undergoes little development, and his actions seem sometimes hardly consistent with it, while the folly of the lady who marries him is somewhat surprising. But most of the incidental character-drawing is skilful, and the interest of the narrative is well sustained.

The White Owl. By Kate Horn. (Stanley Paul & Co.)

THE one attractive thing about this unconvincing story is the genial ease with which it is written. Both in plot and characterization it is singularly weak. The scene is divided between a farmhouse in Lincolnshire, where a fashionable young lady seeks refreshment for body and soul, and a geranium-clad villa in Sicily, where her self-centred mother is supposed to be devoting herself exclusively to novel-writing. Some of the Lincolnshire scenes are not wanting in artistic touches; but the rusticity leaves, for the most part, a theatrical impression, which is deepened by the violent contrast of some melodramatic incidents in Sicily.

The Path of Glory. By Paul Leland Haworth. (W. J. Ham-Smith.)

MR. HAWORTH has chosen an appropriate title for an historical romance which culminates in the taking of Quebec; but of Wolfe himself, as of Montcalm and Washington, we see little. This Olympian trio remain, for the most part, behind the scenes, while our attention is concentrated upon the daughter of a French commandant and her rival lovers—a Virginian officer in the British army and a quarter-bred Canadian in the service of the most Christian king. Terrible and heroic things are done in the course of this love-affair, including capture by Indians, several narrow escapes, and a great deal of spirited fighting. The interest is well sustained, and for the principal characters all ends satisfactorily.

The Unknown Isle. By Pierre de Coulevain. Translated from the French by Alys Hallard. (Cassell & Co.)

THIS view of England interspersed with comparisons of French life has already attained celebrity in the original, and may well have a further vogue in the present rendering, which is comely in form and reads well. The English are of all people most in need of outside views concerning themselves, for the national complacency remains proof in many quarters against

signs and tendencies disturbing to the observant. The French author lays a light and graceful hand on our deficiencies, and flatters our vanity with equal deftness. Her book was written some while since, but affords a fair view of a typical stratum of English society in which life is comfortable, but money a consideration.

SCOTTISH BOOKS.

Records of Inverness.—Vol. I. *Burgh Court Books, 1556-86.* Edited by William Mackay and Herbert Cameron Boyd. (Aberdeen, New Spalding Club.)—The extracts given in this volume are from the oldest extant records of the Inverness Burgh Court. They are of much interest, covering as they do a period of special importance in the history of Scotland—the period of the Reformation. In this connexion, however, it is curious to find that the extracts present no indication of the conflict that ended in the disestablishment of the ancient Church. On the other hand, we have the strange sight of the old Church revenues being enjoyed partly by clergy still Roman Catholic and partly by those of the reformed faith. For many years after the legal establishment of Protestantism priests fill the office of town clerk; events are still fixed by reference to old Church festival days; monks, parsons, and chaplains continue to get their former titles; and solemn oaths are still taken on the Holy Evangelists. The parish church, we gather, was covered with thatch; and the frequent mention of the "sclait [slate] house" shows that thatch was the prevailing roofing material. The depredations of wolves are often referred to.

Female slanderers are "branked," and a common punishment for males is to have the ear nailed to the tron. One victim is to remain there for nine hours and then "tear his lug from the nail"! Another offender consents, "if he be fundyn slaying salmon on the Water of Ness, to be hangit." The common drink was ale and beer, for the quality of which an official "taster" was responsible. The state of the roads may be inferred from the fact that their "native soil" was often illegally tilled by crofters and others.

The records are somewhat imperfect in so far as they present rather more of the dark side of life than the bright. Although there are references to a Lord Abbot Unreason and his company, and to such festive seasons as Beltane and Yule, there is little to be learnt regarding the pastimes and amusements of the people. The Burgh had its "common minstrel," and Mr. Mackay, who writes the Introduction to the volume, is probably right in assuming that his instrument was the bagpipe, although it is doubtful if the eighty "pipers" in Charles II.'s army in 1650 were players of the Highland instrument. The elegance of Inverness English in the old days was often remarked by travellers. Dr. Johnson ascribed it to the sojourn of an English regiment in the town during the Commonwealth, an idea which Mr. Mackay refutes. Its origin is to be found rather in the fact that the language was acquired by a mainly Gaelic-speaking people, whose tongue was remarkably free from "brogue" or "accent." The illustrations in the volume include the earliest known plan of the Inverness district (1725), hitherto unpublished. A Glossary and an Index are promised for a second and completing volume.

It is likely enough that the lectures of Sir George Douglas on *Scottish Poetry: Drummond of Hawthornden to Fergusson* (Glasgow, MacLehose), were enjoyed by the audiences before whom they were delivered, but they do not very successfully stand the test of deliberate perusal. Yet the period with which they are concerned—"that which intervenes between the last followers of the old Scottish Makars and the National Revival of the Age of Burns and Scott"—if not in itself of particular interest, seems to admit of considerable freshness of treatment, for it has hitherto received comparatively scant attention. Sir George Douglas is generally content to follow the traditional lines of criticism without adding much of significance or placing matters in a new light. He has supplied brief sketches of the lives of Drummond, Thomson, Armstrong, Blair, Beattie, Home, Allan Ramsay, Alexander Ross, and Fergusson, and has characterized their work in a mildly agreeable fashion.

In his appreciations of the poets Sir George occasionally shows a good deal of partiality: Drummond, for instance, that admirable artificer in verse, is, we think, credited beyond his due with sincerity of emotion; and no mention is made of the plagiarisms from Italian, Spanish, French, and English authors with which, as Prof. Kastner has shown, his poems are riddled. Even in his apparently simple pieces the simplicity is premeditated; and surely when Sir George declares that some of the madrigals "have the unstudied grace of epigrams of the Greek Anthology," he chooses an epithet inapplicable either to Drummond or the epigrammatists. Again, we should say that excessive praise is awarded to Thomson as the poet of Nature. There are various other matters the presentation of which strikes us as somewhat one-sided. However, the volume may serve as a pleasant, if slight introduction to its subject.

Students of Carlyle's 'Cromwell' will remember the eulogistic reference to "Archibald Johnston of Wariston...redactor of the Covenanters' protests in 1637 and onwards; redactor perhaps of the Covenant itself...a very notable character, of whom our Scotch friends might do well to give us further elucidations." Carlyle doubted whether any human soul would "ever again take pious pains" with Wariston. His doubts have been favourably resolved by the Scottish History Society's publication of the *Diary of Sir Archibald Johnston of Wariston, 1632-9*, edited by Dr. George Morison Paul (Edinburgh, T. & A. Constable). Indeed, "pious pains" might well be taken with one of the most remarkable, and, in some respects, the most interesting, of the leading Scotsmen who lived in the troubled times beginning with the Service Book riot in St. Giles', Edinburgh, the swearing and subscription of the National Covenant, and the abjuration of Episcopacy in 1637-8; and ending with the overthrow of the Protectorate and the restoration of monarchy in 1660.

The great Covenanter's Diary, recovered after all traces of it had long been lost, presents the "further elucidations" which Carlyle called for, and is, in many ways, a valuable addition to the literature of the Covenant and the Covenanters. It is interesting alike on human and historical grounds; for Wariston was in the way of becoming a great lawyer when he virtually abandoned his profession and devoted all his energy and talent to the Covenanting party. The Diary reveals him in a character quite op-

posed to Carlyle's epithet of "canny." It shows him as a man of highly-strung and excitable nature, an extremist who would not listen to moderation, and paid for his obstinacy on the scaffold, as his nephew Bishop Burnet predicted he would.

Dr. Paul's Introduction and notes are helpful, but both include some unnecessary repetitions. Thus in the notes it is twice explained that "laid a braid hand" means fully exposed; and several of the details here are anticipated in the Introduction. There is a good Index.

Dean Stanley in a well-known passage exclaimed: "Honour to those Scottish Churchmen for their devotion of themselves, not only to death, but even at times to absurdity!" Whatever may be said as to the absurdity, it can hardly be denied that martyrdom in a good cause is the life-blood of the Church and the world. The story of the Scottish Covenanters who bravely faced the notorious "killing time" emphasizes this. The Covenanters had their infirmities and defects. Goaded by oppression, by "harsh law and sworded might," they said and did things which were unfortunate and even "absurd." But they counted many true heroes among them; and of all who served under the blue banner there was none nobler than Alexander Peden, the story of whose life has been told by the Rev. Kirkwood Hewat under the title of *Peden the Prophet* (Ayr, Stephen and Pollock).

Peden's career affords a good example of the sufferings of "God's persecuted people" at the hands of compatriot Protestants who, in Wordsworth's phrase, drew their warrant "from councils senseless as intolerant." For nothing but his unflinching adherence to the Covenanted Reformation, Peden was expelled from his charge at New Luce, imprisoned for years on the Bass Rock (this is noticed in Stevenson's 'Catriona'), hunted on mountains and moors till his death in 1686, and finally dragged from the grave by a troop of dragoons, "that they might do to Peden dead what they had not been able to do to Peden living, namely, hang him on the gallows tree."

Mr. Hewat's book is avowedly for the general reader. There is little novelty in it, but the story, accurate in its details, is set forth picturesquely and without undue prejudice. It is interesting to note that the Boswells of Auchinleck were friendly with the Peden family. It has often been stated that the "prophet's" body was buried first in "the laird of Auchinleck's aisle," but this has been disproved, as Mr. Hewat mentions. The book has a good Index, and there are some illustrations.

A Scots version of Wyclif's New Testament, published about 1520, has this rendering of a familiar passage: "Gader ye the relefis that ar left, that thai perische nocht." The words have been taken for motto by the Edinburgh Rymour Club, whose first volume, *Miscellanea*, has been printed for members and issued from John Knox's House, Edinburgh. The main object of the Club is to gather and preserve the many scraps and fragments of Scottish rhyme and music that have hitherto escaped the eye of the collector, so "that thai perische nocht." In this way the Club hopes to do a useful, if modest service to national history and to literature.

In the Club's initial volume attention has been devoted largely to children's rhymes and rhyme games, the bulk of which have had, so far, a merely oral existence. It is

curious to compare the variants supplied by correspondents from different parts of the country—variants which the present reviewer could supplement in not a few cases. One "charm" is given, but there must be many more still recoverable. Some new specimens of the "bothy songs" sung by ploughmen are printed, but those who are intimate with Scottish country life are painfully aware that the vast majority of such rhymes are too frankly pagan in their dealing with sexual relations to bear the light of print.

The specimens of "psalmody rhymes" are instructive as showing the distorted views held by some ecclesiastics during the earlier and middle portions of last century. These rhymes owed their existence to the attitude of certain ministers who thought it irreverent to employ the words of Scripture at choir practices. So ludicrous are some of the parodies of sacred sentiments printed here that the hand of the wag rather than the conscience of the purist may be detected in their production. Their use, however, is indisputable, and it is well to have them thus preserved. On p. 134 we find what is called 'A Forfarshire Grace,' beginning "Grace be here, and grace be there." But this has been long familiar in other counties, and indeed is (though erroneously) often attributed to Burns. A foot-note on p. 172 ignores the fact that there are other claimants than Thomson to the original of Dominie Sampson. In 'The Numerals in Rhyme' (p. 54) "eight" should be "eicht," for the sake of the assonance. We are glad to have the music to many of the songs and rhymes in the volume, but the facsimiles have an odd appearance, the "heads" of the notes being often formed on the wrong side of the stem.

We note that in the list of the Club's corresponding members prefacing the volume, the names of one or two long-deceased persons are included. Mr. William Carnie of Aberdeen, to take one example, died in January, 1908.

OUR LIBRARY TABLE.

MR. G. R. STIRLING TAYLOR evidently realizes the fact that to compress *An Historical Guide to London* (Dent) into a single octavo volume is not unlike attempting the feat of making a pint pot hold a quart of beer, or Jack Cade's promise that "every three-hooped pot shall have ten hoops." By judicious arrangement, however, he has managed to give as much history as the general reader may require, and has presented it so that it can be grasped by the visitor as he perambulates the streets.

There are three parts: 1. The General History; 2. Fifteen Itineraries of the chief districts of London; 3. A Gazetteer, or alphabetical description of places of special interest. The book is illustrated by a brilliant series of photographic pictures of interesting relics of old London, taken from the most advantageous positions. The history may thus be read at home, and the Itineraries and Gazetteer used on the spot.

The author has treated his subject with much discrimination, but in dealing with Roman London he has taken too much for granted; for instance, he writes:—

"For a long period of their history, London and Westminster ranked almost as equals: the one the city of the people, and the other the city of the King's Court, clustered round the Abbey Church.....

With a great church and a royal palace, Westminster was long a serious rival to merchant London";

and again of Westminster we read:—

"We have reached the first important settlement or town, which might easily have become the predominant rival, and supplanted the town of London as the chief place."

There is really no authority for such startling statements, and they look like a reaffirmation of Besant's unsupported theory of a Westminster earlier than London.

Some writers hold that before Roman London was built on the north bank of the Thames, and before the existence of a bridge over the river, a road led along the bank to what was afterwards called the Horseferry; but, if this were the case, it was not a road to a busy town, afterwards named Westminster, but rather an easier route to the north. We need a much more thorough knowledge of the bed of the river in the prehistoric period before we can be certain that the Horseferry at Westminster was the first fordable place in the neighbourhood of what became London.

The later history of London is clearly and succinctly stated by Mr. Taylor, and the Itineraries are well arranged. The great difficulty of putting within about 150 pages an alphabetical list of interesting buildings, streets, and districts is well overcome, and the points most useful to the London visitor are skilfully selected.

SIR HUBERT VON HERKOMER has completed his frank autobiography *The Herkomers* (Macmillan) in a second volume which is as readable as the first. He takes the keenest pleasure in describing his successful career from 1882 onwards. For some reason, he makes only incidental references to the school at Bushey which he carried on for many years, but there are no other noteworthy omissions. He tells us of his popularity as a portrait painter with an uninterrupted flow of commissions, and explains that he no longer paints subject pictures because the demand for modern work of this kind has ceased. He relates his experiments in enamels with more enthusiasm than most critics have shown, as he himself admits, and touches on his essays in etching and lithography. He gives a chapter to the pictorial music-play which he invented, composed, and produced in his own theatre, with Dr. Richter as conductor, in 1889. He recalls his experiences as Slade Professor and as lecturer. Finally, he describes in much detail the building and decoration of his house at Bushey, with its Romanesque elevation by the late H. H. Richardson, an American architect of the new school, and its strange and sombre Gothic interior planned by himself.

The most suggestive pages in the book are those in which the author discusses the inherent difficulties of portraiture, and states the case for the conventional studio-lighting, with which the old masters were satisfied, against the open-air effects that some modern painters strive to render. The argument is a little too generalized to be convincing, for "plein air" has meant different things to different artists, from Constable, say, to Matisse. Further, it is far too soon to conclude that modern portraiture cannot attain the "monumental" quality which Sir Hubert finds in the art of the past, and misses in the art of the present. The book is illustrated with reproductions of some of the author's portraits, including

the 'Council of the Royal Academy' and the 'Lady in Black,' photographs of his house, and a small plate after his ambitious enamel 'The Triumph of the Hour.'

Recollections of a Parisian (Docteur Poumiès de la Siboutie) under Six Sovereigns, Two Revolutions, and a Republic (1789-1863). Edited by his Daughters Mesdames A. Branche and L. Dagoury. Translated by Lady Theodora Davidson. (John Murray.)—These 'Recollections' were well worth translating, if that can be said of any French memoirs; for, as we have remarked before, there are few people at the present day in England, interested in that class of literature, who are incapable of reading it in its original French. Lady Theodora Davidson has done her share of the work extremely well. Towards the end her translation bears marks of fatigue, which is not unnatural, and we find a few renderings of the original which might be improved. For example, at the elections of April, 1848, the author describes the polling place at the Palais de l'Institut, and is made to say "I assisted in the office," the correct English version of the French being "I was one of the presiding officers." But on the whole the translation is excellent, and we can pay it no higher compliment than by saying it is easy to read.

Volumes of posthumous memoirs ought always to be edited. The author of these 'Recollections' complains of Chateaubriand's inaccuracies in his 'Mémoires d'outre-tombe,' where his account of the "Days of July" "bristles with errors." A greater memoir-writer than Chateaubriand was not infallible in this respect—Saint-Simon, and not a little of the labour expended by M. de Boislisle in his magnificent edition of the 'Mémoires' is devoted to the correction of errors. One does not expect similar pains to be taken over every collection of reminiscences which is brought to light in France; but French publishers are too prone nowadays to offer to the public reproductions of private correspondence and journals just as they were written, without any emendations or explanatory notes.

Dr. Poumiès de la Siboutie was generally an accurate diarist; but journals are seldom written without a few slips of the pen, and mistakes in the transcription of handwriting are easily made. Thus in the account of the Assembly which Napoleon convoked at Paris, a fortnight before Quatre Bras, it should have been made clear by the French editors that, though it took place on the Champ de Mars, it was known as the Assemblée du Champ de Mai. In a description of Cambacérès, under the Empire, a reference to the "Biographical Index" at the end of the book confuses the Arch-Chancellor with his nephew. Among minor mistakes made by the author we may note that Pouqueville, who was taken prisoner during Bonaparte's Egyptian expedition and sold as a slave at Constantinople, was a member, not of the Académie Française, but of the Académie des Inscriptions. Nor was Bernadotte King of Sweden in 1814. He was "adopted" as Crown Prince in 1810, and became King only in 1818 on the death of Charles XIII. The statement that Marshal Soult went "to England in 1838 on the occasion of the marriage of Queen Victoria" ought to have been put right in the English version.

In spite of these slips, the book is of the highest interest. Beginning with the outbreak of the Revolution, when the author was a boy at Périgueux, the narrative assumes the form of a journal in 1810, when

he went to Paris at the zenith of the First Empire; and it is continued with few interruptions until 1863, when the doctor died, seven years before the fall of the Second Empire. Every part of the book is full of valuable historical information, throwing light on various phases of French society under all the *régimes* which the author saw—whether he is describing the medical body in Paris at the end of the reign of Napoleon; or the sympathy of the French people, at the time of his fall, with the allied invaders; or the public ignorance in France about the Bourbons when they were restored to the throne; or the character of Charles X. and of his minister Villèle on the eve of the Revolution of July. The doctor is equally interesting when narrating the execution of Ney and the baptism of the Prince Imperial, both of which scenes he witnessed, or explaining how the Rue de Lille had its name restored, or how the Rue Vaneau obtained its name, in memory of the youth from the École Polytechnique who died while leading a column of insurgents on one of the *journées glorieuses de Juillet*.

WITH the *Ballads, The Rose and the Ring, Rebecca and Rowena*, and the "opus-cules denominated 'Christmas Books'" (as they were styled by the great Mr. Samuel Phillips of *The Times*), the lover of "W. M. T." has an ample feast in the new volumes of the "Thackeray Centenary Biographical Edition" (Smith & Elder). Moreover, in addition to a new portrait after a photograph by Herbert Watkins, the two introductions in this case are exceptionally full and anecdotal, while we have a fresh consignment of those "cawickachaws" which so "arried" Capt. Hicks in 'The Kickleburys on the Rhine.' There is a facsimile autograph of that 'Church Porch' which Arthur Pendennis wrote for the 'Spring Annual' of Lady Violet Lebas; there is also a delightful picture of a buxom Maid of Honour, breakfasting, "in the spacious times of great Elizabeth," on beef and morning ale. An unused drawing shows the discarded Fairy Crookstick of 'The Rose and the Ring' (she is called "Hopstick" in the 'Blackstick Papers'); another goes beyond the story and sets forth the deplorable fate of Jenkins Gruffanuff and the Countess, his wife, reduced to take in washing. There is excellent discourse of Thackeray as a verse-writer; and, although we are far from agreeing with the astounding dictum of Carlyle, as reported by William Allingham, that the "Irish ballads were the best things he [Thackeray] ever wrote"—an utterance which might pair off with Matthew Arnold's equally unguarded assertion that there was more in one little volume of André Chénier than in the whole of Victor Hugo—it would certainly be hard to find pieces much better, in their own way, than 'Bouillabaisse,' the 'Cane-Bottomed Chair,' 'Ho, pretty Page!' and the 'Chronicle of the Drum,' which the sage of Chelsea had probably never read. But it is not good to praise the master unwisely, as does Mr. Willis of America and *The Home Journal*, who thinks that to rhyme "Guiccioli" and "habitually" is a masterpiece of droll ingenuity. On this point we should have liked the verdict of the late lamented Sir W. S. Gilbert.

The Ta'rikh-i-Guzida or 'Select History' of Hamdu'llah Mustawfi-i-Qazwini. With an Introduction by Edward G. Browne.—Vol. I. Text (in facsimile). E. J. W. Gibb Memorial. (Luzac & Co.)—Hamdallah Mustawfi is best known to students who do not consult manuscripts by his 'Nuzhat al-

Qulub,' the geographical treatise of which Mr. G. Le Strange has made such excellent use in his 'Lands of the Eastern Caliphate' and other writings on Mohammedan topography. The historical compilation of which the Gibb Memorial has now issued the text (a good facsimile of a MS. transcribed in 1453, formerly belonging to Prince Farhad Mirza, uncle of Nasir ad-din Shah) has hitherto been known chiefly by M. Gantin's edition and translation of the fourth chapter only (one of the most useful, however), and by M. Barbier de Meynard's translation of the sixth chapter, dealing with the history of Qazwin; but Prof. Browne has himself translated part of the fifth chapter, relating to the Persian poets, in the *Journal of the Royal Asiatic Society*, where he has also discussed the various MSS. and sources of Mustawfi.

Students will no doubt be glad to have the text of the 'Select History' at their disposal in this convenient form, since it covers periods, especially of Persian history, for which good authorities are not too numerous or accessible in print. Mustawfi wrote the 'Tarikh-i-Guzida' in 1330, and is an example of the singular fact that the Mongol invasion of the thirteenth century, whilst ruining to a calamitous degree the civilization and culture of Middle and Nearer Asia, stimulated in a remarkable manner the writing of important historical works. Mustawfi's, indeed, cannot be classed with the greatest of these, for it is modelled on a far greater work, Rashid ad-din's, and is in fact, as Prof. Browne says, "a useful compendium of Persian and Mohammedan history" based on some two dozen earlier writers. The Gibb Memorial Committee are printing two of the most valuable of these, Rashid ad-din (in part) and Juwayni; but it will probably be long before they can be completed, and meanwhile Mustawfi's compilation will be welcomed. It begins in the usual Eastern manner at the Creation, runs through the ancient kings of Persia, the Prophet Mohammed and the Caliphs, and then comes to the Persian dynasties, Khwarizm Shahs, Atabegs, "Assassins," and Mongols. The facsimile gives no aid to the student in finding dates or names, and it is a pity that head-lines were not added. The second volume, however, promises indexes and a fairly detailed abstract of contents, which will partly supply this deficiency, though it will not quite remedy the inconvenience. Prof. Browne contributes a brief Preface.

The Place-Names of Lancashire, their Origin and History. By Henry Cecil Wyld and T. Oakes Hirst. (Constable & Co.)—In externals this large and costly volume contrasts curiously with Prof. Skeat's little book on 'The Place-Names of Berkshire,' noticed in *The Athenæum* of April 29th, but otherwise there is a great deal of similarity between the two works. In both the right methods of investigation have been employed, with abundant industry and adequate philological knowledge. If the amount of absolutely certain result in Prof. Wyld's work (Dr. Hirst's collaboration, as we learn from the preface, has consisted mainly in the collection of material) is disappointingly small, this is due not to lack of competence on his part, but to the imperfection of the available evidence. Hardly any Lancashire place-names are found in writings earlier than the Conquest, and comparatively few occur in Domesday Book; and the forms recorded in documents from the thirteenth century onwards can often be interpreted, if at all, only by doubtful conjecture. Prof. Wyld's conjectures generally take due account of the

ascertained phonological laws, but he is unfortunately too ready to assume irregular changes in the declension of Old English and Old Norse personal names. He says, for instance, that the syllable *ing* in Alkrington represents the *-an* of a weak genitive of Ealhhere. The name was, no doubt, originally Ealhheringtūn (or in Anglian form Alhheringtūn); but the author seems to have a prejudice against admitting the existence of the suffix *-ing* in Lancashire place-names, though formations like Ælfrēdingtūn abound in Old English charters, and such changes as that of Abbandūn into Abingdon can only be due to analogy. Several of the names which Prof. Wyld explains unsatisfactorily, or (with commendable caution) leaves unexplained, are, we think, derived from names of streams, or otherwise contain elements of pre-English origin. In spite of defects which may be remedied in a future edition, this is a book of substantial value.

Catalogue of Romances in the Department of Manuscripts in the British Museum. Vol. III. By J. A. Herbert. (British Museum.)—Gaston Paris used to advise the student of French mediæval literature to begin with the history of Buddhism: to refer the inquirer into English pulpit oratory to a catalogue of romances sounds almost as strange. Yet here he will find the anecdotes and illustrations by which mediæval preachers pointed the moral of their discourses and held the attention of their auditors. The earlier volumes of this Catalogue, edited by the late Mr. Ward, have taken their place among the classics of critical bibliography of mediæval romance. Mr. Herbert, denied his opportunities of working on a large scale, has found opportunity for showing an equal mastery in his treatment of the hundreds of stories and anecdotes he has had to trace to their source and catalogue.

Mr. Herbert classifies his collections as either *exempla* and moralized tales or tales and anecdotes. They were made in Western Europe, and their dates correspond, as might be expected, with the revival of preaching. During the dark ages preaching was neglected, and a formal sacramentalism became the leading note of Christianity. With the revival of learning preaching again became popular. St. Bernard set the example, which was followed not only by a few orthodox, but also by a host of heretics; the mendicant orders came in their turn and revived the formalism of religious life, giving to preaching a place in the Church which it has never since lost. The *exempla* were collected for use in sermons; the collections of tales were also for private devotional reading. The earliest collections date from the middle of the twelfth century, and are mainly extracts from the 'Vitæ Patrum' and St. Gregory's Dialogues and Homilies. In the thirteenth century a wider field was found necessary. Preachers discovered that while the most educated audience rarely resents a well-chosen illustration, one composed of illiterates demanded teaching founded entirely on parables and anecdotes, and as a result popular sermons and devotional books were filled with stories to which edifying explanations could be attached.

The most popular of these collections were those of Jacques de Vitry, Odo of Cheriton, Etienne de Bourbon, and Robert Holcot, the 'Gesta Romanorum,' the 'Handlyng Synne' of Robert Manning, and the Dialogues of Caesarius of Heisterbach. The 'Gesta Romanorum' is familiar to most persons interested in the Middle Ages. Its

origin is still a matter of debate, and Mr. Herbert, in summing up the evidence, shows that the name has been applied to three distinct, though overlapping collections. The earliest manuscript is dated 1342, and its compilation cannot be much earlier, as some stories are borrowed from Holcot: it was probably composed in Germany by a Franciscan. Jacques de Vitry, who preached against the Albigenses, c. 1213-16, wrote four collections of sermons, one of which, the 'Sermones Vulgares,' addressed to men of various conditions, contains many *exempla*. One of them, the story of the man pursued by enemies on black, white, and roan horses, is still current in the desert. St. Dominic, who also preached against the Albigenses, is known to have used *exempla*, but none of his sermons is preserved. Etienne of Bourbon, who became a Dominican in 1223, left us a large collection (published in 1877), many of them borrowed from Jacques. Odo of Cheriton, an Englishman who died in 1247, made great use of Reynard the Fox, Æsop, and the Bestiaries for his collection. Holcot, Robert Manning, and others date from the fourteenth century.

An interesting study might be made of the morality of these moralizations, though limitations of space forbid our attempting it here. Quite recently, however, it has been asserted that the early history of St. Francis is made up of borrowings from one of these collections, that of Cæsarius of Hersterbach. He was a Cistercian of an abbey near Treves, and wrote his 'Dialogus Miraculorum' between 1221 and 1224. The spirit of his writings, like that of his order, was utterly different from that of his Franciscan or Dominican contemporaries. These bodies owed, in fact, their origin to the revolt against the spirit breathed in this book—a reliance on formulas in which the sacraments became mere incantations. Take one of the miracles: a priest having wronged a girl, her father goes to the church to expose him, but, as the priest has confessed and received absolution, the father is struck dumb. It was this sort of miracle and the teaching based on it that fostered the growth of the numerous sects of heretics whom the friars had to convert. Cæsarius, too, is not always to be trusted when he makes a direct statement: in many cases where he says that he speaks from personal knowledge, the tale can be traced back for centuries. But his stories are full of local colour and interest.

We wish to pay a special tribute to Mr. Herbert's annotations. They are short, and, as far as may be, non-controversial, but they will be found of great assistance to the student of the folk-lore of mediæval tales. A fourth volume, completing the Catalogue, and dealing with the Chaucer, Petrarch, Æneas Sylvius, and other romances, is promised; it will contain a General Index, and thus give this instalment its full usefulness.

The Upper Norwood Athenæum Record for last year shows this Society to be going on well, and to be extending its usefulness. The rambles do not confine their work to the summer months, but are also active during unfavourable weather in visiting places nearer home. On the 19th of March Fishmongers' Hall and the church of St. Magnus the Martyr were visited. The summer excursions included one to St. Peter's, Berkhamsted, when a paper was read by Mr. Burch, who described the memorial window to Cowper, the brasses, church registers, and the charter granted

by Henry II. Another ramble was to Lesnes Abbey, under the leadership of Mr. W. T. Vincent, who is actively engaged in the excavations on the site, now being carried on under the direction of the Woolwich Antiquarian Society. There is still much to be done if the investigation so well begun is to proceed to a satisfactory conclusion; but the Woolwich Society, though it has raised and nearly expended about 90*l.* during the past year, has been obliged to ask for help. The Society of Antiquaries and the Kent Archaeological Society have made grants towards a suggested fund of 500*l.*, and an influential committee has been formed to support the work.

One of the old-world villages of Middlesex, Ickenham, was visited on the 18th of June; and Windsor Castle on the 16th of July, when ladies were included, and Canon Dalton took the visitors over St. George's Chapel. Visits were also made to Chichester, Eltham, Chelmsford, and Bromley. An introduction to each ramble is given by an old friend of the Society, Mr. W. F. Harra-dence; and Mr. Theophilus Pitt, who is now one of the oldest members, edits the 'Record' with his usual care. The volume is full of excellent illustrations, which are, for the most part, from photographs taken by members of the Society.

THE Festival Souvenir Number of *The Standard of Empire* has pre-eminent claims for recognition at this season, recording at once a birthday, and successful service to the Britain beyond the seas, for which it has claimed a hearing only due. The number is well illustrated, giving a good idea of prominent men and characteristic scenes in the Empire.

THE DILKE 'ENDYMION' AND MILTON.

MAY I add another word in reply to Mr. Buxton Forman? He thinks that up to the time when he first knew the late Sir Charles Dilke, Sir Charles had not "examined very closely the question of the handwriting." I have already shown that it was before that date that Sir Charles wrote, in 'Papers of a Critic,' that the poems were "in Keats' writing."

As to whether it was Keats's own copy, I would point out that Lord Houghton (who knew the book and worked on it) wrote that "Keats's own copy of the 'Endymion' is in the possession of Sir Charles Dilke."

If Mr. Buxton Forman thinks the manuscript is not in the hand of the poet, I do not understand why he altered the text of Keats from the Dilke manuscript.

As to spelling, it does seem to me to imply a ludicrous degree of hero-worship to suggest that Mr. C. W. Dilke copied the poet's mistakes. H. K. HUDSON,

Ex'or of the late Sir Charles Dilke.

OLD WORKINGS AT TINTERN ABBEY.

AMONG the heterogeneous papers of the Court of Requests are preserved a few which remain of general importance.

A complaint was made on June 25th, 2 James I., by "the Governors, Assistants, and Society of the City of London, of and for the Mineral and Battery Works," which gives interesting details as to the advance of science, and the progress of manufactures at that time. It is stated that the late Queen Elizabeth had been told by William

Humphrey, Saymaster of the Mint in the Tower, that by great efforts he had induced

"one Christopher Shutz, now deceased, an Almaine, born at St. Annen Burgh, under the obedience of the Elector of Saxony, a workmaster of great conning, knowledge, and experience, as well in the finding of the Calamine Stone, called in Latin *Lapis Calaminaris*, and in the proper use thereof, and in the mollifying and manuring of Iron and Steele and drawing and forging the same into Wyer and plates for the making of armour, and for divers other necessary and profitable uses, to come over with him to this country."

The Queen, through her good hope in the possible success of this enterprise under Shutz, granted letters patent at Westminster dated September 17th, 7 Eliz., giving full power to the said William Humphrey and Christopher Shutz, their deputies, servants, and workmen,

"to search, dig, mine for the Calamine Stone and all kinds of Battery wares, to make cast worke and wyer of Lattin, Iron, Steel, and Battery, to manure and work into all manner of plate and wyer,"

to their own profit for ever. And they were allowed to build any houses suitable for their work, at their own cost and charges, on her own royal property or the property of any of her subjects, without any let or hindrance, with various other powers, privileges, and immunities for raising sufficient stock, for building of watercourses, for provision of wood and coal, paying wages and buying tools, and other things necessary. William Humphrey and Christopher Shutz gave concessions of shares to others, and these were, by another royal patent, incorporated into a company by the name of "the Governors, Assistants, and Society of the Mineral and Battery Works." It seemed to have succeeded. The Right Hon. William, the late Earl of Worcester, owned lands in Tintern and Chapelhill, co. Monmouth, with divers houses built thereon, and in 29 Eliz., in consideration of a large sum of money paid as a fine, he leased them to the Society for 21 years by a legal deed, which might be renewed. This included all the edifices in the parish of Chapelhill, in the lordship of Tintern, co. Monmouth, that were erected, or would be erected for their works; also as much as they required of the stream called Angewe Brook, with the waters, watercourses, banks, dams, walls, fences, and enclosures for its necessary course to the houses and buildings. The land extended from the Tryen-bridge to the meadow then in the tenure of John Edwyn alias Barber and Margaret his wife, and so much of the old ditch or water-course which was digged to convey water out of the brook to the mill that sometime stood within the walls or precincts of Tintern Abbey, and all the banks and enclosures of this old ditch from the beginning of the old issue out of Angewe Brook to where the Barbor's hedge crossed the ditch, and the new ditch made lately to bring the water back to Angewe Brook, as far as it led to Tryenbridge, with free ingress and egress, liberty to dig, to convey away, and to make water passages for their use. The only rights reserved to the Earl were the woods and mines on the estate: all other rights were transferred to the Company, it paying £4 a year as rent, and rendering certain services to the lord.

They reminded King James that he had renewed the patent on January 22nd last past, and signified his royal pleasure that he would grant a new and more effective patent, and no one should interfere with the Company. They set to work 600 poor people on the spot, and helped 20,000 others of the people. Notwithstanding this, one John Philipps and Gwenllian his wife, late

wife of Thomas Welsh *alias* Irish, deceased, of Chapelhill,

"being riotous and outrageous and evil disposed persons, and intending the let and hindrance of the wire works at Tintern, the utter undoing of the poor people therein working, and the disturbance of the Company in its quiet proceedings, having gotten into their hands the deeds of the lease made by the Earl and other deeds belonging to the Company, have made forcible entry by outrageous means, as by throwing of scalding water, and with spits and other desperate weapons have forced out and kept out the Company's workmen out of their working places, and houses built upon the ground for them"

by the plaintiffs' predecessors, to their great loss. These defendants also

"stop the watercourses which issue from these works and workhouses, so that the wheels of the other houses are so drowned in water they cannot turn. This is to the great impoverishment of the poor workmen and the many thousands who live by working the wire to divers uses, which is first made by these workmen. If these defendants are allowed to continue their oppressions, it will become a general harm to the whole dominion, for many depend on wire to make woolcards and many other things of great necessity, which cannot elsewhere be so plentifully had, except from foreign parts."

In tender consideration of their difficulties, seeing they cannot sue at common law because they have not the lease granted them by the Earl, and do not remember the exact dates, and also for the present necessity of the continuance and daily keeping up of the wire works and poor people at work, and as the action of the defendants is an intolerable offence not only to the plaintiffs, but to the commonwealth, and work may not be stayed or hindered a week without great loss all round; they therefore pray a privy seal to be sent to John Phillipps and Gwenllian his wife to appear immediately, and also an injunction to them to stop all their proceedings until they have answered this complaint.

Unfortunately the rest of the suit is not to hand, and we have no "answer," "replication," or "depositions" to supply further details, but they may be found yet. Meanwhile Dr. Owen might turn his researches to a practical use and excavate the site—perhaps even find the Company's books, with the name of Bacon as a shareholder, a little further up the Wye, where the Anjou Brook enters it.

CHARLOTTE CARMICHAEL STOPES.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

- Carpenter (J. Estlin), *The Historical Jesus and the Theological Christ*, 3/6 net.
 Coit (Stanton), *Two Responsive Services in the Form and Spirit of the Litany and the Ten Commandments*, for use in Families, Schools, and Churches, with a Commentary, 6d. net.
 In the Ethical Message Series.
 Psalter in Latin and English, 4/6 net.
 With an introduction by J. H. Bernard.
 Unitarian Penny Library: *How I Became and Why I Ceased to be a Roman Catholic*, by W. Moritz Weston; and *The Unitarian Movement in Scotland: its Justification*, by Alexander Webster.
 Wesley (John), *Journal*, Standard Edition, Vol. II., 10/6 net.
 Enlarged from original MSS., with notes from unpublished diaries, annotations, maps and illustrations. Edited by Nehemiah Curnock, and others.
 Wilkinson (the late Most Rev. G. H.), *Practical Counsels to Working Christians and Communicants*, 1/ net.
 Part of the English Churchman's Library.

Fine Art and Archaeology.

- Briggs (R. A.), *The Essentials of a Country House*, 7/6 net.
 With numerous illustrations.

Godfrey (Walter H.), *A History of Architecture in London*, arranged to illustrate the Course of Architecture in England until 1800, with a Sketch of the Preceding European Styles, 7/6 net.

With a preface by Philip Norman, and 250 illustrations, 7 maps, and descriptive guide to the buildings.

Salomons (Vera), *Gravelot*, 15/ net.

With 21 photogravures from negatives by the author. In the series of Eighteenth-Century French Book-Illustrators.

Whitechapel Art Gallery, *Annual Report for 1910*.

Poetry and Drama.

Béranger, *Les Chansons: Morceaux Choisis*, Préface de Comte Serge Fleury, 1/6 net.

In *Les Classiques Français*.

Childe (Wilfrid Rowland), *The Little City*, 1/ net.

A collection of poems.

Dante, *Divine Comedy: Vol. I. Hell; Vol. II. Purgatory; Vol. III. Paradise*, 2/6 net each.

A new translation into rhymed verse, keeping the triple rhythm of the original, by C. E. Wheeler.

Ellesmere Chaucer, reproduced in Facsimile, 2 vols., 50l. net.

Figgis (Darrell), *The Crucibles of Time, and other Poems*, 3/6 net.

Goodfellow (J. Cumming), *Hawick's Annual Festival, and other Verses*, 2/6 net.

With notes on some of the poems.

Macdonald Collection of Gaelic Poetry, by the Rev. A. Macdonald, Minister of Killearnan, and the Rev. A. Macdonald, Minister of Kiltarlity, 21/

Shakespeare's *The Tragical History of Hamlet, Prince of Denmark*, Édition de Luxe, 10/ net.

New Place Edition, edited by Sydney Humphries.

Smith (Horace), *Ode on the Coronation of King George V., for the 22nd June*.

Privately printed.

Bibliography.

Weare (William), *Public Library Reform*, 5/ net.

Political Economy.

Dodd (Agnes F.), *History of Money in the British Empire and the United States*, 5/ net.

History and Biography.

Callender (G. A. R.), *Sea Kings of Britain: Keppel to Nelson*, 3/6

With 17 maps and plans.

Diocesis Lincolnensis, *Rotuli Roberti Grosseteste, Pars Secunda*.

Issued by the Canterbury and York Society.

Gibbon (John Murray), *Scots in Canada: a History of the Settlement of the Dominion from the Earliest Days to the Present Time*, 1/ net.

With 12 illustrations by C. C. Cuneo and C. M. Sheldon.

Round (J. Horace), *The King's Serjeants and Officers of State with their Coronation Services*, 12/6 net.

Geography and Travel.

Cambridge County Geographies: *Aberdeenshire*, by Alexander Mackie; *Huntingdonshire*, by the Rev. W. M. Noble; and *Worcestershire*, by Leonard J. Willis, 1/6 each.

All contain maps, diagrams, and illustrations.

Harper (Charles G.), *'The Autocar' Road Book: Vol. II. North and South Wales and West Midlands*, 7/6 net.

Howard (Keble), *'Chicot' in America*, 1/ net.

A running story of visits to New York, Boston, and many other places, returning by way of Portland, Seattle, Vancouver, Winnipeg, and Toronto.

Moreland (A. Maud), *Through South Westland: a Journey to the Haast and Mount Aspiring, New Zealand*, 7/6 net.

With 48 plates from photographs.

Willson (Beckles), *Nova Scotia: the Province that has been Passed By*, 10/6 net.

With numerous illustrations.

Philology.

Burch (George J.), *The Pronunciation of English by Foreigners*, 3/ net.

Concise Oxford Dictionary of Current English, 3/6 net.

Adapted by H. W. and F. G. Fowler from the Oxford Dictionary.

Günther (J. H. A.), *A Manual of English Pronunciation and Grammar for the Use of Dutch Students*, 7/6

Revised edition.

Nicholson (Reynold A.), *Elementary Arabic*, a Series planned by Frederic du Pre Thornton: *Third Reading Book*, 6/ net.

Forms Vol. IV. of Thornton's Arabic Series.

School-Books.

Barnard (H. Clive), *Europe in Pictures*, 1/6

Contains 57 illustrations, 32 of which are in colour, and 4 maps.

Dumas, *La Tulipe Noire: Notes de Hardress O'Grady*, 2/

In Dent's Modern Language Series.

Science.

Barrett-Hamilton (Gerald E. H.), *A History of British Mammals*, Part VII., 2/6 net.

Blount (Bertram) and Bloxom (A. G.), *Chemistry for Engineers and Manufacturers: Vol. II. Chemistry of Manufacturing Processes*, 16/

British Bird Book, Section V., 10/6 net.

For notice of Sections III. and IV. see *Athen.*, May 27, p. 604.

Cambridge Manuals of Science and Literature: *Aerial Locomotion*, by E. H. Harper and Allan Ferguson, with an Introduction by G. H. Bryan; and *Electricity in Locomotion: an Account of its Mechanism, its Achievements, and its Prospects*, by Adam Gowans Whyte, 1/ net each.

Geological Survey of India, *Records*, Vol. XLI. Part II., 1 rupee.

Geological Survey, Scotland: *Description of Arthur's Seat Volcano*, by B. N. Peach, 6d.

Hurst (Charles), *The Book of the English Oak*, 5/ net.

A monograph on the oak, its associations, tradition, influences, &c., with a map of English oaks and 14 illustrations from photographs.

Littlejohn (Arthur P.), *Meat and its Inspection: a Practical Guide*, 10/6 net.

Livingstone College Year-Book, 1911, 6d.

The Year-Book contains an appeal for the consideration of Imperial health problems. The enormous mortality from malaria and plague, not to speak of other diseases in India and other tropical dependencies of Great Britain, is pointed out, and it is contended that the horror of these great scourges has not been adequately realized. There is also a review of literature on the subject of Tropical Medicine and Hygiene.

O'Reilly (B. R.), *A Manual of Physical Diagnosis*, 8/6 net.

Pfungst (Oskar), *Clever Hans (the Horse of Mr. von Osten): a Contribution to Experimental Animal and Human Psychology*, 6/ net.

With an introduction by Prof. C. Stumpf and 16 illustrations. Translated by Carl L. Rahn, with a prefatory note by James R. Angell, both of the University of Chicago.

Present-Day Gardening: *Apples and Pears*, by George Bunyard; and *Lilies*, by A. Grove, 1/6 net each.

Each contains 8 coloured plates.

Ross (Edward Halford), *The Reduction of Domestic Mosquitoes: Instructions for the Use of Municipalities, Town Councils, Health Officers, Sanitary Inspectors, and Residents in Warm Climates*, 5/ net.

With 18 illustrations.

Sedgwick (Rev. S. N.), *Butterflies and How to Identify Them*, 1/ net.

With 35 illustrations.

Thorpe (Sir Edward), *Essays in Historical Chemistry*, 12/ net.

Third edition.

United States National Museum: 1831, *New Tropical Millipeds of the Order Merocheta*, with an Example of Kinetic Evolution, by O. F. Cook; 1833, *On the Supposed Origin of the Moldavites and like Sporadic Glasses from Various Sources*, by George P. Merrill; 1835, *The Relation of Bornite and Chalcocite in the Copper Ores of the Virgilina District of North Carolina and Virginia*, by Francis Baker Laney; 1838, *Preliminary Notices of some New Pacific Cephalopods*, by S. Stillman Berry; 1840, *A Revision of the Forms of the Hairy Woodpecker (Dryobates villosus, Linnaeus)*, by Harry C. Oberholser; 1841, *Description of a New Species of Aega from the Atlantic Coast of the United States*, by Harriet Richardson.

Walker (A. Horace), *The Inspection of Fish, Poultry, Game, Fruit, Nuts, and Vegetables*, 5/ net.

Wicherley (W.), *The Whole Art of Rubber-Growing*, 5/ net.

Wright (F. Frederick), *The Ice Age in North America and its Bearings upon the Antiquity of Man*, 20/ net.

Fifth edition, with many new maps and illustrations, enlarged and rewritten to bring it up to date, with chapters on Lake Agassiz and the Probable Cause of Glaciation, by Warren Upham.

Fiction.

Albanesi (Madame), *A Wonder of Love*.

One of Stanley Paul's Clear Type Sixpenny Novels.

Horn (Kate), *The Coronation of George King*, 1/ net.

A Lincolnshire idyll.

Porter (T. H.), *A Maid of the Malverns: a Romance of the Blackfriars Theatre*, 6/

An historical novel introducing Ben Jonson and contemporary characters.

Queen Flora's Recollections, 6/

Purports to be a record of the events preceding the restoration of the monarchy in 1998.

Stewart (Edith Anne), *Love—and the People*, 6/

A study of the motive and methods of social reformers, combined with a love-story. The heroine sacrifices money and position in order to marry a working-man, who, owing to poverty, naturally takes far too materialistic and selfish a view of socialism.

Thackeray Centenary Biographical Edition: *The Virginians*, 2 vols, 6/ net each.

General Literature.

American Year-Book: a Record of Events and Progress, 1910, 15/ net.

Edited by S. N. D. North, under direction of a Supervisory Board representing National Learned Societies.

Hueffer (Ford Madox), *This Monstrous Regiment of Women*, 6d.

The author sets out to prove that in England it has been profitable to have women occupying the highest place in the State.

Milton's *Areopagitica*, Édition de Luxe, 10/ net.

Pancoast (Henry S.) and Shelly (Percy van Dyke), *A First Book in English Literature*, 5/ net.

With nearly 50 illustrations and maps.

Parisiana: Summer Annual, by Rougie, 1/ net.

With many illustrations.

Skinner (Thomas), *The London Banks and Kindred Companies and Firms, 1911-12*, 10/ net.

FOREIGN.

Philosophy.

Dorner (A.), *Pessimismus, Nietzsche u. Naturalismus m. besond. Beziehung auf die Religion*, 6m.

History and Biography.

Loiseau (H.), *L'Évolution Morale de Goethe, les années de libre formation, 1749-94*, 15fr.

Forms part of the *Bibliothèque de Philologie et de Littérature Modernes*.

Philology.

Euripides, *Ion*, oversat af Thor Lange, 1kr. 40.

No. 85 of *Studier fra Sprog- og Oldtidsforskning*.

* * All books received at the Office up to Wednesday Morning will be included in this List unless previously noted. Publishers are requested to state prices when sending books.

Literary Gossip.

OUR readers may be glad to have a few references to notable accounts of former Coronations. Freeman in his 'History of the Norman Conquest' gives a graphic description of the Coronation of Harold. Hoveden is minute and interesting on Richard I., Froissart on Henry IV. A most lively narrative is that of Degli Effetti, an accomplished Roman who witnessed the Coronation of James I. Of Charles II.'s Coronation the most minute record is Sir Edward Walker's 'Circumstantial Account,' the most amusing Popys's.

WALPOLE in his 'Lettors' is entertaining on the hallowing of George III., while the George IV. solemnity is recorded in the monumental illustrated tome of Sir George Naylor, on which the projector lost money. It was published at 50 guineas. He also began, but never completed, an edition with "tinselled" pictures (Stevenson's "Skeltery"), in which silk, gold, and jewels were to be used.

A few plates were made, and sold at 50 guineas each. Sir Walter Scott supplies a classic account of the George IV. banquet. Greville and Macaulay may be consulted for William IV. Macaulay's letter (Sept. 9, 1831) is brief but vivid. Lady Bloomfield's 'Reminiscences' (i. 15) and Greville deal with the Victorian celebration. Of Edward VII.'s Coronation, apart from books, perhaps the best account was that of Mr. Charles Lowe in *The Daily Chronicle*.

THE long list of Coronation honours pays, we are glad to note, more attention than usual to scholarship and literature. Lord Rosebery, whose books are all too few, becomes the Earl of Midlothian. Sir William Anson, Sir Frederick Pollock, and Sir John Rhys become Privy Counsellors; and Sir George Trevelyan receives in the Order of Merit a tribute to his long and varied service to letters. Among the new Knights are Vice-Chancellor Dale of Liverpool, Dr. Sidney Lee, Mr. W. S. McCormick, Dr. J. E. Sandys, and Prof. Walter Raleigh.

THE last-named fine scholar has doubtless anticipated, as Walter Scott did, Falstaff's comment: "I like not such grinning honour as Sir Walter hath."

PART VIII. of the 'Oxyrhynchus Papyri' is expected to make its appearance towards the end of this month. The chief literary novelties this year are some fragments of the 'Melambi' of the Cynic Cercidas, pieces of an unidentified Satyric drama, and some valuable Homeric scholia.

PLEASURABLE anticipations are aroused by the announcement that Mr. Max Beerbohm has written a novel of Oxford life, for University stories, whether fantastic or intended to be veracious records of the life that few outsiders can realize, are rare.

THE publication of a facsimile of the Ellesmere Chaucer in two volumes by the Manchester University Press is a notable event. The MS. itself is one of the best authorities for the text, being in a fifteenth century hand; and the fine illuminations are well worth the special care which has been devoted to the reproduction allowed by the kindness of Lord Ellesmere.

MISS TUCKWELL, the niece and literary executor of Sir Charles Dilke, asks us to state that she will be grateful if friends who possess letters or reminiscences of her uncle will communicate with her at 52, Westminster Mansions, S.W. Letters will be carefully copied and returned. The papers and diaries of Sir Charles are being examined with a view to eventual publication of the Life, which will be issued by Mr. John Murray.

MESSRS. SOTHERAN & Co. have on view at their West-End house in Piccadilly a remarkable exhibition of fine bindings and rare books, including a copy of FitzGerald's 'Omar' illustrated by Mr. E. H. Vedder, magnificently bound, and studded with 1,050 jewels set in gold. There are also other books extra-illustrated in lavish style.

THE Library of Trinity College, Dublin, will be closed from July 8th to 23rd inclusive.

A COPY of the rare first edition of Carlyle's 'Sartor Resartus' has been discovered in the library of the late Mr. Lattimer of Carlisle. It bears an inscription from the author. Only about fifty copies were made up of this unique edition from the pages of *Fraser's Magazine* in 1834, and distributed amongst friends.

THE fourth Erewhon Dinner will take place at Pagan's Restaurant on Friday, July 14th.

THERE will be a private view next Wednesday of the Thackeray Exhibition arranged by the Titmarsh Club at the old Charterhouse. Lord Rosebery will open the exhibition on Friday, the 30th. It will be on view every day until, and including, Saturday, July 15th.

SIR THEODORE MARTIN's library, which Messrs. Sotheby will sell on Wednesday and Thursday in next week, contains a good many interesting souvenirs of both him and his wife (Helen Faucit), including some presentation copies of books. One of the most desirable of these is a copy of Victor Hugo's 'Notre Dame de Paris,' 1844, with the inscription, "A Miss Faucit, souvenir du 25 Janvier, 1849. Victor Hugo." The presentation copies of Thackeray's works are likely to excite a good deal of interest.

WE notice that women maintain their pre-eminence in the results of the Mediæval and Modern Languages Tripos published last Saturday at Cambridge, securing twelve first classes against the eight awarded to men.

WOODHALL SPA is celebrating its centenary by a Pageant of Lincolnshire History on July 26th and 27th. The episodes will include a scene of Druidical worship, a foray by the Danes, the death of King John at the Abbey of Swineshead, the King's Champion at the Coronation of James I., and A Dream of Fair Women, adapted from Tennyson.

THE death is announced at Aberdeen of Mrs. Mary Gray Garden, youngest daughter of James Hogg. Mrs. Garden prepared 'Memorials of the Ettrick Shepherd,' of which a third edition appeared in 1893, with additions and corrections, and possessed a fine portrait of her father, painted by James Scott for Allan Cunningham, as well as original manuscripts of his work.

MUCH regret is felt in Bonn for the premature death of Prof. Felix Solmsen, who was killed by a fall from a train. Prof. Solmsen, who was in his 46th year, studied philology at Berlin, Halle, and Leipsic, and in 1897 was appointed Professor of Indogermanic Languages at Bonn, where the great range of his knowledge and his gifts as a lecturer soon made his reputation. Among his works are 'Inscriptiones Græcæ Selectæ' and 'Beiträge zur griechischen Wortforschung.'

SCIENCE

OUR LIBRARY TABLE.

NATURE is wonderfully tolerant of hardships inflicted upon those organs of the animal body upon which the life of the species depends; but if the half of what Mr. Upton Sinclair alleges in *The Fasting Cure* (Heinemann) is true, she is approaching her limit as regards the nervous and the digestive systems of the citizens of the United States. Bad cooking, improper diet, and the difficulties of domestic service are threatening to convert large numbers of the people into constipated neurasthenics. As a cure for this Mr. Sinclair takes no statesmanlike view, nor does he go to the root of the matter. He considers only the individual, whom he treats by fasting with abundance of water and repeated enemata. He writes as an enthusiast, but without the knowledge which should temper his zeal with discretion. He thinks that because fasting and unloading the bowels lessen the tendency to colds and gout, they are therefore a suitable means of curing cancer and syphilis. The general tone of the book is uncritical and regrettably unscientific. Incidentally it shows how widely the American language, as Mr. Sinclair writes it, is deviating from English even as it is used in the newspapers of this country. Many of his sentences are unintelligible to the present reviewer; some of the phrases seem to be archaic, though they are used to express modern ideas.

Criminal Man, according to the Classification of Cesare Lombroso. Briefly summarized by his Daughter, Gina Lombroso Ferrero. With an Introduction by Cesare Lombroso. (Putnam's Sons.)—This volume provides a short but accurate account of the views of Prof. Cesare Lombroso, well known as an advanced thinker concerning the factors which make criminals as well as the best methods of dealing with them. The Introduction was the last piece of literary work done by Lombroso, whilst the work itself is written by his daughter Gina and was supervised by her father. It represents, therefore, Lombroso's latest views on the subjects to which he devoted his life. There is little doubt that his main contentions are accurate, and that the born criminal is often an abnormal being who is driven by atavistic impulses to anti-social acts. There is equally little doubt that many of Lombroso's details and conclusions will need modification, obliteration, or rearrangement as our knowledge of the subject becomes more extensive and the data more numerous. It is certain, for instance, that what is true of South European criminals does not hold good for those of more northern climates; yet the drawing of public attention to the criminal and the gradual alteration of the standpoint from which he is regarded have already done much good both to himself and his offspring. The book concludes with a clever résumé of the different works published by Prof. Lombroso.

Life and Death, by A. Dastre, translated by W. J. Greenstreet (Walter Scott Publishing Company), is a learned and impartial criticism of recent research written from the standpoint of the physiologist. The questions what life is, and what death is, have

recently been much discussed. Are they *sui generis*, or simply the response of matter to the controlling influence of physico-chemical laws? Prof. Dastre, of set purpose, avoids speculation; he is content to place before the reader facts, and their interpretation so far as it has been rendered ascertainable by experiment. Hence his conclusions are somewhat indefinite; he does not profess to offer a solution of the riddle of life, but he demonstrates plainly how patient research is confining the surmises of philosophy within narrower bounds. On the other hand, he encourages no vain hopes that science will eventually be able to explain the whole enigma of life. It must always be incomprehensible, for instance, how from the correlated action of certain atoms of carbon, hydrogen, nitrogen, and oxygen in the molecule of protoplasm the mystery of consciousness is evolved.

The author discusses fully the philosophical theories of animism, vitalism, and monism, one or other of which has in turn dominated scientific opinion. He believes this domination has ceased to exist, that Physiology has emancipated herself; but he does not dispute the force of Armand Gautier's remark that "real science can affirm nothing, but it also can deny nothing outside observable facts." Prof. Dastre concedes that there may be in living organisms other forms of energy than those known in the physical world. He classes these under the term "vital energy," but the evidence for their existence as a separate entity is not convincing. Vital energy, he says, "is a transformation of chemical energy into thermal energy." This is certainly not always the case: the author admits that such a statement is not strictly applicable to growth in the vegetable kingdom, and similar transformations take place in inanimate nature where no vital factor is postulated.

As to death, Prof. Dastre recognizes the virtual immortality of the protozoon, and rightly considers that the appearance of death in the world was synchronous with that of sexual reproduction. But in multicellular organisms also we may, with Weismann, concede a kind of immortality to the germ-cell. The somatic cells which enshrine it are an excrescence produced for its own needs; when these are accomplished, when the germ has come to fruition and passed a portion of its substance onwards to another generation, its covering, no longer required, dies. But though invested with a new soma, the germ still lives. The death of the individual is inevitable, but the author thinks, with Metchnikoff, that in man senescence comes before its time, and that an improved hygiene might postpone it. Death would then be welcome. Man should die without regret, like the patriarchs, "old and full of days."

The translation of a book of this character is no easy task, and Mr. Greenstreet may be congratulated upon his success. We do not, however, like the term "conjunctive tissue" which he uses in place of "connective tissue."

British and Foreign Building Stones: a Descriptive Catalogue of the Specimens in the Sedgwick Museum, Cambridge. By John Watson. (Cambridge University Press.)—A large and representative collection of building stones has grown up of late years in the Economic Section of the Sedgwick Museum at Cambridge, under Prof. McKenny Hughes. The present work is a catalogue of this collection by Mr. John Watson, who has been largely instrumental, we believe, in obtaining the specimens, and

has in many cases visited the localities whence they were derived. Although modestly termed a Catalogue, the work is much more than such a title implies; indeed, the inventory itself forms only the latter half of the volume, the first moiety consisting of descriptive matter under the designation of Notes. As these introductory notes deal briefly with most of the building stones of the world, and include references to original authorities, they form a useful guide to the student of economic geology.

In the arrangement of the collection the British stones are separated from the Colonial and Foreign; and in each department the specimens, mostly worked into cubic form, are classified as igneous, metamorphic, and sedimentary rocks. The sedimentary series is subdivided, not according to lithological characters, as is commonly the case in such collections, but according to stratigraphical sequence—a method obviously to be recommended in a collection intended primarily for the use of geological students: indeed, the builder would probably be surprised to find in a venerable centre of culture so remarkable an assortment of the most important materials of his craft. It may be noted that, whenever possible, mention is made of the typical buildings in which the several stones have been employed, with the date of their erection, attention being specially given to buildings in and around Cambridge. Not the least valuable feature of the Catalogue is the fact that the nomenclature of the igneous rocks may be accepted as authoritative, as it has been under the care of so distinguished a petrologist as Mr. A. Harker. The work is furnished with an exceptionally full Index.

SOCIETIES.

BRITISH ACADEMY.—June 7.—Dr. A. W. Ward in the chair.

Prof. Percy Gardner, Fellow of the Academy, read a paper on 'The Earliest Coins of Greece Proper.' The first question which arises is whether the earliest coins of Hellas were of electrum. Electrum coins have been attributed to Thrace, Ægina, and Eubœa; but in every case the attribution is improbable, and an Asiatic origin more likely. The tradition ascribing the first issue of coins at Ægina to Pheidon must be considered. The date of Pheidon may be fixed as the eighth century B.C. But this is too early for the issue of coins; nor did Ægina belong to Pheidon. Pheidon regulated the weights and measures of Peloponnese: these are of doubtful, possibly Mycenaean, origin. It was on the standard of Pheidon that the Æginetans first issued silver coins as substitutes for the bars of bronze and iron which had made up the earlier currency of Peloponnese. These bars were dedicated at Argos, and some survive. The proportions of value were, iron 1, bronze 5, silver 600, so that a silver obol of 16 grains was equivalent to 20 drachms of bronze or a mina of iron. The obol, the drachm, and the talent made up a system proper to Greece; the mina of 100 drachms was interpolated. The origin of the didrachm and the double talent was considered.

The cities of Eubœa issued money in the seventh century on the gold standard of Babylon, which they regulated according to the scheme of Pheidon. Their coins were uniform with those of Athens, and perhaps of Megara, bearing one type only.

The Corinthians began as early as the time of Cypselus the issue of coins, which were often restruck in Italy. They divided the Euboic stater into 3, a fact which gives us valuable data in regard to the spread of Corinthian commerce.

The earliest coins of Athens bore as types the owl and the amphora. They were introduced by Solon. The accounts by Aristotle and by Androtion of Solon's legislation were to be reconciled. Solon's alteration of measures, and cutting down of debts, were both done from democratic motives. Solon adopted the Euboic standard for coin, which was raised to the level later called Attic by Pisistratus, who first struck the tetradrachms with the head of Athena. The result was the

foundation of Athenian commerce, and the victory of the Athenian silver coinage, to the weight of which Corinth, Eretria, and other cities were obliged to conform. Prof. Gardner finally considered the wide circulation of Athenian coins and the barbarous copies made of them.

Mr. Reginald Poole, Fellow of the Academy, communicated a paper on the life and work of the late M. Delisle, Corresponding Fellow of the Academy.

ASIATIC.—June 13.—Sir Mortimer Durand, Director, in the chair.

Dr. Keith, in a paper on 'The Vedic Akhyāna and the Indian Drama,' discussed the question of the purpose of the dialogue hymns found in the Rigveda, which, unlike the great mass of the hymns of that collection, seem to have no natural place in the ritual. There are at present two main theories in the field—that of Prof. Oldenberg, which asserts that the dialogues are the remains of a literary genus which has disappeared in its original form, which consisted of verses in a prose setting, the verses marking the points of increased interest in the narrative; and that, newly expounded by Prof. von Schroeder and Dr. Hertel, which sees in the dialogues dramas in miniature. Against Prof. Oldenberg's theory the objections were urged that Indian tradition recognized no such literary type as that postulated, that the alleged cases of its occurrence in the Brahmana literature were to be explained otherwise, that it was impossible to account for the supposed loss of the prose, and that the hymns could be well explained without assuming any connecting prose passages. On the other hand, it was pointed out that the evidence for ritual drama was very weak: much of it merely showed, even if the interpretations put on the hymns by Prof. von Schroeder were accepted, the existence of a dramatic ritual; and the step from dramatic ritual to drama, from presentation to representation, was long and difficult. There was no sufficient ground to assume that in Vedic India the step was ever taken, and the suggestion was made that this fact stood in some connexion with the slight attention which the Hindu of the Rigvedic period of culture seems to have paid to that aspect of religion which is represented by practices concerned with the vegetation spirit. There was evidence that the later Indian drama derived its origin from a mimetic representation of the conflict of the spirits of spring and winter, and attention was called to the close parallel in this regard offered by the theory of the origin of the Greek drama adopted and defended by Dr. Farnell in his 'Cults of the Greek States.'

A discussion followed, in which Prof. Barnett and Dr. F. W. Thomas took part.

METEOROLOGICAL.—June 14.—Dr. H. N. Dickson, President, in the chair.—Dr. C. Chree read a paper giving the results of a discussion of the barograph records kept by the late Mr. R. Bell at Castle O'er, Dumfriesshire, during the seven years 1902 to 1908. These results show a well-marked principal maximum and minimum, at 10 P.M. and 5 A.M. respectively. Every year agrees in this except 1908, which puts the maximum at 7 A.M.—Mr. Spencer C. Russell gave an account of a number of experiments which he had carried out at Epsom during the last two years, in order to obtain a permanent record of the variations in the size of raindrops.—A joint paper by Mr. A. J. Makower, Dr. W. Makower, Mr. W. M. Gregory, and Mr. H. Robinson was read, describing the experiments which they carried out last August at Ditcham Park, near Petersfield in Hampshire, to investigate the electrical state of the air at different heights above the ground by means of kites and balloons.

MEETINGS NEXT WEEK.

Mon. Institute of British Architects, 8.30. — Presentation of Royal Gold Medal.
Tues. Zoological, 8.30.
Wed. Folk-lore, 8.—'Some Old English Folk-lore Survivals in Modern Britain,' Mr. W. W. Skeat.
— Microscopical, 8.—'On the Structure of Scales from *Therapsia domestica*,' and 'A Description of a Model producing an Optical Effect similar to the Concave Markings in Insect Scales,' Mr. J. Strachan; 'Rotifera of New Zealand and South Africa,' Mr. J. Murray.
— Antiquaries, 8.30.
Thurs. Royal, 4.30.—'On a New Method of Estimating the Aperture of Stomata,' Mr. Francis Darwin and Miss D. F. M. Pertz; 'Memoir on the Theory of the Partitions of Numbers,' Part VI., Major P. A. MacMahon; 'The Kinetic Theory of a Gas constituted of Spherically Symmetrical Molecules,' Mr. S. Chapman and other Papers.

Science Gossip.

WE congratulate Prof. R. P. Wright, Mr. C. A. Parsons, and Major Ronald Ross on the Knighthoods which record their varied services to science.

THE Final Report of the Committee of Inquiry on Grouse Disease, of which Lord Lovat is chairman, will be published, it is hoped, before the 12th of August by Messrs. Smith & Elder. The Report, which represents a great deal of careful investigation, will be entitled 'The Grouse in Health and in Disease,' and will be in two volumes, handsomely illustrated with numerous coloured plates.

AMONGST the topics dealt with are 'Moor and Stock Management' and 'Heather Burning,' by Lord Lovat, whilst other questions are treated by Mr. A. S. Leslie, Secretary to the Inquiry, and Dr. E. A. Wilson, now in the Antarctic. The scientific details of the diseases of grouse are described by Dr. L. Cobbett, Dr. G. S. Graham Smith, Dr. A. E. Shipley, Dr. R. T. Leiper, and other writers.

MR. W. P. PYCRAFT has written, and Mr. Edwin Noble illustrated in colours, a companion volume to the 'Animal Why Book,' entitled 'Pads, Paws, and Claws,' which will be published by Messrs. Wells Gardner in the autumn.

MESSRS. J. & A. CHURCHILL of 7, Great Marlborough Street, W., will publish early next year a 'Who's Who in Science,' edited by Mr. H. H. Stephenson. The record is to be international in character, including the leading men of science in every country which has an established University.

THE results of Part I. of the Natural Science Tripos at Cambridge show this year, as they did last, far more first classes than any other Tripos, no fewer than fifty-six candidates having reached that position.

Two more small planets were photographically discovered by Mr. H. E. Wood, Chief Assistant at the Transvaal Observatory, Johannesburg, on April 22nd. One of these is identical with that found at Heidelberg on the 22nd ult., as mentioned in our Science Gossip last week.

FINE ARTS

OUR LIBRARY TABLE.

Historia Numorum: a Manual of Greek Numismatics. New and Enlarged Edition. By Barclay V. Head, assisted by G. F. Hill, George Macdonald, and W. Wroth. (Oxford, Clarendon Press.)—The great repute in which this work has been held since its first issue, now twenty-five years ago, as the one text-book on Greek coins, fully justifies a new edition, if any justification is necessary. The original work was a very courageous attempt, for not only was it a compendium of the coinages of the whole Greek world, but its aim also was to place such coinages in their chronological order under the districts and towns in which they were struck. It was the latter feature which marked the work as in the highest degree exceptional, and it was a task which could only be accomplished by one who was a thorough master, not only

of Greek numismatics, but also of history, archæology, and style.

During the last twenty-five years an enormous amount of material in Greek numismatics has been produced. The Catalogue of Greek Coins in the British Museum had not reached the coinages of Asia, but now it is near completion, and has arrived at its twenty-seventh volume. For these numerous Asiatic series no one special work of reference has been produced since the time of Eckhel. Babelon has published his 'Rois de Syrie,' his 'Perses Achéménides,' and his 'Traité': Imhoof Blumer has given to the world his 'Griechische Münzen' and 'Kleinasiatische Münzen'; and Dr. Macdonald his suggestive and illuminating work on 'Coin Types.' Besides these and numerous other works, several volumes of the great Berlin 'Corpus' have been published. Dr. Head in his preface modestly admits that

"had so vast an accumulation of numismatic literature, both popular and scientific, been accessible in 1883, when I began the compilation of the original work (though even then it was very considerable), I doubt whether I should have had the courage to face the task single-handed."

We appreciate Dr. Head's feelings; but we consider that it was a far greater feat to accomplish the work single-handed, and so successfully, at a time when so much less material was available to guide and help him.

To a certain degree Dr. Head appears to have retained this feeling in the revision of his great work; for with him have been associated two of his former colleagues in the Museum: Mr. Wroth, now Assistant-Keeper of Coins, and Mr. Hill, who has proved a worthy disciple of his former chief. To them has been added Dr. George Macdonald, the author of the Catalogue of Greek Coins in the Hunterian Collection, a work which, like the present one, covers the whole field of Greek numismatics. No doubt, with their help, the new edition of the 'Historia' has appeared more quickly than otherwise would have been the case; but even their assistance has been mainly limited to the second half of the volume, which deals with the coinages of Asia.

It is impossible within the narrow limits of this notice to attempt to show even a particle of the great labour which has been expended on the revision. Not only does the coinage of each district demand a special study, but also in very many cases that of a single city. The magnitude of the work becomes at once apparent, and also the difficulty of compressing so much material within a limited space. Throughout the dating of the issues of the different series has undergone considerable modifications. A closer study than was possible in the first instance has shed new light, yet in the main the classification originally adopted has been preserved.

In the Introduction the chapter on 'Metrology' has undergone a good deal of revision, and this intricate subject has been put forward in a clearer and more intelligible form to those who are not so deeply versed in it as the author. In the first edition, for instance, it was difficult to get a grasp of the metric systems of the Babylonians, the Lydians, and the Phœnicians. We were somewhat lost in the account of the trade routes. Much of this is now omitted, and its place is supplied by a lucid account of the metrical system of the Babylonians and a summary of those of the other principal Asiatic States, based on the Babylonian, which can be taken in at a glance. In the case of the types of the coins, the "religious theory" has been considerably modified, and the "commercial theory" emphasized.

This is mostly due to the recent appearance of two important works, viz., Prof. Ridgeway's 'Origin of Currency and Weight Standards' and Dr. Macdonald's 'Coin Types.' The former interpreted many of the types on the coins as representing "some animal, natural product, or utensil which, before the introduction of money, had served as a medium of exchange or barter-unit with a recognized local value." For example, the ox on the gold coins represented that animal as a barter-unit; the tunny on the coins of Cyzicus a certain number of these fish; and the tortoise on the coins of Ægina the value of its shell, &c. Dr. Macdonald has controverted many of these identifications, and treats such types and many others as the arms or symbol of the city or district in which the coins were struck; and he lays greater stress on the signets of the magistrates of the mints which, in some cases, like those of Cyzicus and Lampsacus, put the type of the city in a secondary position. This is a subject which will no doubt receive more attention, as it opens up a wide field of research, and speculation.

In revising the coinages of European Greece, Dr. Head has taken note of all the latest views and theories, though in some instances he may not have endorsed them. In dealing with the *æs grave* of Italy he has accepted Dr. Haeberlin's classification, though he admits that it is "largely hypothetical." Whether or not this new system of classification will be lasting we cannot at present say. It has, like many that have preceded it, its weak points, as it is founded much on conjecture. It will probably hold the field, as Mommsen's has hitherto done, until it is superseded by something better.

Other series which have undergone careful revision are those of Tarentum (which is due to Dr. Evans's late researches), Byzantium, Athens, and Elis, principally in the dating of the issues. In the list of the artists whose names or signatures occur on the Syracusan coins of the "fine-period" we note that the name of Cimon, the greatest of all, has been omitted. This is, no doubt, an oversight. Also the old description of the remarkable coin of Elis with the head of an eagle on the obverse and a winged thunderbolt on the reverse (p. 421) should have remained. The inscription on (not beneath) the ivy leaf is ΔΑ, not ΑΑ or ΠΟ, as proved by a specimen in the collection of Dr. Evans (see *Num. Chron.*, 1910, *Proceedings*, p. 15). This confirms Prof. Gardner's original attribution that the coin is the work of Dædalus of Sicily. We are also not prepared to accept Dr. Head's attribution of the gold staters (or aurei) hitherto attributed to L. Junius Brutus as having been struck by him in Thrace to a Scythian king "Coston." It does not seem probable that this king, if his name be ΚΟΣΩΝ, would have adopted the type of a Roman denarius which was issued only a few years before, and which, so far as he was concerned, had no special significance to himself. Appian's testimony is far too strong when he says that "Brutus struck coins from the treasures consigned to him by Polemocratia, the widow of a Thracian dynast." But these are minor points.

The production of the more recent volumes of the Catalogue of Greek Coins in the British Museum has subjected the coinages of Asiatic Greece to severe criticism; and the fruits of the labours of the compilers are shown in the revision of the second half of the 'Historia.' The coinages of this section are, however, mainly imperial or autonomous bronze pieces of a late date which fall naturally into order. Their chief interest is centred in their reverse types, which illustrate the local mythology. A

great modification has been made in the attribution of the large series of electrum coins, and it may now be considered that the localities of their issue have been ascertained with a fair amount of certainty. For particulars of these we must refer the student and the collector to the work itself.

Dr. Head's coadjutors have brought to bear their special knowledge on the coinages of the various districts with which they are most intimate. Mr. Hill has dealt with the difficult series of Lycia, Cyprus, Phoenicia, Palestine, &c.; Mr. Wroth with those of Crete, the Ægean Islands, Pontus, Mysia, Troas, &c.; and Dr. Macdonald with those of the Seleucidæ and Ptolemies, of which series he has made a special study. We would venture on only one remark, which is that in the case of some districts, like Crete, Troas, and Lesbos, the pruning-knife has been used a little too severely, and much of the information which was useful to the student and the collector in the first edition has been deleted. No doubt this was due, as perhaps also the omission of the chronological tables, to reasons of space; for as it stands, the revised edition has exceeded the original by over one hundred and fifty pages. This, however, does not materially affect the general usefulness and value of the work, and we congratulate Dr. Head on having successfully carried out his arduous task. It is satisfactory to know that, though he has retired from the public service, his interest in his lifelong study, of which this volume is a lasting memorial, is undiminished. It is the monument of a brilliant numismatic career.

Modern Copper Coins of the Muhammadan States of Turkey, Persia, Egypt, Afghanistan, Morocco, Tripoli, Tunis, &c. By W. H. Valentine. (Spink & Co.)—This unpretentious little volume, with drawings and descriptions of over eleven hundred, chiefly modern, copper coins of the Mohammedan countries of Europe, Africa, and Asia, will be very serviceable to those who collect such coins. The Arabic and Persian copper currency is so uninteresting and (from the circumstance of constant friction) so often illegible, in comparison with the gold and silver, that it has been the neglected Cinderella of Oriental numismatists; and though they have usually described such specimens as were decipherable, they have seldom illustrated them, since photographic reproduction would rarely bring out the coarse and rubbed inscriptions.

Mr. Valentine has both written his text and drawn his illustrations, every coin described being also drawn, and has reproduced the whole by lithography. He has done it very carefully, but the plan has its disadvantage as well as its merit. The merit is that a defaced copper coin can be drawn much more clearly than it can be photographed; the disadvantage, that there is no means of telling how far the draughtsman, who is also the describer, has unconsciously perverted the drawing to fit the description. We do not doubt that Mr. Valentine has been scrupulously conscientious, but the most careful observers are liable to see what they wish, and, having seen it, to draw it. We should be inclined to contest a certain number of the readings of obscure inscriptions here given, but the drawings are naturally witnesses for the defence, and it is impossible to check their evidence without comparing them with the coins. Fortunately Mr. Valentine had trustworthy guides in the British Museum catalogues of Persian and Ottoman coins, and these helped him to describe other specimens which do not occur in them. Apart from slips

in writing, which are almost inevitable in lithographed books, there are mistakes in the transcription of the Arabic; but this is natural, since Mr. Valentine makes no pretence to scholarship. The name of the Sultan of Masqat is wrongly spelt; and the mysterious "jamad khur" of No. 8, p. 86, is simply the name of a month. The mint of No. 69, p. 18, is certainly not Amid, which is never spelt Amid. The lists of Sultans and Shahs and other rulers, largely adapted from the British Museum catalogues, will be useful to collectors who do not possess those volumes, long out of print; and there is some utility in the historical sketches prefixed to each section, though the statement that they have been sometimes abridged from the 'Oracle Encyclopedia' does not carry absolute conviction. There are maps and indexes; in short, this little book has been prepared in a thoughtful and painstaking way.

Le Morte Darthur: the Book of King Arthur and of his Noble Knights of the Round Table. Vol. II. (P. Lee Warner.)—The second volume of this publication maintains the high standard of the first. This said, the chief interest of the reader is to learn how Mr. Flint has acquitted himself in his emprise of translating Malory into colour. It has chanced that much of this volume is devoted to the story of Tristram and Iseult, and the illustrator has thus been brought into competition with a number of artists of recent years. Let us say at once that he has distinguished himself honourably. The love-potion scene, of which each man has his own conception, is adequate, and well within the character of Iseult as Mr. Flint sees her, and the combats and armour are convincing. The garden scene is a triumph of reproduction. The drawing of Iseult learning the harp is, we think, a little weak in composition. The reproduction by the Medici process needs no praise. Its only difficulty is the almost inevitable darkening of tone when a water-colour drawing is reproduced by oil colours.

JOHANNES BOSBOOM AND WILLIAM MARIS AT THE FRENCH GALLERY.

BOTH the artists represented in Pall Mall may without injustice be described as "picture-dealers' painters," but the sound training of Bosboom dates from a time when respectability was accounted a virtue in the arts, and the maker of pictures was rather successful than otherwise for honestly doing his best to endow his works with qualities a purchaser might reasonably require as giving the pictures permanent interest. Bosboom was conscientious in satisfying as far as possible all reasonable demands, and was an admirable painter, if sometimes a little dull. On the whole, the water-colours here represent him better than the oil paintings. The slighter medium gives the invariable solidity of his pictorial structure an agreeable delicacy, while in oils his rather monotonously heavy painting has neither the perfect distribution of alternated impasto and transparent paint which is in itself a source of beauty, nor the monumental uniformity which belongs to the artist who definitely denies himself such obvious attractions. Nos. 5, 17, and 19 may be noticed as among the best of the collection. Even in these, perhaps, one is a little conscious of their being done on a recipe, though one which, based

on sound principles, suffices to dominate an artistic impulse sincere, but of by no means fiery intensity. There is the less difficulty in subordinating detail if interest in it is of a purely professional order.

For these reasons Bosboom, serious and dignified artist as he was, does not provoke even distant comparisons with Rembrandt, although the Preface to the Catalogue risks association of the two names. Beside the probity of Bosboom's art, however, the facility of that of William Maris looks somewhat meretricious. His technique had the fluency of certain of the Barbizon painters, but without its logic, and hence there is frequently a lack of coherence in the plastic basis of his pictures, in which we find sudden "holes" alternating with obtrusive solidity. He evidently continues the Barbizon tradition, but marks decidedly its decadence. No. 35, *The Young Brood*, is probably the best—very loose in handling, and on an unnecessarily large scale, but conceived as a whole with more authority than was usual with him, while the brilliant colour-scheme has an intimate relation with the rendering of form. No. 55 shows also a remarkable power of handling colour in a somewhat showy fashion. The good qualities of these and one or two more are watered down by the addition of a large number of examples which we should regard as no more than mediocre in an exhibition of work by living artists.

THE CAMDEN TOWN GROUP.

THIS society, whose first exhibition is at the Carfax Gallery, has been launched upon the town as representing the extreme of revolutionary modernity. Its members have thrown over all convention, we are told, and acknowledge no artistic rule, every man being a law unto himself. We are loath to do anything to deprive them of the passport to public favour that goes with the title of "art-anarchists," but as a matter of fact it is not the novelty of the art displayed that constitutes its merit. It is indeed, for the most part, new to the public only to this extent—that hitherto such work, when seen at the New English Art Club, has been shown in a rather shame-faced fashion, as though the hanging committee were somewhat doubtful of the sufficiency of its merits; so that it has been easy for the critic to ignore it, if he was at all puzzled or uncertain on that point. We have ourselves perhaps been guilty of some such procrastination in regard to the curiously reserved and objective landscapes of M. Lucien Pissarro, one of the principal members of the Group. M. Pissarro has a very personal preference in the way of subject—presumably genuine, as it would seem to be a singularly unremunerative perversity. The normal landscape painter seeks in nature some subject which enables him to express symbolically the natural human desire for continuity of idea. He loves effects in which detail is fused in a simple ensemble, or co-ordinated in broadly contrasted categories—preferences which, when weakened by the habit of thoughtless production, may degenerate into a mechanical repetition of certain stock contrasts—of warm and cold colour, of obvious light and shadow, of horizontal and upright forms, and so forth—to which the painter's observations from nature are forcibly constrained to assimilate, though the binding principle which in reality is to be discerned in her themes may be of a different and more subtle

nature. It is perhaps in disgust at such blunted perceptions that M. Pissarro, though in the planning of his subject he shows a considerable sense of patterning, not only approaches the question of colour with stern determination to read into his theme no unifying principle which is not of Nature's contriving, but also selects by preference effects of light which almost defy attempts to see in them any principle of harmony at all. He loves a harsh, matter-of-fact illumination where one thing separates from another with pitiless crudity, and the prospect offers nothing but a gaunt statement of certain concrete facts in themselves, often singularly fortuitous and without general significance.

Perhaps no kind of place presents to the imaginative observer a face more baffling than a suburb like Acton, and under certain aspects it has enabled M. Pissarro on several occasions to do something like justice to its desolating vacuity (No. 15 is a typical example of such success). There are moments when Acton transfigured becomes a type of the perennial beauty of the earth. M. Pissarro waves aside such obvious romanticism, and conscientiously and historically gives us Acton in quintessential perfection.

It might seem that in the painting of the unsocial aspect of a London suburb there was a fine suitability in the use of harshly subdivided colours, each insistent, yet degraded; but it is difficult to admire without uneasiness a painter who, whatever be his theme, inclines to the same "flat" note. Modern art rightly tolerates an occasional discord for purposes of expression, but we confess we are unable, after much study of the odd use of colour by M. Pissarro, to decide whether it implies ironic comment on the superficial pettiness of modern life or inability to imagine anything more generous and more ample. Pessimism in art is always apt to drape itself in an appearance of subtlety, and in M. Pissarro's dispirited canvases there is a certain refreshing acidity, preferable perhaps to the sugary and cloying sweetness of colour adopted by Mr. Bevan in conjunction with a feeling for characteristic drawing healthy enough. The essential sugariness of the latter artist's colour is not effectually disguised by the violence of its intervals, and it seems strange when associated with his frank common sense in the handling of form, as if a well-worded, crisp verse were set to a sickly sentimental tune.

If M. Pissarro's use of colour is an apotheosis of the blindly fortuitous, Mr. Ginner (36-39) seems the victim of successive waves of vague and unrelated emotion, and is thus, perhaps, as typically a modern of the moderns as Van Gogh himself in his most flaccid moments. Again, the work seems to be quite sincere, Mr. Ginner apparently having enjoyed in No. 36 the complete relaxation of any effort at order or control, such as was the basis of classic art. If art be the expression of personality, this is art of a sort—in our own view, bad art. No. 39, *The Sunlit Wall*, despite much meaningless violence, shows more ambition to set down an imaginative view of things in coherent fashion, and we would urge Mr. Ginner to present this side of his personality rather than that resulting from the cultivation of miscellaneous emotion.

The other exhibitors (except for one or two included in the show in a spirit of personal camaraderie rather than from community of intention) are artists of the Impressionist School, several of whom have an admirable sense of colour, and one of them, Mr. Spencer Gore (whose work we

have recently discussed), a power of dainty design. Mr. Harold Gilman (52-55) shows as a rule less readiness than Mr. Gore to concede the little inventions of touch which give the pictures of the latter a finish of pattern so decorative in effect. On the other hand, Mr. Gilman's *Head of an Old Woman* (55) is a robust, serious portrait, of greater power than any other figure-painting in the room, excepting perhaps Mr. Sickert's (12) *Camden Town Murder*, No. 2. Even this impresses us more by its fine sense of illumination than by the sheer sincerity of characterization which makes Mr. Gilman's work so promising. Ranking for the present as of the same school as Mr. Gilman, Mr. Gore, and Mr. Drummond (the last a similar painter of rather more obviously vivid colour, 44-47), Mr. Sickert does not succeed in making us forget an earlier manner, an example of which now at the Carfax Gallery (*The Old Oxford Music-Hall*, uncatalogued) confirms us in the impression that that earlier manner, with its broadly planned masses and liquid facture, was intrinsically a superior method of painting for the purposes of Mr. Sickert's talent. A vision which seizes so boldly on an arabesque has need of paint of some complexity of structure to give it mystery; some of the immediateness of the observation, moreover, is lost by sacrificing for a technique of spots the swift continuity of stroke united with the variety of touch got by working in relatively thin paint.

Of the minority who stand definitely apart from this school of Impressionists, Mr. Gilman's and Mr. Gore's by birthright, Mr. Sickert's by—perhaps hasty—adoption, Mr. Lightfoot shows the most important work (17-20), which is all of it full of promise. Mr. Lamb is better represented at the Studio show at Fitzroy Street, which is open till the end of this month. Here he has a replica of the 'Mort d'une Paysanne,' at the Suffolk Street Galleries, in some respects even better than that astonishing work.

ARCHÆOLOGICAL NOTES.

AT the meeting of the Académie des Inscriptions on the 12th of last month a communication was read from the learned Dominican Father Scheil, announcing the discovery of an "archaic" cuneiform text establishing, according to him, the occurrence in early Babylonia of a foreign supremacy hitherto unsuspected. From the summary of the communication which is all that has yet appeared, it seems that before the Dynasty of Ur, whose date Father Scheil puts at about 2500 B.C., a people called the "Guti," coming from the country lying between "the Zab, the Tigris, the mountains of Soleimanieh, and the river Diyala," invaded and subdued Babylonia, setting up a dynasty that lasted at any rate for a considerable time. This is the more curious as Mr. King in his 'Chronicles concerning Early Babylonian Kings' thinks that the Dynasty of Ur itself represents the reaction of the Sumerian element in the population against the Semitic domination founded by Sargon of Akkad and his son Naram-Sin. If the Sargonides were previously overthrown by foreign conquest, the way would have been to a certain extent prepared for this, and it would be interesting to know whether these Guti, who seem to have come from the south of Lake Van, had any affinity with the Sumerians, or were of Kurdish blood. It is to be hoped that the forthcoming *Comptes Rendus* of the Académie des Inscriptions, in which Father Scheil's

communication will no doubt receive more extended notice, will throw further light on this point.

At last week's *Conversazione* of the Royal Society were exhibited for the first time a small collection of antiquities found by the Nubian Archaeological Survey in the "Area to be submerged on the raising of the Assuan Dam," as we were unkindly reminded by the Catalogue. These were most interesting, and included many objects which, if found further north, would certainly have been claimed as belonging to the period of the First and Second or Thinite Dynasties. The decorated pottery shown included black incised ware filled with white, closely resembling that found at Abydos, Mahasna, and other early sites, including some of the thin glazed red-and-black vases incorrectly called "Pan-grave." One of the last was noticeable from the fact that it had a long curved spout, like that of a modern teapot, inserted with a hole a little above the base, of which no other example is known. It is difficult to see with what purpose this alteration was made, except for convenience of pouring; but in that case it must evidently have been an addition after manufacture, as a slight pulling-out of the rim at one point would easily have achieved the same end.

The gem of the collection was the handle or shaft of a mace about two feet in length, covered with thick gold foil, on which appeared in relief figures of animals like those on the votive mace-heads and shields found at Hierakonpolis, and now in the Ashmolean Museum and elsewhere. It is intended to publish the details of these in the forthcoming *Bulletin* of the Survey. They will be looked for with interest, as they would seem to establish beyond doubt the truth of the theory that the predynastic and protodynastic culture of Egypt extended over Nubia also, and was therefore presumably of African origin.

The current number of *The Journal of Hellenic Studies* contains an article by Mr. J. Six reproducing some fragments of a marble head in the Swedish National Museum, and there called 'Deianeira,' which, the author endeavours to show, once formed part of the pediment of the Parthenon at Athens. The fragments are extensive enough to admit of the reconstruction of the whole head; and, by comparing this with the fragments of the same provenance which are, unfortunately, all that remain to us of the masterpieces of Phidian art once adorning the Pediment, Mr. Six manages to make out a sufficient case for the attribution suggested. It is therefore the most complete example of the sculpture of the face and head known for its period, and deserves to be studied as such together with the so-called "Elgin Marbles." It seems to have come into Sweden as the property of Queen Luise Ulrike, sister of Frederick the Great of Prussia, and to have formed part of the collection made by her at Drothningholm in 1749. Mr. Six suggests that, like some other fragments of the Parthenon which found their way to Copenhagen in 1688, it may have once formed part of the loot brought home by Count Königsmark's countrymen.

In an article in the same *Journal* by Mr. H. B. Walters, on 'Vases recently acquired by the British Museum,' there is noticed a vase-painting (which the author of the article claims as unique) representing the capture of Silenus by the guards of Midas. The painting shows Silenus lying on his back, and drinking from what is said to be a conventional representation of the fountain of Inna, while a guard lurks near with a thong in his hand, with which to bind the

god when caught. Midas is seated on a chair, watching the scene, with a spear in his right hand, and is identified by the name written in front of him; but the names in front of the two other personages cannot now be read.

Mr. Walters refers the picture to the legend preserved by Xenophon, Athenæus, and Ovid that Midas took Silenus captive by mixing wine with the water, and quotes from Ælian and Plutarch the explanation that the king endeavoured thus to extract from the god the secret of life, with, apparently, indifferent success. He also quotes from the Jewish Haggadah the story of Solomon using the same artifice to ensnare the demon Asmodeus when building the Temple, and thus learning the true method of using the worm Schamir, who played so large a part in its construction. This later adaptation of the legend is an excellent example of the acquisitive habits of the Jews, for the worm Schamir is probably nothing but a corruption of the Greek *σχῆμα* or plan.

In the current number of the *Revue de l'Histoire des Religions* M. Isidore Lévy continues his study of the Greco-Egyptian god Serapis with a chapter on the colossal statue in the Alexandrian Serapeum, attributed by Athenodorus and others to Bryaxis. There seems little point in M. Lévy's contention that Ptolemy Soter must have been prevented by the difficulty he found in retaining his new kingdom from giving a commission to Bryaxis, because, while the Lagid seems from the first to have found himself pretty firmly seated on the throne, the ordinary tradition makes it clear that the statue was executed some time beforehand. M. Lévy may be better grounded when he deals with the mystic beast with the heads of a dog, a wolf, and a lion respectively, which ancient authors describe as seated by the statue of the god, and avers that the dog and the wolf typify Anubis and Upuat, the "guards" of Osiris, while the lion was the emblem of Horus. All this can be justified from Egyptian sources, and corresponds with a good deal that we know of the later stages of the cult, although M. Lévy can only show that the Cerberus-like figure "marks the complete Hellenization" of the Egyptian god by assuming it to be a later addition. What we really want to clear up this and more important points in the history of the Alexandrian cult is some earlier evidence than that of Apuleius for its doctrine and ritual.

In connexion with this may be read a note in the same *Revue* by M. Franz Cumont on a study which he has lately made of the custom of releasing a captive eagle at the funeral of a Roman emperor. He gives a letter from Mr. Alan Gardiner, in which the latter quotes several Egyptian texts to show that the Pharaoh was looked upon as "the divine falcon," who at his death flew up to heaven and became united with the Sun. His reading of the royal cognizance or *srekh* as "the falcon on his nest" is new, and derives some support—although he does not say so—from the fact that the top of the rectangle on which the royal hawk sits is in early times often curved in a concave form so as to resemble a nest. The identification of the Egyptian hawk, which was, as M. Victor Loret has shown, the peregrine falcon, with the Roman eagle presents no real difficulty; and every Egyptologist will agree with M. Cumont's theory that, long before the Alexandrian era, Egyptian beliefs had great influence in Syria, whence he would derive the Roman practice referred to. Too much stress may, however, easily be laid on the interpretation of symbols which were not

in themselves very precise, and might easily pass from one nation to another. The notion of the soul of the dead mounting to heaven from the funeral pyre is found among many peoples, and may have arisen in the first instance from the upward direction of the column of smoke.

In the same number is an important article by M. Louis Massignon upon Al Hallāj, the founder of modern Sufism, who was mutilated, crucified, and burnt in the year 922 A.D. for heresy by the Caliph of Bagdad. According to the texts which M. Massignon here translates, it was not the saint himself who thus suffered, but another person who was miraculously substituted for him at the last moment. As M. Massignon points out, this was a sort of revival of the theory held by the Docetics and other Gnostic sects from the second century onwards with regard to the Passion of the Founder of Christianity; but the attempt he makes to draw a parallel between a variant of the legend, which gives the substitute an animal form, and the ass-headed crucifix of the Palatine is hardly successful.

Still more curious is his hypothesis that the Yezidis or devil-worshippers of Bagdad have drawn their peculiar ideas upon the Evil Spirit from the remains of Al Hallāj's teaching. A MS. quoted by him as formerly belonging to a Jacobite living at Mosul during Omar Pasha's campaign against the Yezidis in 1883 narrates that when Al Hallāj's soul left his body it wandered over the face of the waters until the dead saint's sister came down to the river to fill her jar. Into this it entered, and when the maiden afterwards drank of the water, she gave birth to a son, who was Al Hallāj himself reborn. This story seems to be a complex of legends belonging to many different faiths. It is worth noticing, however, that "zindīq," which was the term bestowed upon Al Hallāj in his sentence, is shown by Darmesteter to mean "a heretic who prays to Ahriman," and was judicially used in Abbasid times to describe a Mussulman who secretly turned to Manichæism. That a dualistic faith should have lingered near the original seat of dualism so long as to have endured to our own days is not surprising.

M. A. Loisy, of "Modernist" fame, gives in the *Revue Critique* of last month an instance of religious survival which is much more astonishing. He quotes from a tractate by Herr H. Benser, recently published at Tübingen, on 'Das moderne Gemeinschaftschristentum,' in which he describes certain Revival meetings lately held in Germany on the model with which we are familiar in England, Wales, and America. He declares that those attending these meetings have developed a dialect of their own, and he gives a hymn there sung in which the word "Ea" is unconsciously substituted for Jesus, and "Tu" for God. Evidently, he says, this is a survival of the *glossolalia*, or speaking with tongues, which was one of the special graces of the Primitive Church.

EXCAVATIONS AT MEROË.

An exhibition of the antiquities discovered by Prof. Garstang during his last winter's work at Meroë is now being held in the rooms of the Society of Antiquaries at Burlington House, and will continue open till the 27th inst. The different objects there shown are all excellently arranged and displayed, and labels are appended to most of them which sufficiently describe

them. Yet this hardly makes up for the absence of the detailed catalogue generally supplied in exhibitions of a like nature, in which the exhibits are set forth *seriatim*, and identified by numbers or otherwise. That given to the visitor to the present exhibition is in substance a very brief report on the excavations generally, the part dealing with this season's work not occupying more than two pages.

The gem of the exhibition, according to the excavator, is a bronze head which he regards as representing Germanicus. As has been said in the daily press, it is twice the size of life, and furnished with eyes of alabaster with inlaid pupil and iris of coloured glass, and eyelashes of bronze. The strong lines of the face and the small but projecting ears show much character; but there seems little reason for its attribution to Germanicus, the passage in Tacitus on which Prof. Garstang relies merely stating that Germanicus went on a tour in Egypt to see the antiquities, and sailed up the Nile as far as Assuan. That he ever made his way above the Cataracts there is no evidence; and Strabo, who probably wrote in the lifetime of Germanicus, speaks of the Roman garrison of three cohorts, "and those not complete," being stationed only at Assuan or Syene, where they formed a sufficient guard to the upper country. It is therefore unlikely that Germanicus, as a mere tourist travelling, Tacitus tells us, without the permission of Tiberius, should have penetrated to the city of the Ethiopians at all, still more so that he should have appeared to them so important a personage as to deserve a statue. It is more likely that the head formed part of the plunder obtained by the Ethiopians when they raided Syene in the time of Augustus, "and threw down the statues of Cæsar." Most of the iconic statues of that time had detachable heads, and this one might easily have been taken away by them as a fetish, and as such hidden from the punitive expedition of Petronius.

The other exhibits, when taken with those of last year, afford a clear idea of the scope and nature of Ethiopian art, which, it is now plain, must have been largely indigenous, and owed less than was supposed to Egyptian influence. The pottery here shown is of a ware perfectly different from anything in Egypt, and it is notable that all the larger vessels are evidently modelled from gourds and other vegetable forms, instead of, as in the earlier Egyptian types, from baskets and ivories. Their construction displays high technical skill, and a young negro's head in sandstone, if it is indeed of native work, shows that the Ethiopians were in sculpture far superior to the Egyptians of any but the earliest dynasties. Some neolithic implements—axes and the like—of polished stone show, too, that their civilization was of considerable antiquity; and some beautifully shaped arrow-heads, either of glass or a translucent stone, are longer, narrower, and more delicate than any yet found in Egypt.

Nevertheless the Ethiopians must have looked towards Egypt from a very early date, and there are in the present exhibition a cylinder-seal of protodynastic pattern, scarabs and jewels of Amenhotep III. and Queen Thyi, and a large figure of the god Bes, of typically Egyptian execution. One wonders whether these, too, are not loot from one of the raids which the Ethiopians made from time to time into the Nile Valley during the periods of weakness of the central power; but there is also plenty of proof that at a later date—or, particularly,

within the last millennium B.C.—the worship of the Egyptian gods, especially Amen and the deities of the Osiris cycle, was taken into Meroë, and probably grafted on to some existing native cult. The new faith seems to have been associated here with many cruel and savage practices unknown further North, including, according to Prof. Garstang, human sacrifices. The scenes here shown from the walls of the Meroitic temples which depict prisoners being goaded and dragged to execution, and a small clay figure of one having his feet tied to the back of his neck in a position to which the "frog's march" must be a relief, reveal a thoroughly African delight in cruelty for its own sake. Equally African is a large piece of pottery with a slightly concave top and a central opening, which is described on the label attached as a bottle, but is evidently a low stool like those used by the Ashanti chiefs or caboceers at Coomassie and elsewhere.

Among the smaller objects shown we note a beautiful cameo with a pair of galloping horses (black and white respectively), some good and unusual beads, and some curious moulds of pottery. One of the last is for making the sacred *ankh*, and another for an emblem which is suspiciously like a true lover's knot. What the substance was that was poured into these vessels remains a puzzle, as the pottery, which is not particularly well-baked, would probably not have stood the heat of molten metal. A stela discovered on a former occasion by Prof. Garstang, in which the *ankh* was represented by a hole, may possibly have been connected with these, and makes one wonder whether the castings were not made in some perishable substance, such as wax. But in this case what was the symbolism involved? There is, of course, the possibility that the moulds were used for the baking of cakes or loaves, but their relatively large size militates somewhat against this view.

The strictly historical inscriptions here shown include several cartouches of King Mer-ka-Ra, whose other name seems to have been Aspalut, and King Uatch-ka-Ra, also named Hor-ma-ti-leq. No Horus or hawk-names appear to have been discovered, and it is evident therefore that the Ethiopian kings only imitated the royal protocol of intitulation of Egypt in part.

Lastly, there were discovered within the ruins of one of the royal palaces some pottery jars containing gold dust and nuggets to the value of about 1,700*l.* It is suggested that this formed part of the royal hoards stolen from the treasury and hidden by the thieves. Another explanation would be that it was concealed by its lawful owners when Meroë was taken and sacked, as Prof. Sayce has shown, by Ta-zêna, King of Axum, in the fifth century of our era. The gold has apparently been divided between the Sudan Government and the excavator, or rather the syndicate which has borne the cost of the excavations. This hardly seems a good precedent, for, while there is much to be said for the handing-over of antiquities of historical interest to public or private museums in Europe and America where they can be consulted by scholars, everything which might make archaeological research a commercially profitable speculation ought to be rigidly avoided.

No visitor to the exhibition should fail to see the album of photographs and sketches taken by Herr Schliephack, the photographer to the expedition, many of which are of high artistic value.

SALE.

MESSRS. CHRISTIE'S sale on Friday, the 16th inst., was notable for the high prices realized for portraits by masters of the English School, works by Reynolds, Hoppner, and L. F. Abbott exceeding 2,000*l.* each; by Raeburn, 2,000*l.*, 3,000*l.*, and 5,000*l.*; and by Gainsborough, 3,000*l.* and 4,000*l.*

The following were from the collection of the late Sir Thomas Andros de la Rue:—Clouet, Portrait of a Lady, in black dress with white collar and cuffs, wearing jewel ornaments, 472*l.* Palma Vecchio, Portrait of a Lady as the Magdalen, in red dress, with long fair hair, holding a pot of ointment, 315*l.* Allori, A Lady, in blue dress, as Judith, an attendant behind her holding the head of Holofernes, 220*l.* Bellini, The Presentation in the Temple, 420*l.* Francia, The Madonna and Child, the Madonna, in red dress and green robe, supporting the Infant Saviour on a ledge before her, 325*l.* Matteo di Giovanni, The Virgin and Child, with saints and angels' heads, 304*l.* H. van der Goes, The Virgin and Child, the Virgin in dark green dress and red cloak, offering an apple to the Infant Saviour, whom she supports on a ledge before her, 924*l.* Murillo, The Madonna, in red dress with blue robe, holding the Infant Saviour, 430*l.* Opie, Youth and Age, 315*l.* B. van Orley, A Lady, in black dress with fur sleeves, holding a book, 210*l.* Bonifacio Veneziano, The Repose in Egypt, the Madonna, in red dress, blue cloak, and white head-dress, seated upon the ground with the Infant Saviour on her lap; beside her the infant St. John and St. Joseph, 346*l.*

The following were from different properties. Drawings: Watteau, Studies of Heads of Two Young Ladies, black, white, and red chalk, 1,648*l.*; Studies of Heads of Three Negroes, black and red chalk, 1,239*l.*

Pictures: Gainsborough, Lady Innes, wife of Sir William Innes of Ipswich, in blue dress with white lace frills, holding a rosebud in her left hand, 3,780*l.*; Thomas Medlicott, in buff coat with blue facings, blue vest, yellow breeches, white stockings, and black cocked hat; seated on a stile, holding a cane in his right hand, 4,410*l.* Raeburn, James Wardrop of Torbanehill, Linlithgowshire, in dark dress with white stock, 651*l.*; Col. Orde, in dark coat with white stock 567*l.*; Rev. David Johnstone, D.D., in black gown with white bands, 840*l.*; Mrs. Newbigging, née Myrtle, wife of James Newbigging of Whitehouse, in white dress, with black shawl over her arms; powdered hair, 3,045*l.*; James Newbigging of Whitehouse, in green coat and white stock; powdered hair, 220*l.* German School, The Day of the Crucifixion, and an engraving, by Jacob Matham of a similar composition, bearing the signature of Albert Dürer and the date 1505, 714*l.* Lucas Cranach, Hercules and Omphale, a gentleman, in black slashed costume with white vest and head-dress, seated, spinning a thread from a distaff, which is held by a female attendant; a lady, in red dress, leans over his shoulder, and another, in green dress, is conversing with him, 577*l.* N. Maes, Portrait of a Burgomaster's Wife, in black dress with white lawn collar and white sleeves, and close fitting black cap; holding a fan in her left hand, 504*l.* Reynolds, Lady Willoughby de Broke, in the robes of crimson velvet and ermine which she wore at the Coronation of George III., 1,417*l.*; Lady Hamilton as a Bacchante, 1,575*l.* Lawrence, Mrs. Kynnersley, in white dress, with black sash and muslin scarf, her hair bound with white ribbons, 1,785*l.*

The following pictures formed part of the Lyne Stephens collection: L. Boilly, A Girl, in white dress, standing in a garden, taking some young birds from a nest, 714*l.* A. Canaletto, The Entrance to the Grand Canal, Venice, with the church of Santa Maria della Salute on the left, 472*l.* J. B. Greuze, A Young Girl Praying, in white night robe and black shawl, kneeling by her bedside, 1,207*l.*; The Unhappy Family, 294*l.* J. van der Heyden, The Dam at Amsterdam, 1,365*l.* N. Largillière, Portrait of a Lady, of the Court of Louis XIV., in white dress with gold trimmings, blue scarf; before her toilet-table, binding her hair with a mauve ribbon, 1,627*l.* J. B. Pater, A Fête Champêtre, five figures and two children round a table; a man rocking a girl in a swing on the left, 1,155*l.* H. Rigaud, Louis XIV., in armour, with white scarf, wearing the Grand Cordon du Saint Esprit, 420*l.* P. Wouverman, Travellers, a river scene, with trees on a bank on the right, under which are two peasants and a dog; in the centre a woman and a boy wading across the stream; on the right a horseman, and a man leading another

horse, emerging from the river, followed by two dogs, 420l.

The following pictures were from the collection of the late Lady Baillie of Polkemmet: Early English School, Portrait of a Lady, in yellow dress and red cloak lined with fur, resting her right hand upon the shoulder of her daughter, 315l. N. Maes, Portrait of a General, in Roman costume, with a breast plate and crimson toga, holding his helmet with his left hand, 420l. Raeburn, Mrs. Johnston of Straiton, second daughter of William Baillie, Lord Polkemmet, and wife of James Johnston of Straiton, in white high-waisted dress with short sleeves, maroon cloak thrown over her shoulders; seated on a stone seat, 5,775l.; James Johnston of Straiton, in blue coat, white vest, and white stock; seated turning over the leaves of a book, 1,312l. G. Watson, Miss Isabella Baillie, in white muslin high-waisted dress, cut low at the neck, and with short sleeves, 294l.

The following pictures were from the collection of the late Sir Rodney Stuart Riddell: Raeburn, Thomas Milles Riddell, in scarlet coat, with buff breeches and top boots, holding his hat and rifle in his right hand, 2,205l.; General Duncan Campbell of Lochnell, in scarlet coat and buff breeches, his arms crossed, holding his bearskin hat in his right hand, 1,008l.

The following family portraits and pictures were the property of Viscount Hood: L. F. Abbott, Samuel Hood, first Viscount Hood, in naval uniform trimmed with gold braid, white vest, breeches, and stockings; standing, leaning his left elbow on a rock; holding his sword in his right hand, and his hat in his left, 2,310l.; Alexander Hood, first Viscount Bridport, in naval uniform with gold braid, white vest, and breeches, wearing the Order of the Bath, 1,417l. Sir W. Beechey, Henry, second Viscount Hood, in blue coat with brass buttons, white stock, and powdered hair, 546l. Hoppner, Vice-Admiral Sir Samuel Hood, in blue naval coat, white breeches, and white hose, wearing the ribbon and Order of the Bath, 2,310l. N. Pocock, Naval Engagements (a pair), the English fleet on April 29, 1781, offering to renew the fight, and the French, keeping close upon a wind, standing to the southward under a press of sail, 441l.; Naval Engagements (a pair), the van of the British fleet, under the command of Sir Samuel Hood, attacked on January 26, 1782, by van and centre of the French fleet, 441l. Reynolds, Alexander Hood, first Viscount Bridport, K.B., in blue naval coat and white vest, trimmed with gold braid; leaning his right arm upon an anchor; his left hand holds the hilt of his sword, and his right, his cocked hat, 2,730l. School of Reynolds, Lord Robert Manners, in brown coat edged with gold braid, white stock, powdered hair, 262l.

Fine Art Gossip.

THE Coronation honours include Knight-hoods for Mr. Frederick Eaton, Secretary to the Royal Academy; Dr. Arthur Evans; Mr. Ernest George, A.R.A.; Mr. Claude Phillips; and Mr. Frank Short, President of the Painter-Etchers.

SIR CHARLES HOLROYD's term of office as Director of the National Gallery expired a few days ago. On June 11th, 1906, when there had been no Director of the Gallery for eighteen months, he was appointed for a period of five years. It is to be hoped that he will enter upon another term of office, so as to carry to completion the arduous work that he has undertaken.

THIS week's obituary includes the names of three French artists: Gustave Delhumeau, a portrait painter who exhibits at this year's Salon, and lost his life in a motor accident; Madame MacNab, widow of M. Alexandre MacNab, and at one time a successful exhibitor at the Salons; and M. Maurice Lefebvre, the sculptor, son of M. Jules Lefebvre, the well-known painter and member of the Institute. The last-named, who was only 25 years of age, obtained a "mention" for his plaster statue 'Volupté' in this year's Salon.

THE Académie des Beaux-Arts issued on Saturday last its first list of awards. The Prix Meurand (1,000fr.), confined to a young landscape painter, is awarded to M. Jules Zingg for 'La Nuit.' The Prix Maria Bouland (3,000fr.) goes to M. E. Lesellier for his 'Saint-Hervé et les Pâtres Bretons.' The Prix Eugène Piot (2,000fr.), confined to painters or sculptors of child life, is taken by M. H. D. Etcheverry for his picture 'Jeunes Italiens à la Fontaine.' The Prix Desprez (1,000fr.) is taken by M. P. Silvestre for his plaster statue 'Ébats'; and the Prix Sandfort Salters, awarded this year for the first time, and confined to battle scenes, goes to M. L. F. Malespina for his picture 'Le Général Hoche à Froeschwiller, 1793.' All the foregoing works are exhibited at this year's Salon des Artistes Français.

THE well-known Danish Court painter, Prof. L. Tuxen, has been commissioned by King George to paint a picture of the Coronation ceremony, similar to his works executed for the Diamond Jubilee and the Coronation of 1902.

No. 5 of the *Journal of the Imperial Arts League, Incorporated*, is dated June 15th. Matters of business detail now having been settled, room has been found for several papers of general interest. Mr. Walter Crane writes 'On the Relation of the Artist to Municipal Life.' H. A. O. gives the numbers of exhibits shown by various bodies at the Shepherd's Bush Exhibition, the Royal Societies of Painters in Water Colours and of Painter-Etchers and Engravers leading, with 203 and 200 works respectively. 'The Lethargy amongst Artists regarding Artistic Copyrights' is discussed by Mr. W. Reynolds-Stephens, an active member of the League, whose allegorical group 'A Royal Game' has been purchased by the Chantrey Trustees.

THE preparations for the fifth volume of the 'Allgemeines Lexikon der Bildenden Künstler' are now well advanced. It will extend from 'Brewer' to 'Carlingen.' Dr. Thieme hopes to publish also the sixth volume of his excellent Dictionary of Artists before the end of the year.

THE death in his 58th year is reported from Hanover of the historical painter Prof. Hermann Schaper. His best work is to be found in the town halls of Hanover and Göttingen, in the Marienburg, and in various churches. Of late years he had devoted himself to the decoration of the Cathedral of Aix-la-Chapelle, and the glass mosaics there are his work.

THE extensive collection of Egyptian antiquities formed by the late F. G. Hilton Price, which Messrs. Sotheby will sell on July 12th and seven following days, will offer exceptional opportunities to collectors.

EQUALLY remarkable, but in another direction, is the Huth collection of early engravings and woodcuts, which the same firm will sell on July 4th and two following days. They are for the most part by masters of the fifteenth and two succeeding centuries, and, so far as the German and other woodcuts of the fifteenth century are concerned, the impressions in the Huth collection are the only ones known. It is to be hoped that some of the rarer pieces may be secured for the British Museum.

EXHIBITIONS.

SAT. (June 24).—Calderon Art Society, Third Exhibition, Private View, Alpine Club Gallery.

MUSIC

THE WEEK.

COVENT GARDEN.—*Louise.* *Madama Butterfly.* *La Sonnambula.*

THE performances of 'Louise' on the 12th inst. and of 'Madama Butterfly' on the 14th, though very good, call for only brief notice, as in each case there was but one change in the cast.

In the former opera Julien was impersonated by M. Franz, who, as we mentioned last week, was exceptionally fine as Samson, but in the very different part in Charpentier's opera was not so impressive.

In 'Butterfly' Mr. R. Martin took the part of Pinkerton for the first time, and with good results, his singing being effective and his acting natural. Both works were given under the capable direction of Signor Campanini.

Bellini's 'La Sonnambula' was performed on the 16th. When the part of Amina is entrusted to an accomplished singer—on this occasion it was Madame Tétrazzini—the florid soprano music is attractive to some; for good singing always affords pleasure. From a musical, as from a dramatic point of view, the opera possesses scarcely any interest, except to those who are curious to hear a work which in the palmy days of Italian opera enjoyed a certain popularity.

QUEEN'S HALL.—*Mr. Beecham's Delius Concert.*

MR. THOMAS BEECHAM has already produced many of the works of Mr. Frederick Delius; except for him, indeed, we should know very little of a composer who shows earnest thought and strong feeling. On the 16th inst. Mr. Beecham devoted the whole of the programme of his orchestral concert to Delius. It included 'Appalachia,' based on a genuine slave-song from the Mississippi, and the Symphonic Poem 'Paris,' in which there is a fine blend of objective and subjective music, reminding one of Charpentier's 'Louise'; dates, however, show that 'Paris' was written before the opera. There was also the 'Dance Rhapsody,' first performed at Hereford in 1909.

In addition there was a novelty, 'Songs of Sunset,' a song-cycle (words by Ernest Dowson) for mezzo-soprano and baritone soli, chorus, and orchestra, with Madame Julia Culp and Mr. Thorpe Bates as excellent soloists. It is a highly interesting work, but, though some pages show strong inspiration, in others the composer seems to have sought without finding; the means are clever, but the result is not convincing, at any rate at first hearing.

ÆOLIAN HALL.—Susanne von Morvay's Début.

SUSANNE VON MORVAY, who gave a piano-forte recital last Saturday afternoon, is not yet sixteen years old. The programme described the wonderful things she had done when quite a child. Statements of this kind have usually to be taken *cum grano salis*, but, after hearing her, we do not think they were exaggerated. She played the Bach-Liszt Organ Phantasy and Fugue in G minor with marked intelligence and splendid tone, and interpreted Beethoven's Sonata in F sharp, Op. 78, with skill and feeling. But her performance of Liszt's Sonata in B minor was simply wonderful. Her technique is quite abnormal, and her rendering of the music, for boldness, bigness, and emotional power, was astonishing. There was one thing which showed that she is young. She has very strong fingers, and seemed to rejoice at times in displaying to the full that strength. That is, however, natural, and she will soon understand the value of restraint. Liszt was named the king of pianists, and, health permitting, Susanne von Morvay will certainly become the queen.

Musical Gossip.

WE congratulate Sir Edward Elgar on receiving the Order of Merit, and Dr. F. H. Cowen on his Knighthood.

WE also congratulate Mr. H. C. Colles on his appointment as musical critic to *The Times*, in succession to Mr. J. A. Fuller Maitland.

ON Monday there were two interesting piano-forte recitals at Bechstein Hall. The first was given by M. Robert Lortat, who proved himself a master of the keyboard. There was a strong display of individuality in his renderings of Beethoven's 'Appassionata' Sonata, Op. 53, and Schumann's 'Études Symphoniques': the pianist knew what he wanted, and how to express it. In the first movement of the Sonata the tone was at times unduly loud, while in the 'Études' there was a tendency to hurry some of the numbers. The last variation and the Finale were played, the one with rare delicacy, the other with great spirit. M. Lortat's Chopin playing was delightful.

IN the evening there was the recital of Herr Max Pauer, son of the well-known pianist and teacher the late Ernst Pauer, with whom he studied. After a fine performance of Bach's Chromatic Fantasia and Fugue, he played Beethoven's Sonata in A flat, Op. 110. His reading was admirably clear, though, perhaps, occasionally too restrained. The second group in the programme included five of Mendelssohn's 'Songs without Words' and the 'Rondo Capriccioso.' At the end came Max Reger's 'Variations and Fugue on a Theme by Bach,' Op. 81. There is much very clever writing in this work, but it is too long. The earlier variations seem to us more interesting than the later ones; in the former the influence of Bach predominates, in the latter, that of Brahms. The writing for the instrument is at times

very difficult, but Herr Pauer played everything with astonishing ease, clearness, and brilliancy.

PERFORMANCES NEXT WEEK.

MON.-SAT. Royal Opera, Covent Garden.
 MON. Madame Yvette Guilbert's Recital, 8.15, Bechstein Hall.
 — Max Pauer's Piano-forte Recital, 8.15, Bechstein Hall.
 TUES. Mr. Daniel Beddoe's Vocal Recital, 8.15, Bechstein Hall.
 — Misses I. Ainsley and Constance Lyall and Dr. Szanto's Concert, 8.30, Bechstein Hall.
 WED. Miss Janet Spenser's Vocal Recital, 8.15, Bechstein Hall.
 — London Trio Chamber Concert, 8.15, Æolian Hall.
 — Madame Adelaide Mullen's Vocal Recital, 8.15, Steinway Hall.
 — Henry Hadley's Orchestral Concert of his own Compositions, 8.15, Queen's Hall.
 — Mr. Vernon Warner's Piano-forte Recital, 8.15, Æolian Hall.
 THURS. Speranza Calo's Vocal Recital, 8.15, Bechstein Hall.
 — Hon. Mrs. Julian Clifford's Vocal and Piano-forte Recital, 8.15, Æolian Hall.
 — Dr. Ethel Smyth's Concert, 8, Queen's Hall.
 FRI. Solomon's Orchestral Concert, 8, Queen's Hall.
 — Mr. Bertram Binyon's Vocal Recital, 8.15, Æolian Hall.

DRAMA**IRISH PLAYS AT THE COURT.**

IT is difficult for an English critic to restrain some feeling of jealousy as he contemplates the series of new plays which the Irish Players have been presenting during their season at the Court. Here we find no pandering to conventional sentiment, no repetition of stock types and hackneyed situations, no monotonous insistence on one aspect of sex or one section of society. The authors of these works have no class preferences; they do not confine themselves to the theme of love; they contrive somehow to suggest "atmosphere," whether their scenes are laid in mean streets or country villages; they secure idiosyncrasy for their characters, whatever their rank in life, so that to hear them talk is to know them as individuals; they get hold of live subjects, and work out their ideas on dramatic lines that are logical and sincere. Moreover, in each case the playwright's name is new to London, just as the topic he handles is fresh and of immediate significance.

Now we make the acquaintance of Mr. R. J. Ray, who in 'The Casting-Out of Martin Whelan' makes grim comedy out of the prejudice of his countrymen against the so-called informer. Grasp of theatrical technique seems to belong to him as naturally as to his colleagues, and in his play, no less than in theirs, we appear to be moving amongst rather odd, but obviously real people.

Yet Mr. Ray's plot is simplicity itself. Martin Whelan, a young man of Irish stock, though he hails from Australia, comes home to the old country to find it curiously apathetic. His notion is, so far as he may, to make a change. With personal charm, eloquence, and enthusiasm, he soon wins himself a reputation in local politics, though some of his unconventional speeches are not approved by his Catholic friends. It is at a farmhouse tea-party, given mainly in his honour, that we hear all about him. His hosts and their friends canvass his ambitions and indiscretions before he arrives, and when he puts in an appearance, it is patent that the only person present who is in sympathy with his aims is Ellen Barton, a girl whose father, after giving her a good education, is always quoting instances of her independence of spirit and her baffling vocabulary, in part astonishment, part jest, and part pride. In a little while the party begins to break up, but Martin retraces his steps to retrieve something he has left behind. At this point the playwright pro-

duces by familiar means a situation that is highly effective. Between Martin's departure and return a revelation has been made about him, and when he reappears he is astonished to note the embarrassment and silence with which he is received.

But this experience is only typical of what awaits him later. He who has been hitherto so popular is now boycotted on the country-side. He beards a local League meeting to discover the reason why, but has to adopt bullying tactics even to reach a half-explanation, and then is urged for his own sake not to push his inquiries further. At last he repairs to Ellen, who has already shown herself his champion, and from her learns his offence. He is the grandson of a man who gave evidence which brought about the execution of the murderer of an unpopular land-agent. That fact, and that alone, accounts for his being shunned as though he had the plague. No wonder he exclaims, "What a nation, what a people!" No wonder he complains bitterly of the unreason which cultivates resentment beyond the grave, and transfers hatred from the first to the third generation. But his protests are useless before the invincible barrier of sentiment. Ellen's father orders him out of his house, though not before the girl has declared voluntarily that she will marry Martin when and where and how he will. On the tableau of her facing her angry father the curtain falls.

Mr. Ray's petty farmers and their wives and sons and dependents are admirably realized by Mr. Sinclair, Mr. Kerrigan, Mr. Sydney Morgan, Mr. Brinsley Macnamara, Miss Sara Allgood, and Miss Eileen O'Doherty; and very happily do Miss Maire O'Neill as Ellen, and Mr. O'Donovan as the hero, contrive to make the two educated characters stand out against the background of half-ignorance and prejudice. But the most striking performance in the piece is furnished by Mr. O'Rourke, who as the village zany strikes a note of pathos and poetry.

Two other new plays were staged at the Court on Monday last. One is a full-sized drama by Mr. William Boyle. The other, 'The Clancy Name,' is a single-act tragedy written by Mr. Lennox Robinson, author of 'The Cross-Roads.' The smaller work is characteristic of the young Irish school at its best. Mrs. Clancy, a widow of strong character, has struggled hard to free her home from debt. She has just paid off her creditors when she learns that her son has been guilty of unpremeditated murder and has a longing to give himself up to justice. So soon as she has got over the shock of his confession her main feeling is that of anger at the disgrace he has brought on the family name. She is insistent that he shall not bring the police into the house and kill her with shame. She cannot furnish him with money to go abroad. In the end he virtually commits suicide by rushing in front of a motor-car to save a child's life. While he lies dying she is in an agony lest he should betray himself to the neighbours, but his last attempts at speech cannot be understood, and the priest seeks to comfort the grim woman by dwelling on the gallantry of the lad and the credit he has done in his death to her name. The acting of Miss Sara Allgood as the mother, curiously restrained, yet tense with emotion, emphasizes poignantly the irony of the climax.

'The Mineral Workers,' as Mr. Boyle styles his three-act piece, would carry better on the stage were it not hampered by technical details which the audience cannot well visualize. Here is a contrast between

Young Ireland and the Old. To an elderly farmer and his wife, who are content if they can just pay their way, comes an enterprising cousin from America who wishes to exploit their home for its mineral wealth, and holds out to them prospects of a fortune. The ardour of the younger generation—the farmer's son and daughter—and the advice of a genial Nestor, Uncle Bartle, who respects at once the conservatism of age and the ambition and energy of youth, enable Stephen O'Reilly to have his way. The metal is there, and a company is floated, in which a baronet and an enthusiastic young widow take shares; but Stephen is hindered by the antagonism of two obstinate farmers who hold water-rights, and refuse to make concessions. How Stephen outwits the wilier of the pair, and how Daniel Fogarty, finding himself beaten, quits his ally, joins the syndicate, and at once assumes proprietorial airs, is amusingly told, and would be exciting could all the ups and downs of the contest have been stated in less technical terms. The blustering Fogarty, who has such a good conceit of himself, is a joy at every appearance, thanks to the vivacity of his interpreter, Mr. Sinclair; and all the characters of his class are admirably sketched, particularly Uncle Bartle, in portraying whom Mr. O'Rourke adds one more to his successes. But Sir Thomas Musgrove and the coquettish widow Mrs. Walton, and even the American-twanged hero, have a less convincing air.

Dramatic Gossip.

MANY friends will be glad to see Mr. George Alexander's long services to the stage recognized by a Knighthood in the Coronation list of honours.

THE DICKENS CENTENARY FESTIVAL which Mr. Robert Arthur has arranged—rather prematurely—at the Savoy started auspiciously enough last week with the production of a play prepared by Mr. Metcalfe Wood from the text of 'Dombey and Son.' Like so many other Dickens adaptations, the piece gives but the bare bones of the novel, and would supply to those unacquainted with the master's art no idea of the richness of his vein of fantastic characterization, or the vivacity of his humour. Compelled to concentrate on some plot-scheme, the author has deemed it best to confine his attention to the quarrel of the domineering Mr. Dombey and his young wife Edith, and the revenge she takes by eloping with Carker. The result is a decidedly crude, though telling melodrama, in which the scene where Mrs. Dombey flings her jewels at her husband's feet is the most effective.

If this were the only disadvantage of Mr. Wood's plan of selection, we could hardly make serious complaint. But there are others. He has reduced all sorts of famous characters to the level of "comic relief," and has also had to make sacrifices which Dickens enthusiasts will find it difficult to forgive. A dramatization of 'Dombey and Son' which omits little Paul altogether is odd enough, in view of the title; but Cap'n Cuttle also is swept clean out of the cast. Now the story of the Dombeyes, robbed of the drolleries of Cuttle, is like roast beef without salt and mustard.

On the other hand, the play, notably in the reception in the second act, affords the opportunity for a procession of old friends which goes far to make amends. The

lachrymose Mrs. Chick; Joey Bagstock; the simpering Lucretia Tox; Mrs. Skewton, with her designing temper; Cousin Feenix, now elevated to the peerage; the Parker Peps family; "Waller, my boy," and his sweetheart Florence Dombey, reduced to an *ingénue* part; Mr. Toots and the Blimbers; Susan Nipper and Sir Barnet Skettles—all put in an appearance, and go through their tricks.

To do justice to individual performances would involve mentioning most of the names in an inordinately long programme. Mr. Clifton Alderson brings out the pomposity and pride of Mr. Dombey; Miss Evelyn Millard gets some strong declamatory effects out of Edith Dombey's scenes; there is body in Mr. Louis Calvert's Bagstock; and Mr. Evelyn Beerbohm's Toots is so piquant that we should be glad to see more of him. Good character-acting is provided by Mr. O. B. Clarence as Feenix, Miss Sydney Fairbrother as Mrs. Skewton, and Miss Nellie Bouverie as Lucretia Tox. Pleasing are the Walter Gay of Mr. Worlock, the Florence of Miss Marjory Chard, and the Susan Nipper of Miss Dulcie Greatwich; while unextravagant, straightforward work comes from Mr. Frank Randell as Carker. It is, in fact, the series of Dickens vignettes provided on traditional lines which will obtain popularity for the opening venture of Mr. Arthur's Festival.

We have to announce the death of the most eminent Danish actor of the day, Prof. Emil Poulsen, aged 70, who retired from the Theatre Royal about ten years ago. He was the original exponent of several of Ibsen's leading characters in the later plays when they were staged first of all in Copenhagen, besides excelling as Hamlet and Shylock, and in Danish romantic drama.

TO CORRESPONDENTS.—H. S.—W. M.—W. H.—G. B. G.—T. B.—C. J. F.—Received.

M. J. R.—Many thanks.

MESSRS. BELL'S BOOKS.

BELL'S CATHEDRAL SERIES.

"This excellent series of Cathedral handbooks which have thoroughly established their reputation as guides to the archaeological, architectural, historical, and religious stories of our cathedrals."—*Saturday Review*.

VOLUMES ON LONDON CATHEDRALS AND CHURCHES.

Post 8vo, profusely illustrated, 1s. 6d. net each.

ST. PAUL'S CATHEDRAL. An Account of the Old and New Buildings, with a short Historical Sketch. By the Rev. ARTHUR DIMOCK, M.A. With 38 Illustrations and a Plan.

WESTMINSTER ABBEY. By CHARLES HIATT. With 45 Illustrations and 2 Plans.

ST. SAVIOUR'S, SOUTHWARK. By GEORGE WORLEY. With 36 Illustrations and a Plan.

ST. BARTHOLOMEW - THE - GREAT, SMITHFIELD. A short History of the Foundation and a Description of the Fabric, and also of the Church of St. Bartholomew-the-Less. By GEORGE WORLEY. With 42 Illustrations and a Plan.

THE TEMPLE CHURCH. A Description of the Fabric and its Contents, with a short History of the Order. By GEORGE WORLEY. With 31 Illustrations and a Plan.

Full list of nearly 50 volumes sent on application.

With numerous Illustrations and a Plan.

Crown 8vo, 6s. net.

THE ART OF THE NATIONAL GALLERY.

By JULIA DE WOLF ADDISON.

"A vast amount of information is here packed into very few pages, and the book is one which may be heartily recommended to visitors to the National Collection." *Magazine of Fine Arts*.

Fcap. 8vo, 3s. 6d. net.

LONDON'S LURE.

By HELEN and LEWIS MELVILLE.

With Title-Page, Covers, and End-Papers

by M. V. WHEELHOUSE.

"Altogether, this is a delightful book; in its pages you see London with the eyes of those who have felt its enduring fascination and have sought to give expression to its inexhaustible variety."—*Daily Telegraph*.

With Specially Designed Cover. Fcap. 8vo, 5s.

POEMS FOR TRAVELLERS.

By MARY R. J. DUBOIS.

"The choice of poems is both catholic and fine... To him or her who has travelled it will always be a delightful recaller of past memories."—*Evening Standard*.

WEBSTER'S New International DICTIONARY.

NEW FROM COVER TO COVER.

CONTAINING OVER

400,000 DEFINED WORDS and PHRASES.
2,700 PAGES. 6,000 ILLUSTRATIONS.

Sir ROBERT S. BALL, LL.D. F.R.S., says:—

"It is modestly called a Dictionary, but it is really an Encyclopedia and a Dictionary combined. Nor is even this an adequate description. In a single volume there appears to be everything, from an account of the working parts of an internal combustion engine up to a description which tells us all we want about the way a Lama uses a praying wheel. Of both machines there are excellent pictures."

SEND A POSTCARD mentioning the 'Athenæum' and Messrs. Bell will forward an illustrated Booklet with specimen pages and a full description of the 'NEW INTERNATIONAL.'
